SCRD DRYCLEANERS: State Coalition for Remediation of Drycleaners Listing

The State Coalition for Remediation of Drycleaners was established in 1998, with support from the U.S. EPA Office of Superfund Remediation and Technology Innovation. It is comprised of representatives of states with established drycleaner remediation programs. Currently the member states are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

Data Release Frequency: Varies

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

POST OFFICE SITE
83 AND 93 MACOMBS PLACE
NEW YORK, NY 10039

TARGET PROPERTY COORDINATES

Latitude (North):	40.827584 - 40° 49' 39.30''
Longitude (West):	73.936617 - 73° 56' 11.82''
Universal Tranverse Mercator:	Zone 18
UTM X (Meters):	589667.9
UTM Y (Meters):	4519950.0
Elevation:	23 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5940599 CENTRAL PARK, NY
Version Date:	2013

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

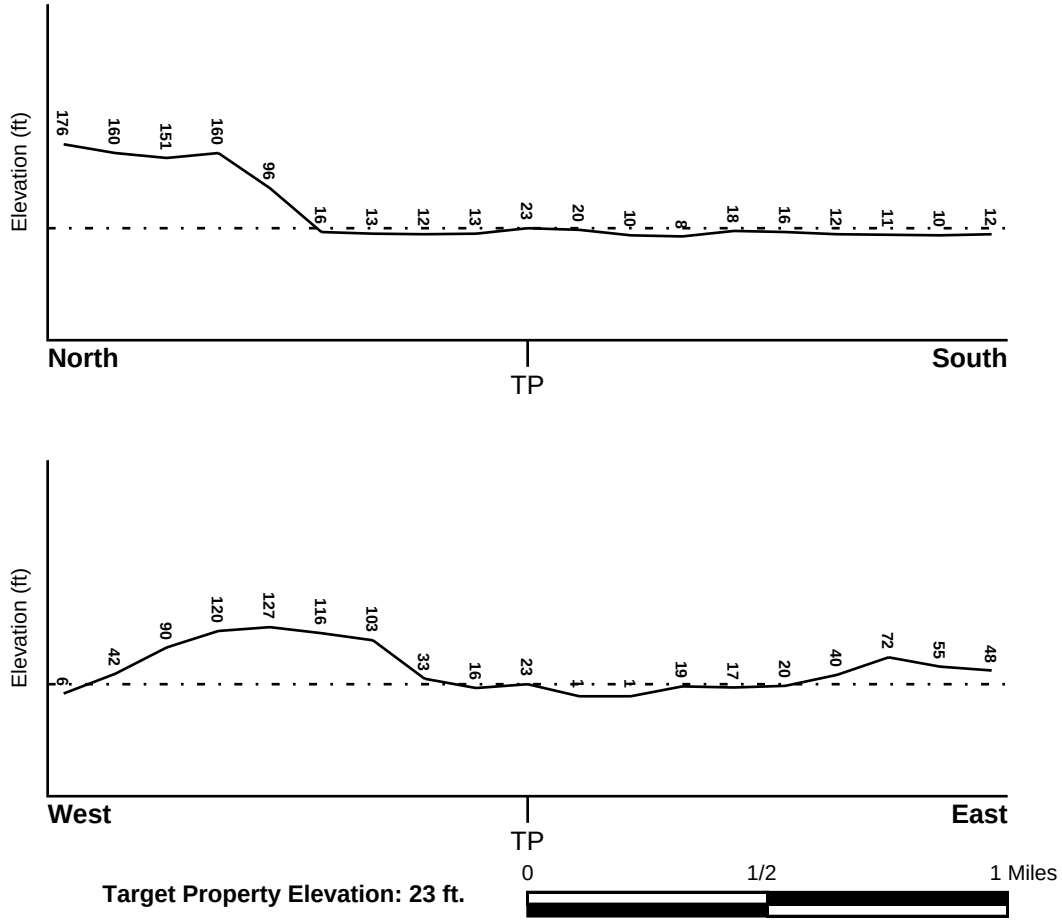
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General East

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 23 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
3604970083F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
3604970079F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
CENTRAL PARK	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT **GEOLOGIC AGE IDENTIFICATION**

Era:	Paleozoic	Category:	Stratified Sequence
System:	Ordovicias		
Series:	Lower Ordovician and Cambrian carbonate rocks		
Code:	OC *(decoded above as Era, System & Series)*		

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

FOIL Request :: W063027-122719

1 message

New York DEC Support <newyorkdec@mycusthelp.net> Fri, Dec 27, 2019 at 3:52 PM
To: "emenos@akrf.com" <emenos@akrf.com>

Dear Emmanuelle :

Thank you for your Freedom of Information Law (FOIL) request. Your request has been received and is being processed. Your request was received in this office on 12/27/2019 and given the reference number FOIL #W063027-122719 for tracking purposes. You may expect the Department's response to your request no later than **1/28/2020**.

Record Requested: **Records pertaining to: underground storage tanks (USTs), spill records, remediation sites, dump sites, soil and groundwater remediation, storage of hazardous materials, and/or hazardous materials activities for 83 Macombs Place and 93 Macombs Place (Block 2039/Lots 15 and 45) New York, NY**

You can monitor the progress of your request at the link below and you'll receive an email when your request has been completed. Again, thank you for using the FOIL Center.

RE: PUBLIC RECORDS REQUEST of 12/27/2019, Reference # W063027-122719

Date: 01/13/2020

Dear Administrator Emmanuelle Menos,

I write in response to your Freedom of Information Law (FOIL) request seeking:

> *Records pertaining to: underground storage tanks (USTs), spill records, remediation sites, dump sites, soil and groundwater remediation, storage of hazardous materials, and/or hazardous materials activities for 83 Macombs Place and 93 Macombs Place (Block 2039/Lots 15 and 45) New York, NY*

Please be advised that records identified as responsive to your request have been uploaded to DEC's online FOIL request system. Please visit our customer portal by clicking here to log into your DEC FOIL account, where you can view and download the records.

If you believe you have been unlawfully denied access to responsive records, you have the right to appeal. Such an appeal must be submitted in writing, within thirty (30) days of the date of this email, and directed to:

> FOIL Appeals Officer
> Office of General Counsel
> New York State Department of Environmental Conservation
> 625 Broadway, 14th Floor
> Albany, New York 12233-1500

Your FOIL request is now closed. If I can be of further assistance, please contact me at (718) 482-3103 and reference FOIL #W063027-122719 or simply reply to this email. Thank you.

Sincerely,

Region 2 FOIL Coordinator

The Department of Environmental Protection (DEP) has **closed** your FOIL request FOIL-2019-826-06024 for the following reasons:

- A diligent search for records responsive to your request did not locate any such records. Accordingly, your request is denied.

You may appeal the decision to deny access to material that was redacted in part or withheld in entirety by contacting the agency's FOIL Appeals Officer: foilappeals@dep.nyc.gov within 30 days.

Request Information:

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

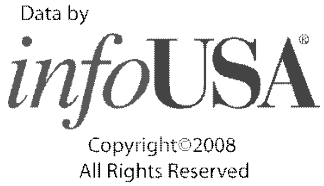
Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 200 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.



RESEARCH SUMMARY

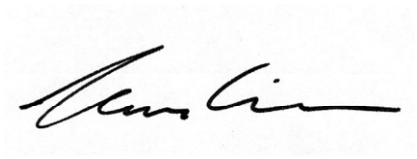
Re: Phase I Environmental Site Assessment
HCCI Open Space Site
223 West 148th Street, New York, New York 10039
AKRF Project Number: 12310

Dear Mr. Punter,

AKRF, Inc. is pleased to submit this Phase I Environmental Site Assessment Report for the above-referenced Property. This report includes the findings of a reconnaissance of the Property, an evaluation of readily available historical information and selected environmental databases and electronic records. AKRF, Inc. met the requirements of American Society for Testing and Materials (ASTM) as established by ASTM Standard E1527-13 unless noted otherwise in Section 9.0: "Limitations and Data Gaps".

We appreciate the opportunity to provide you with our services. If you should have any questions, please do not hesitate to contact us.

Sincerely,
AKRF, Inc.



Marcus Simons
Senior Vice President

EXECUTIVE SUMMARY

AKRF, Inc. (AKRF) was retained by Harlem Congregations for Community Improvement (HCCI) to perform a Phase I Environmental Site Assessment (ESA) of the HCCI Open Space Site located at 223 West 148th Street in New York, NY (Manhattan Tax Block 2034, Lots 15, 16, and 17) (the "Property"). At the time of the reconnaissance, the approximately 7,495 square-foot Property in the Bradhurst section of Manhattan was used as parkland, as shown on Figures 1 and 2. The surrounding area was primarily residential, with some parkland, commercial/retail, religious, institutional, and transit uses.

This Phase I Environmental Site Assessment was performed in conformance with ASTM Standard E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice*. Any exceptions to, or deletions from, the Standard are described in Section 8.0. The term "Recognized Environmental Condition" (REC) means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. The Standard also includes definitions of Historic REC, Controlled REC and *De Minimis* Condition.

A Tier 1 Vapor Encroachment Screen was also conducted in accordance with ASTM Standard E2600-15, Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions. The term "Vapor Encroachment Condition (VEC)" means the presence or likely presence of vapors from chemicals of concern (COC) in the subsurface of a property caused by the release of vapors on or near the property.

The assessment revealed no evidence of RECs/VECs.

Other Environmental Concerns and De Minimis Conditions

- Sanborn maps, City Directories, and regulatory database report listings identified some land uses in the area with a potential to have been associated with spills/releases: including a garage with a 1,000-gallon buried gasoline tank approximately 100 feet away and a dry cleaner approximately 200 feet away. However, releases associated with the aforementioned uses are not likely to have affected subsurface conditions at the Property.
- Buried foundation elements and demolition debris from the former Property buildings could include polychlorinated biphenyls (PCBs), asbestos containing materials (ACM), lead-based paint (LBP).
- Based on the age of the former Property buildings, the heating system might have been powered by fuel oil, but any tanks were likely located in the basements and removed as part of building demolition.

Recommendations

- Any suspect ACM, PCB-containing material, and/or LBP encountered in the subsurface should be properly characterized, managed, and disposed of in accordance with all applicable regulations prior to disturbance during future construction activities.
- If any petroleum tanks are encountered during the redevelopment, they should be closed and removed, along with any contaminated soil, in accordance with applicable requirements. Any evidence of a petroleum spill should be reported to New York State Department of Conservation (NYSDEC) and addressed in accordance with applicable regulatory requirements, including those relating to tank registration.
- During soil disturbance, all excavated soil should be managed in accordance with applicable regulatory requirements.

All soil and any other materials intended for off-site disposal should be tested in accordance with the requirements of the intended receiving facility. Transportation of material leaving the site for off-site disposal should be in accordance with federal, state and local requirements covering licensing of haulers and trucks, placarding, truck routes, manifesting, etc. If contaminated soil is discovered during soil excavation, it should be removed and disposed of in accordance with applicable regulatory requirements, including those relating to spill reporting, if necessary.

- If dewatering is required during construction, water must be discharged in accordance with New York City Department of Environmental Protection (NYCDEP) requirements.

1.0 INTRODUCTION

AKRF, Inc. (AKRF) was retained by Harlem Congregations for Community Improvement (HCCI) to perform a Phase I Environmental Site Assessment (ESA) of the HCCI Open Space Site located at 223West 148th Street in New York, NY (Manhattan Tax Block 2034, Lots 15, 16, and 17) (the "Property"). At the time of the reconnaissance, the approximately 7,495 square-foot Property in the Bradhurst section of Manhattan was used as parkland, as shown on Figures 1 and 2. The surrounding area was primarily residential, with some parkland, commercial/retail, religious, institutional, and transit uses.

The scope of services for this assessment was in conformance with ASTM Standard E1527-13 (*Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice)*. Any exceptions to, or deletions from, this practice are described in Section 8.0. The scope included the following:

- Observations of the Property (reconnaissance) to identify potential sources or indications of hazardous substances, including: aboveground storage tanks (ASTs); underground storage tanks (USTs); tank vents and fill ports; transformers and other items that could contain polychlorinated biphenyls (PCBs), drums or areas where hazardous materials were used, stored, or disposed; stained surfaces and soils; stressed vegetation, leaks, odors. In addition, neighboring properties were viewed, but only from public rights-of-way, to identify similar concerns.
- Readily available geological and groundwater (hydrogeological) information was evaluated to assist in determining the potential for contamination migration (including in soil, soil vapor, and/or groundwater) within, from, and onto the Property.
- The reconnaissance of the Property included observation of any readily visible suspect asbestos-containing materials (ACMs) and potential lead-based paint. However, no samples were collected or analyzed, and this reconnaissance provides neither definitive nor exhaustive information.
- A state database of county-level radon concentrations was used to determine typical indoor radon levels and compare them to United States Environmental Protection Agency (USEPA) guidelines.
- Historical fire insurance maps, topographic maps, and aerial photographs for the Property and nearby properties were reviewed to evaluate historical land uses.
- The following federal regulatory databases were reviewed to determine the regulatory status of the Site and properties within the ASTM-specified radii: National Priority List (NPL); Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS); Emergency Response Notification System (ERNS); Toxic Chemical Release Inventory System (TRIS); the Permit Compliance System of Toxic Wastewater Discharges (WWD); the Air Discharge Facilities Index (ADF) the USEPA Civil Enforcement Docket. The federal listing of facilities which are subject to corrective action under the Resource Conservation and Recovery Act (CORRACTS) is discussed with the State databases of RCRA listings.
- The following state regulatory databases were reviewed to determine the regulatory status of the Property, adjacent properties, and properties within a predetermined study area; the listings of hazardous material spills (SPILLS); Resource Conservation and Recovery Act Notifiers (RCRA); Chemical Bulk Storage (CBS); Solid Waste Facilities (SWF); Petroleum Bulk Storage (PBS); State Inactive Hazardous Waste Disposal Sites (SHWS); Major Oil Storage Facilities (MOSF); Brownfield Sites; and Historic Utility Sites.
- Local agency reviews including NYC Fire Department records (obtained as part of the database search), online Buildings and Finance Departments records, and Environmental Quality Review (CEQR) E Designation Sites were conducted for the Property only.

2.0 PHYSICAL SITE DESCRIPTION

Visual assessment of the Property and adjacent areas was performed on January 28, 2020 by Mr. Evan Venice of AKRF. Site access was not granted and observations were made from the public right-of-way. The weather was overcast and approximately 40° F, and the visibility generally good. The Property was inspected for the presence of stained surfaces, storage tanks, drums, leaking pipes, transformers, suspect asbestos-containing materials (ACMs), suspect lead-containing paint, distressed vegetation, and any other evidence of hazardous material usage and storage on-site. Photographs documenting the site inspection are included in Appendix A.

2.1 General Site Conditions

The Property comprised an approximately 7,495-square foot vacant lot used as parkland with concrete-tiled walkway areas and vegetated area, with benches and tables. The Property was surrounded by metal fencing with a locked gate fronting West 148th Street.

No staining or evidence of a spill/release was noted.

2.2 Topography and Hydrogeology

Topography at the Property was observed to slope gently down towards the east. Based on the United States Geological Survey (USGS) 7.5-Minute Quadrangle Maps for Central Park, NY (2013) map, the Property is approximately 23 feet above the National Geodetic Vertical Datum of 1988 (an approximation of mean sea level).

Groundwater may be perched above bedrock (presumed to be approximately 25 feet below grade based on USGS mapping) and is assumed to flow in an easterly direction (based on local topography and the assumption of discharge to the Harlem River). However, actual groundwater flow can be affected by many factors including subway tunnels, bedrock geology, and other factors beyond the scope of this study. Groundwater in Manhattan is not used as a source of drinking water.

2.3 Storage Tanks

2.3.1 Underground Storage Tanks (USTs)

During the Property inspection, no evidence, such as manways, vent pipes, or dispenser equipment, was observed that would indicate past or present USTs at the Property. Regulatory records and NYC Buildings Department (NYCDOB) listings did not indicate any USTs on the Property. However, it is possible that the former Property buildings contained UST(s) that may still be present in the Property subsurface.

Off-site USTs are discussed in Section 5.2.2.

2.3.2 Aboveground Storage Tanks (ASTs)

No evidence, such as tanks or vaults likely to contain tanks, vent pipes or fill caps was observed during the reconnaissance to indicate that ASTs are or were present. No records pertaining to ASTs were identified in the regulatory database or computerized NYCDOB records. However, it is possible that the former Property buildings contained (basement) AST(s) that may still be present in the Property subsurface.

Off-site ASTs are discussed in Section 5.2.2.

2.4 Polychlorinated Biphenyls (PCBs) and Mercury

Until 1979, polychlorinated biphenyls (PCBs), which provided beneficial insulating properties, were used in a variety of products, in particular electrical equipment such as transformers, capacitors, fluorescent light fixtures, and voltage regulators, but also in hydraulic fluids and some other products such as caulking.

Based on the age of the former buildings (constructed by 1909, according to historical land use maps), electrical equipment, caulk, hydraulic equipment, and lighting fixtures, switches and thermostats within any subsurface debris at the Property may include PCB- or mercury-containing components.

2.5 Lead-Based Paint

Lead-based paint was generally not used inside residential buildings after 1960 in NYC. Based on the age of the former buildings, lead-based paint may be present in subsurface debris at the Property. Any activities with the potential to disturb lead-based paint must be performed in accordance with the applicable Occupational Safety and Health Administration regulation (OSHA 29 CFR 1926.62—Lead Exposure in Construction).

2.6 Utilities

Consolidated Edison (ConEd) provided electricity to the Property. The Property was likely connected to the New York City municipal water and sanitary/storm sewer systems.

2.7 Waste Management and Chemical Handling

New York City Department of Sanitation is responsible for refuse collection and disposal for the Property. No bulk chemical handling activities were observed at the Property and no evidence of current or former bulk chemical storage was noted.

2.8 Radon

Radon is a colorless, odorless radioactive gas that results from the natural breakdown of uranium minerals in soil, rock, and water, which subsequently enters the atmosphere. It can concentrate in buildings, entering through cracks and other penetrations of a building foundation. Some areas are more likely to have elevated concentrations of radon than others, reflecting subsurface lithologic conditions.

The New York State Department of Health (NYSDOH) maintains a database of radon test results on a local and county level. According to NYSDOH, 124 radon tests were conducted in Manhattan in October 2019. The average basement radon level was found to be 2.07 picoCuries per liter (pCi/L), below the USEPA recommended action level of 4.0 pCi/L.

3.0 ASBESTOS-CONTAINING MATERIALS (ACM)

Asbestos refers to a group of natural minerals that provide good fire resistance and insulation. Asbestos is also commonly found in vinyl flooring, plaster, sheetrock, joint compound, ceiling tiles, roofing materials, gaskets, mastics, caulks and other products. Materials containing more than one percent asbestos are considered asbestos-containing materials (ACM). ACM are classified as either friable (i.e., more readily release fibers, such as most spray-applied fireproofing) or non-friable (such as floor tiles).

ACM may be present in any subsurface debris associated with the former Property buildings.

4.0 ADJACENT LAND USE

The Property was bounded to the north by multi-story residential buildings followed by West 149th Street; to the east by multi-story residential buildings; to the south by West 148th Street, followed by a multi-story residential building; and to the west by multi-story residential buildings. The greater surrounding area was primarily residential, with some parkland, commercial/retail, religious, institutional, and transit uses.

5.0 PROPERTY HISTORY AND RECORDS REVIEW

5.1 Prior Ownership and Usage

5.1.1 Historical Land Use maps

Historical insurance maps were reviewed for indications of uses (or other evidence) suggesting hazardous materials generation, usage, or disposal on or near the Property. Specifically, Sanborn Fire Insurance Maps from 1893, 1909, 1928, 1939, 1950, 1968, 1976-1981, 1983-1989, 1991-1996, and 2001-2005 were reviewed.

1893

The Property is shown as a portion of a large vacant lot in the south-central portion of an undeveloped block.

The surrounding area was sparsely developed with unspecified buildings and some storefronts.

1909

The Property is developed with three five-story residential buildings with basements.

The remainder of the Property block is developed with residential buildings, some with storefronts fronting 7th Avenue, including an awning shop, and on 8th Avenue, a tinsmith at 2794 8th Avenue and a paints shop. The surrounding area is more densely developed, compared to the previous map, with multi-story residential buildings and some storefronts, but some lots remain vacant. The north-adjacent block is mainly undeveloped, with unspecified structures shown on the eastern and western portions of the block, with the eastern portion labeled as dilapidated buildings. A church is noted two-blocks north of the Property. The east-adjacent block is shown with an unspecified store house fronting 7th Avenue with no further details shown on the map. The northwest-, west-, and southwest-adjacent blocks, have been developed with multi-story residential buildings with storefronts fronting 8th Avenue, including a paints shop, a bakery, a drugs store, and Chinese laundromats at 2789 8th Avenue and 2803 8th Avenue. The south-adjacent block is shown with the R.H. Macy & Co. Delivery Depot, Public School No. 90 with a vaulted yard, and multi-story residential buildings with some storefronts including a bakery, drug store, paints shop, and confectioner. A Chinese laundromat at 2532 7th Avenue and a junk yard at 2752 8th Avenue are located two blocks south of the Property.

1928

The Property, Property block, and surrounding area details are indiscernible due to lack of detail in this map.

1939

The Property remains similar to the 1909 map.

The western portion of the Property block remains similar to the 1909 map with the awning shop, tinsmith, and paints shop no longer shown. The surrounding area is more densely developed compared to the previous map with only a few lots remaining vacant. The north-adjacent block has been developed with large multi-story residential buildings and a bank on the northwestern corner. A rectory is shown as an addition to the church two blocks north of the Property.

The east-adjacent block is shown with railroad sidings and tracks with potential railway operations buildings shown on the southeast-adjacent block, with only an administration building specified. On the west-adjacent block, the Chinese laundromat at 2789 8th Avenue is no longer depicted and a confectioner is shown. On the south-adjacent block, the previously shown R.H. Macy & Co. Delivery Depot is now shown as a garage with a buried 1,000-gallon gasoline tank at 232-240 West 148th Street. Two blocks south, formerly vacant lots are developed with large multi-story residential buildings and an unspecified storage warehouse.

1950

The Property remains similar to the 1939 map.

The Property block and surrounding area remains similar to the 1939 map. The previously large unspecified warehouse located two blocks south of the Property is now shown as a film storage warehouse with film vaults at 203-209 West 146th Street. No further significant changes are noted from the 1939 map.

1968

The Property remains similar to the 1950 map.

The Property block remains similar to the 1950 map with the exception of a dry cleaner shown at 2790 8th Avenue. A paint shop is noted on the southwest-adjacent block. A playground is noted two block north of the Property. The area to the east and southeast, previously containing railroad tracks and sidings, potential railyard buildings on the 1909 to 1950 maps, is shown a 26-story residential building with storefronts on the first floor fronting 7th Avenue. No further significant changes are noted from the 1950 map.

1976-1981

The Property is shown as a smaller vacant lot (227 West 148th Street) and a portion of a larger vacant lot (223-225 West 148th Street) extending to the former east-adjacent lot.

The Property block remains similar to the 1968 map with the dry cleaner no longer shown at 2790 8th Avenue, which is shown vacant in 1977. The east-adjacent street is labeled as Adam Clayton Powell Jr. Boulevard, formerly 7th Avenue. Two blocks south, a child development center is shown. No further significant changes are noted from the 1968 map.

1983-1989

The Property remains similar to the 1968-1969 maps.

The Property block and surrounding areas remain similar to the 1976-1981 maps with some previously occupied lots shown vacant.

1991-1996

The Property remains similar to the 1983-1989 maps.

The western portion of the south-adjacent block is shown vacant. The Property block and the rest of the surrounding areas remains similar to the 1983-1989 maps.

2001-2005

The Property is remains similar to the 1991-1996 maps but is shown as a portion of a park in 2004 and 2005.

The western portion of the south-adjacent block is shown as a police department. The Property block and the rest of the surrounding areas remains similar to the 1991-1996 maps.

To summarize, historical Sanborn maps indicated that the Property was undeveloped until approximately 1909, when it was developed with three five-story residential buildings with basements. These buildings were demolished between 1968 and 1976, after which the Property remained vacant until 2004 and has since been used as parkland.

The surrounding area was sparsely developed with residential uses in the early 20th century, and was subsequently densely developed primarily with residential, commercial, institutional, automotive, and transportation uses. The Sanborn maps identified Property block land uses included a tinsmith at 2794 8th Avenue between 1909 and 1939 and a dry cleaner at 2790 8th Avenue between 1968 and 1977. Since 1893, transportation uses (railway operations) with accompanying buildings and railroad sidings and tracks were shown to the east of the Property; four Chinese laundromats were located to the northwest, west, east, and south of the Property; a delivery depot, garage with a buried gasoline tank, junkyard, a film storage warehouse were shown to the south of the Property.

5.1.2 Aerial Photographs

Since historical fire insurance maps were available for the Property (and surrounding area) and these maps included information relating to land use, aerial photographs would, most likely, not provide additional useful information relevant to the potential for recognized environmental conditions or other environmental concerns. As such, aerial photographs were not reviewed.

5.1.3 Property Tax Files and Zoning Records

Based on NYC Department of City Planning's Zoning and Land Use Map (ZoLa), the Property is zoned as R7-2 (Residential).

5.1.4 Local Street Directories

A review of historical city directories was conducted. Table 1 presents descriptions and interpretations from the historical city directory review:

Table 1
Historical City Directories

Year	Comments
1920	**Property:** Residential **Surrounding Properties:** Residential, West 148th Street Garage (232 and 240 West 148th Street), Stancourt Hand Laundry (251 West 148th Street)

2006	**Property:** Not Listed **Surrounding Properties:** Residential, Commercial
2010	**Property:** Not Listed **Surrounding Properties:** Residential, Commercial
2014	**Property:** Not Listed **Surrounding Properties:** Residential, Commercial, St Anns Parking Corp (234 West 148th Street)

The Property was listed with residential uses, including alternative addresses of 225 West 148th Street and 227 West 148th Street.

Based on the historical city directory listings, the following properties may have been associated with spills/releases:

- West 148th Street Garage (232 and 240 West 148th Street), approximately 125 feet west of the Property, between 1920 and 1934.
- Stancourt Hand Laundry (251 West 148th Street), approximately 275 feet northwest of the Property, in 1920.
- Multiple listings at 240 West 148th Street, approximately 220 feet west of the Property, including: Bradhurst Garage Inc between 1938 and 1942; Burton & Holmes Garage between 1947 and 1958; B & H Garage between 1968 and 1983; Mega Automotive in 1993; and Giselle Garage Corp. between 1998 and 2000.
- St Anns Parking Corp (234 West 148th Street), approximately 165 feet west of the Property, in 2014.

Copies of the City Directory listings are provided in Appendix C.

5.1.5 Recorded Land Title Records

Copies of title records were not provided to AKRF for review. Copies of title records were not provided to AKRF for review. A review of computerized New York City Automated City Register Information System (ACRIS) records, which included records of financial transactions involving the Property, identified no environmental liens for the Property.

5.2 Regulatory Review

Regulatory database information, as shown in Appendix D, was obtained from EDR, Inc. of Shelton, CT. The Introduction of Appendix D includes summaries of the databases searched, their radii around the Property and limitations of the data. The databases searched and associated radii were consistent with ASTM E1527-13.

5.2.1 Federal

The federal databases searched included the National Priority List (NPL); Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS); Emergency Response Notification System (ERNS); Toxic Chemical Release Inventory System (TRIS); the Permit Compliance System of Toxic Wastewater Discharges (WWD); the USEPA Civil Enforcement Docket; and the Air Discharge Facilities (ADF). The federal listing of facilities which are subject to corrective action under the Resource Conservation and Recovery Act (CORRACTS) is discussed with the State databases of RCRA listings.

The federal databases searched included the National Priority List (NPL); Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS); Superfund Enterprise Management System Archive (SEMS-ARCHIVE), Emergency Response Notification System (ERNS); Toxic Chemical Release Inventory System (TRIS); and Federal Institutional Control/Engineering Control Registries. The federal listing of facilities which are subject to corrective action under the Resource Conservation and Recovery Act (CORRACTS) is discussed with the State databases of RCRA listings.

National Priority List (NPL)

The NPL is the USEPA's compilation of some sites that probably remedial action under the Superfund Program. NPL sites can pose a significant risk of stigmatizing surrounding properties and thus impacting property values.

The Property was not identified in the NPL database.

One NPL site was identified within a one-mile radius of the Property. The Hudson River PCBs site, located approximately 4,440 feet northwest of the Property. Based on the distance from the Property, the NPL site would not be expected to have significantly affected subsurface conditions at the Property.

Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS)

CERCLIS is a compilation of sites which the USEPA has investigated, or plans to investigate, pursuant to the Superfund Act of 1980 (CERCLA). As such, some of these sites may ultimately present concerns and others may not (but could still pose a perceived threat, thus affecting property values).

No CERCLIS sites were identified within a ½-mile radius of the Property.

SEMS-ARCHIVE (Superfund Enterprise Management System Archive)

This database tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time.

No SEMS-Archive sites were identified within a ½-mile radius of the Property.

Emergency Response Notification System (ERNS)

This federal database, compiled by the Emergency Response Notification System, records and stores information on certain reported releases of petroleum and other potentially hazardous substances.

No ERNS listings were identified as potentially located on the Property in the database information.

Toxic Chemical Release Inventory System (TRIS)

The TRIS contains information reported by a variety of industries on their annual estimated releases of certain chemicals.

No TRIS sites were identified within a ⅛-mile radius of the Property.

Federal Institutional Control/Engineering Control Registries

These registries are listings of sites with engineering and institutional controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site.

The Property was not listed in the Federal Institutional Control/Engineering Control Registries database.

5.2.2 State

The state records reviewed included listings of hazardous material spills; Resource Conservation and Recovery Act (RCRA) Notifiers; Chemical Bulk Storage (CBS); Solid Waste Facilities (SWF); Petroleum Bulk Storage (PBS); State Inactive Hazardous Waste Disposal Sites (SHWS); State Hazardous Substance Waste Disposal Sites (SHSWDS); Major Oil Storage Facilities (MOSF); Brownfield Sites; Environmental Restoration Program (ERP) sites; Voluntary Cleanup Program (VCP) sites, and Brownfield Cleanup Program (BCP) sites.

New York SPILLS Database

This database includes releases reported to the NYSDEC, including tank test failures (for USTs only) and tank failures.

The Property was not listed on the Spills database. A total of 359 spills were reported within a ½-mile radius of the Property, including 71 LTANKS and 288 NY Spills sites.

Many listings were for small quantities of recovered material identified in manholes, vaults, and service boxes on the surrounding intersections or abandoned materials in vacant properties or along the road. Recovered materials include petroleum, dielectric fluid, and lead, and due to regulatory status are not anticipated to have affected the subsurface conditions at the Property.

Based on listing details, including nature of the spills, distance from the Property, and/or inferred groundwater flow direction, the spill listings would not be expected to have affected subsurface conditions at the Property. Details from all spills are included in Appendix D.

Resource Conservation and Recovery Act (RCRA) Notifiers Listings

This database lists sites that have filed notification forms regarding hazardous waste activity, including: treatment, storage and disposal facilities (TSDs); small-quantity (SQG) and large-quantity generators (LQG); and transporters regulated under RCRA. The discussion below includes any CORRACTS listings of facilities that are subject to corrective action under RCRA.

No CORRACTS sites were listed within a one-mile radius of the Property. No TSD facilities were listed within a one-half mile radius of the Property and 2 Generators/Transporters and 49 non-generators were reported within a ⅛-mile radius of the Property.

The Property was listed as a non-generator of hazardous wastes under Con Edison. The target Property address was historically listed as a conditionally exempt small-quantity generator (CESQG) in September 2009. No further details are listed but are likely related to a Con Edison utility vault in the sidewalk or street.

Based on their locations or listing details (e.g., waste type), the listed RCRA facilities, including mainly Con Ed listings associated with utility vaults, are not anticipated to have affected the Property (releases within utility vaults tend to be contained within the vaulted structures). Details of the RCRA facilities are included in Appendix D.

Chemical Bulk Storage (CBS) Database

The New York CBS is a list of facilities that store regulated non-petroleum substances in aboveground tanks with capacities greater than 185 gallons and/or in underground tanks of any size.

One CBS facility was listed within a ⅛-mile radius of the Property. Based on listing details (sodium hypochlorite used for pool water purification) and distance from the Property, , this facility is not be expected to have affected the Property subsurface. Details of the CBS facility are included in Appendix D.

Solid Waste Facilities (SWF)

This database includes certain landfills, incinerators, transfer stations, recycling centers, and other sites which manage solid waste.

No SWF sites were identified within a ½-mile radius of the Property.

Petroleum Bulk Storage (PBS) Database

This database lists facilities that registered having either aboveground or underground petroleum tanks with total storage exceeding 1,100 gallons. Facilities with more than 400,000 gallons appear on the Major Oil Storage Facilities (MOSF) database (see below).

No PBS listings were associated with the Property but 62 facilities (53 with registered ASTs and 9 with registered USTs) were identified within a ¼-mile radius. Based on listing details, distance from the Property, and/or inferred groundwater flow direction, the listed PBS facilities would not be expected to have affected the Property subsurface. Details of the PBS facilities are included in Appendix D.

State Inactive Hazardous Waste Disposal Site Registry (SHWS)

This program (also known as State Superfund) lists information regarding a variety of sites likely requiring cleanup.

Three State Inactive Hazardous Waste Disposal Sites were reported within a one-mile radius of the Property. All were at least 500 feet from the Property and are not anticipated to have affected environmental conditions at the Property.

State Hazardous Substance Waste Disposal Site Study (SHSWDS)

This database tracks certain sites that were not listed on SHWS, but may still require investigation and/or cleanup.

No SHSWDS facilities were identified within a ½-mile radius of the Property.

Major Oil Storage Facilities (MOSF) Database

These facilities have petroleum storage of 400,000 gallons or more.

No Major Oil Storage Facilities were reported within a ½-mile radius of the Property.

Environmental Restoration Program

These sites (which are generally municipally-owned) are receiving New York State funding for site investigation and remediation. Some sites in this program have known contamination, whereas others have not had sufficient investigation to determine whether contamination is present.

No ERP sites were identified within a ½-mile radius of the Property.

Voluntary Cleanup Program/Brownfield Cleanup Program

The Voluntary Cleanup Program (VCP) is a NYSDEC program for investigation and remediation of (generally) privately-owned sites. Some sites in this program have known contamination, whereas others have not had sufficient investigation to determine whether contamination is present. The Brownfield Cleanup Program (BCP) program is the successor to the Voluntary Cleanup Program. Again, some sites have known contamination, whereas others have not had sufficient investigation to determine whether contamination is present.

Three BCP sites were listed within ½-mile of the Property. One VCP site was identified within ½-mile of the Property. but all are at least 500 feet from the Property and not anticipated to have affected subsurface conditions at the Property.

New York City (E) Designation Site Listing

A New York City (E) designation for a property requires that the owner conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the New York City Office of Environmental Remediation (NYCOER) before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements).

The Property was not assigned an E-designation according to the database information.

Registered Dry Cleaners/EDR US Hist Cleaners

The registered dry cleaners database was researched to identify listings within one-quarter mile of the Site. As a supplement to the registered dry cleaners database, EDR's proprietary listing of potential drycleaner sites (listings based on the opinion of EDR) was also reviewed.

The Property was not listed in the EDR US Hist Cleaners database. Six Hist Cleaners and five Registered Dry Cleaners sites were listed within a one-half mile radius of the Site. The following Dry Cleaners were closest:

- Bakers Quality Cleaning SV*, located at 2790 8th Avenue (approximately 375 feet northwest of the Property), is listed in the Historic Cleaners database as Bakers Quality Cleaning SV* from 1969 to 1973.
- Aphrodite Cleaners, located at 2785 8th Avenue(approximately 420 feet northwest of the Property), is listed in the Historic Cleaners database as Aphrodite Cleaners from 2007 to 2009.

Based on listing details, distance from the Property (over 375 feet away) and/or inferred groundwater flow direction, these and the remaining facilities are not anticipated to have affected the Property.

5.2.3 Local Agency File Review

Records available online from the New York City Fire, Buildings, and Finance Departments were viewed for the Property. Since the records typically address a multitude of issues, the review focused on items likely to relate to the potential presence of hazardous materials, e.g., petroleum tank installation applications and permits, and records indicating prior uses. Copies of other pertinent local records and Freedom of Information Law (FOIL) requests are included in Appendix E.

Fire Department of New York City (FDNY)

The FDNY is responsible for the enforcement of local fire codes pertaining to the use and storage of flammable and hazardous materials. FDNY maintains public records with regard to tanks in six separate databases: (1) Total amount and size of existing fuel oil/heating oil; (2) Total amount and size of removed or sealed fuel oil/heating oil; (3) Total amount and size of existing buried motor vehicle tanks; (4) Total amount and size of removed or sealed motor vehicle tanks; (5) Most recent tank/piping test; and (6) History of buried tank leaks. Searches of the "total amount and size of existing fuel oil/heating tanks" and "the total amount and size of removed or sealed fuel oil/heating tanks" databases were requested in a record search form dated December 27, 2019. As of the date of this report, the FDNY has not issued a response. If issues of potential concern are identified upon receipt of a response, an addendum to this report will be prepared to discuss relevant findings.

Buildings Department (DOB)

Electronic NYCDOB records for the Property were reviewed to determine whether there were any references to buildings, tanks or other structures, property usage or inspection reports that may have indicated the presence, past use, or release of hazardous substances, wastes or petroleum products within the Property.

No pertinent environmental records were identified in the NYCDOB electronic files.

Department of City Planning (NYCDCP)

Online NYCDCP records identified no E-Designations or Restrictive Declarations (RDs) for the Property.

Department of Finance

Electronic property transaction records for the Property Block and Lot were reviewed from the New York City Department of Finance Office Automated City Register Information System (ACRIS). Deed information obtained from the ACRIS files is summarized in Table 2 below:

Table 2
Property Deed Information

223 West 148th Street (Block 2034; Lots 15 & 16):

Year	Grantor/Grantee
1970	Grantor is: Finance Administrator of The City of New York; Grantee is: The City of New York
1972	Grantor is: The City of New York; Grantee is: Reformed House of God, Inc.
1981	Grantor is: Commissioner of Finance of The City of New York; Grantee is: The City of New York

1970	Grantor is: Finance Administrator of The City of New York; Grantee is: The City of New York
1971	Grantor is: Mary Ann Karlsson; Grantee is: Harold W. Bogguess
1976	Grantor is: Finance Administrator of The City of New York; Grantee is: The City of New York
2002	Grantor is: New York City Housing Preservation & Development; Grantee is: Site 14 Housing Development Fund Corp.
2016	Grantor is: Site 14 Housing Development Fund Corp.; Grantee is: Harlem Congregations for Community Improvement, Inc.

New York City Department of Environmental Protection (NYCDEP)

AKRF sent a FOIL request pertaining to environmental records to the NYCDEP on December 27, 2019. On December 27, 2019, NYSDEC issued a response e-mail acknowledging the request. In an email dated January 8, 2020, NYCDEP indicated that no records associated with the Property were identified.

New York City Department of Health and Mental Hygiene (NYCDOHMH)

AKRF sent a FOIL request pertaining to environmental records to the NYCDOHMH on December 27, 2019. To date, no response has been provided. If issues of potential concern are noted upon receipt of the information, an addendum to this report will be created to discuss relevant findings.

New York State Department of Health (NYSDOH)

AKRF sent a FOIL request pertaining to environmental records to the NYSDOH on December 27, 2019. To date, no response has been provided. If issues of potential concern are noted upon receipt of the information, an addendum to this report will be created to discuss relevant findings.

5.2.4 Additional Environmental Record Sources

To enhance the search, ASTM requires that additional local records be reviewed (i.e., beyond those included as part of the standard database search or checked online) when, in judgment of the environmental professional, such records for the Property or any adjoining property would be reasonably ascertainable; and useful, accurate and complete in light of the objective of the records review. These records include:

- Local brownfields lists
- Local lists of landfill/solid waste disposal sites
- Local lists of hazardous waste/contaminated Sites
- Local lists of registered tanks

- Local land records (for activity use limitations)
- Records of emergency release reports
- Records of contaminated public wells

Sources for these records include:

- Fire Department
- Local/Regional Water Quality Agency
- Local Electric Utility (for PCB records)

In addition to the Local Agency File Review, AKRF sent Freedom of Information Law (FOIL) requests on December 27, 2019 to the NYSDEC to determine whether pertinent environmental records for the Property could be obtained for further review. In an email dated January 13, 2020, NYSDEC indicated that no records associated with the Property were identified.

Copies of the FOIL requests and responses are included in Appendix E.

If issues of potential concern are noted upon receipt of this information, an addendum to this report will be created to discuss relevant findings. In AKRF's judgment, no such additional local records meeting the ASTM criteria are pertinent for the Property.

6.0 USER-PROVIDED INFORMATION

In preparing this Phase I ESA, AKRF requested that the client provide any pertinent information regarding the Property, specifically:

- The reason for performing the Phase I ESA;
- Whether they were aware of any pertinent current or historic activities at or near the Property, including but not limited to: hazardous substances or petroleum, waste management practices, filling or disposal drains, septic/sewer systems, and potable and non-potable wells;
- Owner and occupant information and whether they were aware of any previous Phase I ESAs or other potentially pertinent reports, plans or information;
- Whether any *environmental liens* or *activity and land use limitations* are in place or filed or recorded against the Property or whether there was pending, threatened, ongoing or past violations, litigation or enforcement action relevant to hazardous substances or petroleum products;
- Whether they had any specialized knowledge or experience related to the Property or nearby properties (e.g., specialized knowledge of the chemicals used by this type of business);
- Whether the (anticipated) purchase price reflects that the Property is or could be contaminated; and
- Whether they were aware of commonly known or reasonably ascertainable information about environmental conditions of the Property including current/past uses of the Property and adjacent properties.

The Phase I ESA was conducted to provide preliminary environmental information as part of due diligence for the potential redevelopment of the Property. To the extent that pertinent additional information was provided, it has been summarized elsewhere in this report.

7.0 PREVIOUS STUDIES

No previous studies were provided.

8.0 VAPOR ENCROACHMENT SCREENING

A Tier 1 Vapor Encroachment Screening was conducted in accordance with ASTM Standard E2600-15, Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions. The term "Vapor Encroachment Condition" means the presence or likely presence of vapors from chemicals of concern (COC) in the subsurface of a Property caused by the release of vapors on or near the Property. The object of the Tier 1 screening is to conduct a screen for vapor encroachment based on findings from the Phase I ESA to determine if a possible VEC exists at the Property.

Based on AKRF's review of historical and regulatory database records, no potential VECs were identified.

9.0 LIMITATIONS AND DATA GAPS

This assessment met the requirements of the American Society for Testing and Materials (ASTM) as established by ASTM Standard E1527-13 at the time it was performed, with the following limitations:

- Results of this investigation are valid as of the dates on which the investigation was performed.
- There was no Property access. The inspection of the property was limited to viewing from outside of the iron fence.
- The majority of apartments (with the exception of one first-floor apartment) were occupied and not accessed.
- Interviews and user provided information were limited to those discussed in Section 6.0. To the extent that interviews were not conducted with the list of interviewees cited in the ASTM Standard (past and present owners, operators, and occupants of the Property and local government officials), AKRF does not believe that this represents a significant data gap likely to result in additional or significantly changed recognized environmental conditions or conclusions.
- The Property area history was not conducted in five-year intervals. However, sufficient information about the history of the site and surrounding area could be obtained from the available historical Sanborn and topographic maps, Buildings Department records, and interviews, and this data gap is not likely to alter the conclusions of this report.
- Agency file reviews for the Property and adjacent properties consisted of a review of standard databases and electronic records maintained by pertinent departments and agencies (summarized in Section 5.2). AKRF believes that this file review was sufficient in determining the potential for recognized environmental conditions or other environmental concerns at the Property and additional reviews beyond this are not warranted and would not likely change the conclusions of this assessment.

10.0 FINDINGS

This Phase I Environmental Site Assessment was performed in conformance with ASTM Standard E1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice. Any exceptions to, or deletions from, the Standard are described in Section 8.0. The term "Recognized Environmental Condition" (REC) means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. The Standard also includes definitions of Historic REC, Controlled REC and De Minimis Condition.

A Tier 1 Vapor Encroachment Screen was also conducted in accordance with ASTM Standard E2600-15, Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions. The term "Vapor Encroachment Condition (VEC)" means the presence or likely presence of vapors from chemicals of concern (COC) in the subsurface of a property caused by the release of vapors on or near the property.

The assessment revealed no evidence of RECs/VECs.

Other Environmental Concerns and De Minimis Conditions

- Sanborn maps, City Directories, and regulatory database report listings identified some land uses in the area with a potential to have been associated with spills/releases: including a garage with a 1,000-gallon buried gasoline tank approximately 100 feet away and a dry cleaner approximately 200 feet away. However, releases associated with the aforementioned uses are not likely to have affected subsurface conditions at the Property.
- Buried foundation elements and demolition debris from the former Property buildings could include polychlorinated biphenyls (PCBs), asbestos containing materials (ACM), lead-based paint (LBP).
- Based on the age of the former Property buildings, the heating system might have been powered by fuel oil, but any tanks were likely located in the basements and removed as part of building demolition.

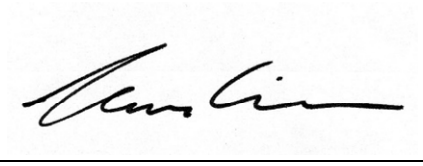
11.0 RECOMMENDATIONS

- Any suspect ACM, PCB-containing material, and/or LBP encountered in the subsurface should be properly characterized, managed, and disposed of in accordance with all applicable regulations prior to disturbance during future construction activities.
- If any petroleum tanks are encountered during the redevelopment, they should be closed and removed, along with any contaminated soil, in accordance with applicable requirements. Any evidence of a petroleum spill should be reported to New York State Department of Conservation (NYSDEC) and addressed in accordance with applicable regulatory requirements, including those relating to tank registration.
- During soil disturbance, all excavated soil should be managed in accordance with applicable regulatory requirements. All soil and any other materials intended for off-site disposal should be tested in accordance with the requirements of the intended receiving facility. Transportation of material leaving the site for off-site disposal should be in accordance with federal, state and local requirements covering licensing of haulers and trucks, placarding, truck routes, manifesting, etc. If contaminated soil is discovered during soil excavation, it should be removed and disposed of in accordance with applicable regulatory requirements, including those relating to spill reporting, if necessary.
- If dewatering is required during construction, water must be discharged in accordance with New York City Department of Environmental Protection (NYCDEP) requirements.

12.0 SIGNATURE PAGE

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312.

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Property for which the assessment was performed. We have performed all the appropriate inquiries in conformance with standards and practices set forth in 40 CFR Part 312.



Marcus Simons
Senior Vice President

13.0 QUALIFICATIONS

The purpose of this assessment was to convey a professional opinion about the potential presence or absence of contamination, or possible sources of contamination on the property, and to identify existing and/or potential environmental problems associated with the property including *Recognized Environmental Conditions* as defined in ASTM Standard E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice.*

The assessment was performed in accordance with customary principles and practices in the environmental consulting industry, and in accordance with the above-referenced ASTM Standard, except as noted otherwise in Section 8.0. It should only be used as a guide in determining the possible presence or absence of hazardous materials on the property at the time of the reconnaissance, as it is based upon the review of readily available records relating to both the property and the surrounding area, as well as a visual reconnaissance of current conditions.

This Phase I Assessment is not, and should not be construed as, a guarantee, warranty, or certification of the presence or absence of hazardous substances, which can be made only with testing, and contains no formal plans or recommendations to rectify or remediate the presence of any hazardous substances which may be subject to regulatory approval. This report is not a regulatory compliance audit.

This report is based on services performed by AKRF, Inc. professional staff and observation of the property and its surroundings. We represent that observations made in this assessment are accurate to the best of our knowledge, and that no findings or observations concerning the potential presence of hazardous substances have been withheld or amended. The research and reconnaissance have been carried to a level that meets accepted industry and professional standards. Nevertheless, AKRF and the undersigned shall have no liability or obligation to any party other than Harlem Congregations for Community Improvement and their successors or assignees, and AKRF's obligations and liabilities to the above, their successors or assignees is limited to fraudulent statements made, or grossly negligent or willful acts or omissions.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by AKRF, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OR DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT.** Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction orforecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 200 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

TARGET PROPERTY SEARCH RESULTS

The target property was identified in the following records. For more information on this property see page 8 of the attached EDR Radius Map report:

Site	Database(s)	EPA ID
CON EDISON 223 W 148TH ST E OF NEW YORK, NY 10039	FINDS Registry ID:: 110041670304 ECHO Registry ID: 110041670304	N/A
CON EDISON 223 W 148TH ST E OF NEW YORK, NY 10039	RCRA NonGen / NLR EPA ID:: NYP004193652 NJ MANIFEST EPA Id: NYP004193652 NY MANIFEST EPA ID: NYP004193652	NYP004193652

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: A review of the NPL list, as provided by EDR, and dated 10/25/2019 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

HCCI OPEN SPACE SITE
223 WEST 148TH STREET
NEW YORK, NY 10039

TARGET PROPERTY COORDINATES

Latitude (North):	40.824369 - 40° 49' 27.73''
Longitude (West):	73.939001 - 73° 56' 20.40''
Universal Tranverse Mercator:	Zone 18
UTM X (Meters):	589471.2
UTM Y (Meters):	4519590.5
Elevation:	23 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5940599 CENTRAL PARK, NY
Version Date:	2013

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

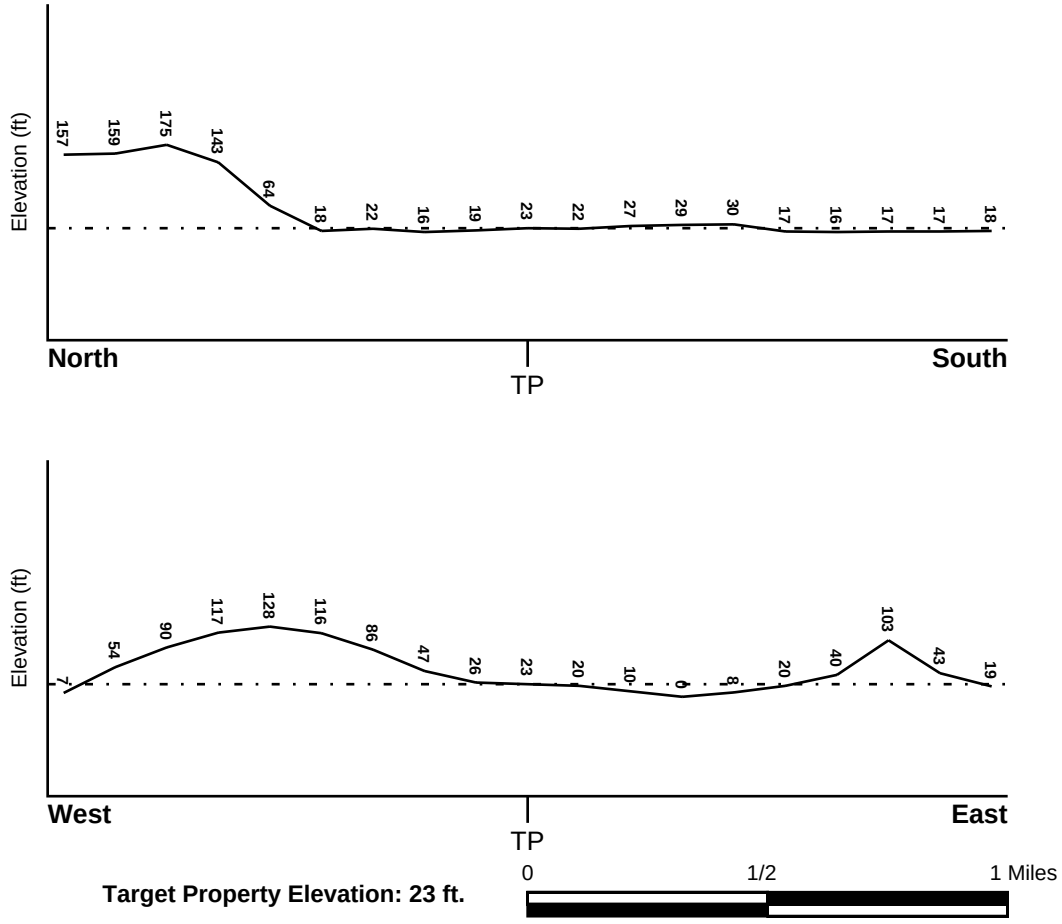
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General East

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 23 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
3604970079F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
3604970083F	FEMA FIRM Flood data
3604970087F	FEMA FIRM Flood data
3604970091F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
CENTRAL PARK	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT **GEOLOGIC AGE IDENTIFICATION**

Era:	Paleozoic	Category:	Stratified Sequence
System:	Ordovicias		
Series:	Lower Ordovician and Cambrian carbonate rocks		
Code:	OC *(decoded above as Era, System & Series)*		

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name:	URBAN LAND
Soil Surface Texture:	variable
Hydrologic Group:	Not reported
Soil Drainage Class:	Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel:	Not Reported
Depth to Bedrock Min:	> 10 inches
Depth to Bedrock Max:	> 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands

Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

FOIL Request :: W063030-122719

1 message

New York DEC Support <newyorkdec@mycusthelp.net> Fri, Dec 27, 2019 at 3:53 PM
To: "emenos@akrf.com" <emenos@akrf.com>

Dear Emmanuelle :

Thank you for your Freedom of Information Law (FOIL) request. Your request has been received and is being processed. Your request was received in this office on 12/27/2019 and given the reference number FOIL #W063030-122719 for tracking purposes. You may expect the Department's response to your request no later than **1/28/2020**.

Record Requested: **Records pertaining to: underground storage tanks (USTs), spill records, remediation sites, dump sites, soil and groundwater remediation, storage of hazardous materials, and/or hazardous materials activities for 223 West 148th Street (Block 2034, Lots 15, 16, and 17) New York, NY**

You can monitor the progress of your request at the link below and you'll receive an email when your request has been completed. Again, thank you for using the FOIL Center.

RE: PUBLIC RECORDS REQUEST of 12/27/2019, Reference # W063030-122719

Date: 01/13/2020

Dear Administrator Emmanuelle Menos,

I write in response to your Freedom of Information Law (FOIL) request seeking:

> *Records pertaining to: underground storage tanks (USTs), spill records, remediation sites, dump sites, soil and groundwater remediation, storage of hazardous materials, and/or hazardous materials activities for 223 West 148th Street (Block 2034, Lots 15, 16, and 17) New York, NY*

Please be advised that a diligent search of the files maintained by DEC produced no responsive records.

If you believe you have been unlawfully denied access to responsive records, you have the right to appeal. Any such appeal must be submitted in writing and within thirty (30) days of the date of this email. Appeals must be directed to:

> FOIL Appeals Officer
> Office of General Counsel
> New York State Department of Environmental Conservation
> 625 Broadway, 14th Floor
> Albany, NY 12233-1500

Your FOIL request is now closed. If I can be of further assistance, please contact me at (718) 482-3103 and reference FOIL #W063030-122719, or simply reply to this email. Thank you.

Sincerely,

Region 2 FOIL Coordinator

Emmanuelle Menos <emenos@akrf.com>

[OpenRecords] Request FOIL-2019-826-06027 Submitted to Department of Environmental Protection (DEP)

Mr. Malcom A. Punter
Harlem Congregations for Community Improvement
256 West 153rd Street
New York, NY 10039

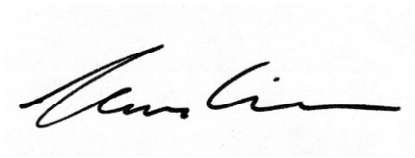
Re: Phase I Environmental Site Assessment
2521 Adam Clayton Powell Jr. Boulevard, New York, New York 10039
AKRF Project Number: 12310

Dear Mr. Punter,

AKRF, Inc. is pleased to submit this Phase I Environmental Site Assessment Report for the above-referenced Property. This report includes the findings of a reconnaissance of the Property, an evaluation of readily available historical information and selected environmental databases and electronic records. AKRF, Inc. met the requirements of American Society for Testing and Materials (ASTM) as established by ASTM Standard E1527-13 unless noted otherwise in Section 8.0: "Limitations and Data Gaps".

We appreciate the opportunity to provide you with our services. If you should have any questions, please do not hesitate to contact us.

Sincerely,
AKRF, Inc.



Marcus Simons
Senior Vice President

EXECUTIVE SUMMARY

AKRF, Inc. (AKRF) was retained by Harlem Congregations for Community Improvement (HCCI) to perform a Phase I Environmental Site Assessment (ESA) of 2521 Adam Clayton Powell Jr. Boulevard in New York, NY (Manhattan Tax Block 2015, Lot 1) (the "Property"). At the time of the reconnaissance, the approximately 4,040 square-foot Property was a vacant lot in the Central Harlem section of Manhattan, as shown on Figures 1 and 2. The surrounding area was primarily residential, with some parkland, commercial/retail, religious, institutional, and transit uses.

This Phase I Environmental Site Assessment was performed in conformance with ASTM Standard E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice*. Any exceptions to, or deletions from, the Standard are described in Section 8.0. The term "Recognized Environmental Condition" (REC) means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. The Standard also includes definitions of Historic REC, Controlled REC and *De Minimis* Condition.

A Tier 1 Vapor Encroachment Screen was also conducted in accordance with ASTM Standard E2600-15, Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions. The term "Vapor Encroachment Condition (VEC)" means the presence or likely presence of vapors from chemicals of concern (COC) in the subsurface of a property caused by the release of vapors on or near the property.

The assessment revealed evidence of the following RECs/VECs:

- The parcel east-adjacent to the Property was identified as the Mother Clara Hale Bus Depot with associated repair shops and gasoline tanks. The Mother Clara Hale Bus Depot was listed on the Resource Conservation and Recovery Act (RCRA), petroleum bulk storage (PBS), chemical bulk storage (CBS), and New York Spills (SPILLS) databases. The initial spill (Spill No. 8902374) was reported in June 1989 when four 5,000-gallon tanks were found leaking into a vault. Subsequent diesel, waste oil, and hydraulic oil spills associated with tanks, equipment, and vehicles were reported between 1991 and 2016, and were subsequently closed. Eight of these reported spills (Spill Nos. 8904241, 9106264, 9304003, 9606076, 0102743, 0513028, 0610604, and 0703983) were consolidated under the Spill No. 8902374. Petroleum-contaminated soil and groundwater [including light non-aqueous phase liquid (LNAPL)] was identified across much of the property during subsurface investigation activities. A New York State Department of Environmental Conservation (NYSDEC)-approved plan to remediate the identified contamination was incorporated into the bus depot reconstruction project, which began in 2008. Remedial measures completed following demolition of the bus depot included: removal of tanks; use of in-situ soil stabilization and grouting technologies to solidify and immobilize petroleum-contaminated soil; and the recovery of LNAPL (diesel, waste oil, and hydraulic oil). A majority of the remedial work was completed by October 2010 with continued investigation and LNAPL recovery efforts conducted through May 2017. The NYSDEC determined that the majority of the soil contamination was contained within the footprint of the property by the solidification and stabilization process and the residual groundwater contamination posed little to no risk to the public or the environment and closed Spill No. 8902374 in October 2017. Although this site was remediated to the satisfaction of the NYSDEC, there is a potential that historical uses affected the subsurface of the Property.

- Sanborn maps, City Directories, and regulatory database report listings identified land uses in close proximity to the Property including: railway operations with associated garage, repair shops, blacksmith shops, car rooms, and a substation; a bus depot with associated repair shops and gasoline tanks; dry cleaners and/or potential dry cleaners; automotive repair shops; and a radio engineering company within 200 feet of the Property. In the greater surrounding area land uses included: railway operations with associated machine shops, car/truck rooms, railroad tracks and sidings, an inspection shed, a transfer pit, a paints, oils, and varnish shop, and a blacksmith shop; a film storage warehouse; dry cleaners and/or potential dry cleaners; undertakers; gasoline filling stations; automotive repair shops, and automotive garages with buried gasoline tanks. Potential undocumented and/or documented releases associated with the aforementioned uses may have affected subsurface conditions (e.g., from potential former chemical and/or petroleum usage).

Other Environmental Concerns and De Minimis Conditions

- Buried foundation elements and demolition debris from the former Property building could include polychlorinated biphenyls (PCBs), asbestos containing materials (ACM), lead-based paint (LBP).
- Based on the age of the former Property building, the heating system may have been powered by a fuel oil UST and/or AST. The possibility exists that UST(s) and/or AST(s), and potentially associated petroleum contaminated soil, may be present in the Property subsurface.

Recommendations

- Prior to development of the Property, AKRF recommends conducting a subsurface investigation, including a geophysical survey; and the collection and laboratory analysis of soil, soil vapor, and groundwater samples (if encountered above bedrock).
- Any suspect ACM, PCB-containing material, and/or LBP encountered in the subsurface should be properly characterized, managed, and disposed of in accordance with all applicable regulations prior to disturbance during future construction activities.
- If any petroleum USTs or buried ASTs are encountered during the redevelopment, they should be closed and removed, along with any contaminated material, in accordance with applicable requirements. Any evidence of a petroleum spill should be reported to New York State Department of Conservation (NYSDEC) and addressed in accordance with applicable regulatory requirements, including those relating to tank registration.
- During soil disturbance, all excavated soil should be managed in accordance with applicable regulatory requirements. All soil and any other materials intended for off-site disposal should be tested in accordance with the requirements of the intended receiving facility. Transportation of material leaving the site for off-site disposal should be in accordance with federal, state and local requirements covering licensing of haulers and trucks, placarding, truck routes, manifesting, etc. If contaminated soil is discovered during soil excavation, it should be removed and disposed of in accordance with applicable regulatory requirements, including those relating to spill reporting, if necessary.
- If dewatering is required during construction, water must be discharged in accordance with New York City Department of Environmental Protection (NYCDEP) requirements.

1.0 INTRODUCTION

AKRF, Inc. (AKRF) was retained by Harlem Congregations for Community Improvement (HCCI) to perform a Phase I Environmental Site Assessment (ESA) of 2521 Adam Clayton Powell Jr. Boulevard in New York, NY (Manhattan Tax Block 2015, Lot 1) (the "Property"). At the time of the reconnaissance, the approximately 4,040 square-foot Property was a vacant lot in the Central Harlem section of Manhattan as shown on Figure 2. The surrounding area was primarily residential, with some parkland, commercial/retail, religious, institutional, and transit uses.

The scope of services for this assessment was in conformance with ASTM Standard E1527-13 (*Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice)*. Any exceptions to, or deletions from, this practice are described in Section 8.0. The scope included the following:

- Observations of the Property (reconnaissance) to identify potential sources or indications of hazardous substances, including: aboveground storage tanks (ASTs); underground storage tanks (USTs); tank vents and fill ports; transformers and other items that could contain polychlorinated biphenyls (PCBs), drums or areas where hazardous materials were used, stored, or disposed; stained surfaces and soils; stressed vegetation, leaks, odors. In addition, neighboring properties were viewed, but only from public rights-of-way, to identify similar concerns.
- Readily available geological and groundwater (hydrogeological) information was evaluated to assist in determining the potential for contamination migration (including in soil, soil vapor, and/or groundwater) within, from, and onto the Property.
- The reconnaissance of the Property included observation of any readily visible suspect asbestos-containing materials (ACMs) and potential lead-based paint. However, no samples were collected or analyzed, and this reconnaissance provides neither definitive nor exhaustive information.
- A state database of county-level radon concentrations was used to determine typical indoor radon levels and compare them to United States Environmental Protection Agency (USEPA) guidelines.
- Historical fire insurance maps, topographic maps, and aerial photographs for the Property and nearby properties were reviewed to evaluate historical land uses.
- The following federal regulatory databases were reviewed to determine the regulatory status of the Site and properties within the ASTM-specified radii: National Priority List (NPL); Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS); Emergency Response Notification System (ERNS); Toxic Chemical Release Inventory System (TRIS); the Permit Compliance System of Toxic Wastewater Discharges (WWD); the Air Discharge Facilities Index (ADF) the USEPA Civil Enforcement Docket. The federal listing of facilities which are subject to corrective action under the Resource Conservation and Recovery Act (CORRACTS) is discussed with the State databases of RCRA listings.
- The following state regulatory databases were reviewed to determine the regulatory status of the Property, adjacent properties, and properties within a predetermined study area; the listings of hazardous material spills (SPILLS); Resource Conservation and Recovery Act Notifiers (RCRA); Chemical Bulk Storage (CBS); Solid Waste Facilities (SWF); Petroleum Bulk Storage (PBS); State Inactive Hazardous Waste Disposal Sites (SHWS); Major Oil Storage Facilities (MOSF); Brownfield Sites; and Historic Utility Sites.
- Local agency reviews including NYC Fire Department records (obtained as part of the database search), online Buildings and Finance Departments records, and Environmental Quality Review (CEQR) E Designation Sites were conducted for the Property only.

2.0 PHYSICAL SITE DESCRIPTION

Visual assessment of the Property and adjacent areas was performed on January 28, 2020 by Mr. Evan Venice of AKRF. Site access was not granted and observations were made only from public rights-of-way. The weather was overcast and approximately 40° F, and the visibility generally good. The Property was inspected for the presence of stained surfaces, storage tanks, drums, leaking pipes, transformers, suspect asbestos-containing materials (ACMs), suspect lead-containing paint, distressed vegetation, and any other evidence of hazardous material usage and storage. Photographs documenting the site inspection are included in Appendix A.

2.1 General Site Conditions

The Property comprised an approximately 4,040-square foot vacant lot with vegetated, dirt, and gravel areas. Debris on the site visible from outside of the surrounding chain link fence included bricks and concrete, as well as limited household garbage.

The NYCTA Mother Clara Hale Bus Depot is located east-adjacent to the Property. Greater Hood Memorial A.M.E., Zion Church, located at 160 West 146th Street, was noted as having a fuel oil fill port with minor staining. No staining or evidence of a spill/release was noted in exterior areas directly around the perimeter of the Property.

2.2 Topography and Hydrogeology

Topography at the Property was observed to slope gently downwards towards the east-northeast. Based on the United States Geological Survey (USGS) 7.5-Minute Quadrangle Maps for Central Park, NY (2013) map, the Property elevation is approximately 21 feet above the National Geodetic Vertical Datum of 1988 (an approximation of mean sea level).

Groundwater may be perched above bedrock (presumed to be approximately 20 to 25 feet below grade based on USGS mapping) and is assumed to flow in an east-northeasterly direction (based on local topography and the assumption of discharge to the Harlem River). However, actual groundwater flow can be affected by many factors including subway tunnels, bedrock geology, and other factors beyond the scope of this study. Groundwater in Manhattan is not used as a source of drinking water.

2.3 Storage Tanks

2.3.1 Underground Storage Tanks (USTs)

During the Property inspection from the perimeter, no evidence, such as manways, vent pipes, or dispenser equipment, was observed that would indicate past or present USTs at the Property. Regulatory records and NYC Buildings Department (NYCDOB) listings did not indicate any USTs on the Property. However, it is possible that the former Property building contained UST(s) that may still be present in the Property subsurface.

Off-site USTs are discussed in Section 5.2.2.

2.3.2 Aboveground Storage Tanks (ASTs)

No evidence, such as tanks or vaults likely to contain tanks, vent pipes or fill caps was observed during the inspection from the perimeter to indicate that ASTs are or were present. No records pertaining to ASTs were identified in the regulatory database or computerized NYCDOB records. However, it is possible that the former Property building contained AST(s) that may still be present in the Property subsurface.

Off-site ASTs are discussed in Section 5.2.2.

2.4 Polychlorinated Biphenyls (PCBs) and Mercury

Until 1979, polychlorinated biphenyls (PCBs), which provided beneficial insulating properties, were used in a variety of products, in particular electrical equipment such as transformers, capacitors, fluorescent light fixtures, and voltage regulators, but also in hydraulic fluids and some other products such as caulking.

Based on the age of the former building (constructed by 1909, according to historical land use maps), electrical equipment, caulk, hydraulic equipment, and lighting fixtures, switches and thermostats within any subsurface debris at the Property may include PCB- or mercury-containing components.

2.5 Lead-Based Paint

Lead-based paint was generally not used inside residential buildings after 1960 in NYC. Based on the age of the former building, lead-based paint may be present in subsurface debris at the Property. Any activities with the potential to disturb lead-based paint must be performed in accordance with the applicable Occupational Safety and Health Administration regulation (OSHA 29 CFR 1926.62—Lead Exposure in Construction).

2.6 Utilities

The site is vacant and utilities do not currently service the Property. The surrounding area was supplied with electricity and natural gas by Consolidated Edison (Con Ed), and was connected to the New York City municipal water and sanitary/storm sewer systems..

2.7 Waste Management and Chemical Handling

The site is vacant; however, minimal debris and apparent dumping was observed on the Property. Debris on the site included bricks and concrete, as well as limited household garbage.

2.8 Radon

Radon is a colorless, odorless radioactive gas that results from the natural breakdown of uranium minerals in soil, rock, and water, which subsequently enters the atmosphere. It can concentrate in buildings, entering through cracks and other penetrations of a building foundation. Some areas are more likely to have elevated concentrations of radon than others, reflecting subsurface lithologic conditions.

The New York State Department of Health (NYSDOH) maintains a database of radon test results on a local and county level. According to NYSDOH, 124 radon tests were conducted in Manhattan in October 2019. The average basement radon level was found to be 2.07 picoCuries per liter (pCi/L), below the USEPA recommended action level of 4.0 pCi/L.

3.0 ASBESTOS-CONTAINING MATERIALS (ACM)

Asbestos refers to a group of natural minerals that provide good fire resistance and insulation. Asbestos is also commonly found in vinyl flooring, plaster, sheetrock, joint compound, ceiling tiles, roofing materials, gaskets, mastics, caulks and other products. Materials containing more than one percent asbestos are considered asbestos-containing materials (ACM). ACM are classified as either friable (i.e., more readily release fibers, such as most spray-applied fireproofing) or non-friable (such as floor tiles).

ACM may be present in any subsurface debris associated with the former Property building.

4.0 ADJACENT LAND USE

The Property was bounded to the north by multi-story residential buildings with ground level commercial uses; to the east by the Metropolitan Transportation Authority (MTA) Mother Clara Hale Bus Depot, followed by Malcom X Boulevard; to the south by West 146th Street, followed by residential and commercial buildings; and to the west by Adam Clayton Powell Jr. Boulevard, followed by a multi-story residential building with ground level church and commercial uses. The greater surrounding area was primarily residential, with some parkland, commercial/retail, religious, institutional, and transit uses.

5.0 PROPERTY HISTORY AND RECORDS REVIEW

5.1 Prior Ownership and Usage

5.1.1 Historical Land Use maps

Historical insurance maps were reviewed for indications of uses (or other evidence) suggesting hazardous materials generation, usage, or disposal on or near the Property. Specifically, Sanborn Fire Insurance Maps from 1893, 1909, 1922, 1928, 1939, 1950, 1968-1969, 1976-1981, 1983-1989, 1991-1996, and 2001-2005 were reviewed.

1893

The Property is shown as a portion of a large vacant lot in the southwestern corner of an undeveloped block.

The surrounding area consists of sparsely developed, gridded city blocks. The Manhattan Railway Company is shown on the southwest-adjacent block with associated repair shops fronting 7th Avenue (Adam Clayton Powell Jr. Boulevard).

1909

The Property is developed with a residential building with an unspecified store front.

The remainder of the Property block is developed on the western portion with residential buildings with unspecified storefronts fronting 7th Avenue and the eastern portion of the block is shown as the Metropolitan Station Railway Company with accompanying substation, car rooms, blacksmith shops, and repair shops. The surrounding area is more densely developed compared to the previous map, with single- to multi-story residential buildings and some storefronts, with some lots remaining vacant. To the north, a small two-story residential building is shown on the northwestern lot of the block, with the remainder of the block still undeveloped. Two blocks north, a potential railyard with accompanying railway tracks/sidings, machine shops, truck shop and car house, inspection shed, transfer pit, storehouse, blacksmith shop, and a paints, oils, and varnish shop is shown. The western block is developed with residential buildings with storefronts fronting 7th Avenue, including a Chinese laundry at 2532 7th Avenue. The northeastern block is developed with predominately residential buildings with some storefronts, including a drug store and a Public School in the eastern portion of the block. To the south, a bakery and picture frame store is located on the south-adjacent block. The previously shown Manhattan Railway Company on the southwest-adjacent block is redeveloped with residential buildings with some commercial buildings including a paints store, confectioner, drug store, and upholsterer.

1922

The Property, Property block, and surrounding area details are indiscernible due to lack of detail in this map.

1928

The Property details are indiscernible due to lack of detail in this map.

The central to eastern portion of the Property block is shown as N.Y. Railways with no further detail.

The north-adjacent block is shown as a potential extension of the railyard shown in the 1909 map, with north-adjacent railroad tracks/sidings and a partial label of "Interborough". Remaining Property block and surrounding details are indiscernible due to lack of detail in this map.

1939

The Property remains similar to the 1909 map.

The western portion of the Property block remains similar to the 1909 map. The central to eastern portion previously identified as N.Y Railways is shown as the New York Omnibus Corporation with associated garage and repair shops. To the north, the portions of the railyard shown is labeled as "Rapid Transit Company" (previously partially labeled as "Interborough") with additional repair shops, a boiler room, and railroad sidings and tracks. Formerly vacant lots on the south-adjacent block have been developed with a large recreational building with a swimming pool and sand beach, a hotel, a poultry market, a garage with two 350-gallon buried gasoline tanks at 707 Lenox Avenue, an auto repair at 703-705 Lenox Avenue, and a garage and gasoline filling station with a 550-gallon buried gasoline tank at 119-131 West 145th Avenue. An undertaker, and auto storage and service shop is noted to the southwest at 210-218 West 145th street. Some formerly vacant lots on the west-adjacent block are developed with large multi-story residential buildings and an unspecified storage warehouse.

1950

The Property remains similar to the 1939 map.

The Property block remains similar to the 1939 map with the addition of the northwestern lot now labeled as an undertaker at 2539 7th Avenue. To the north, the previously labeled "Rapid Transit Company" is labeled as "City Transit System Company" in similar configuration. The large recreational building on the south-adjacent block is shown vacant with stalls. The previously large unspecified warehouse on the west-adjacent block is now shown as a film storage warehouse with film vaults at 203-209 West 146th Street. To the southwest, the auto storage and service shop noted at 210-218 West 145th Street is now shown as a church, with the undertaker remaining. The shared gasoline filling station at 120-138 and 140-150 West 145th Street is no longer shown. No further significant changes are noted from the 1939 map.

1968-1969

The Property remains similar to the 1950 map.

The Property block remains similar to the 1950 map but the eastern portion is shown as Manhattan & Bronx Surface Transit Operating Authority (previously "New York Omnibus Corporation") with associated garage, repair shops, and six gasoline tanks with unspecified capacity. The area to the north, previously containing railroad tracks and sidings, potential railyard buildings on the 1909 to 1950 maps, is shown a 26-story residential building with storefronts on the first floor fronting 7th Avenue. The previously vacant recreational building on the south-adjacent block is shown as a church and bowling alley. No further significant changes are noted from the 1950 map.

1976-1981

The Property remains similar to the 1968-1969 maps.

The Property block remains similar to the 1968-1969 maps. The west-adjacent street is labeled as Adam Clayton Powell Jr. Boulevard, formerly 7th Avenue. On the south-adjacent block, the garage with two 350-gallon buried gasoline tanks at 707 Lenox Avenue is now shown as a portion of a large Community Center and Meeting Hall and the garage and gasoline filling station with a 550-gallon buried gasoline tank at 119-131 West 145th Avenue is now shown entirely as a gasoline filling station. On the west-adjacent block, a child development center is shown and the northeast portion of the block is shown as a 14-story residential building with storefronts on the first floor, fronting 7th Avenue. No further significant changes are noted from the 1968-1969 maps.

1983-1989

The Property remains similar to the 1976-1981 maps.

The Property block and surrounding areas remain similar to the 1976-1981 maps.

1991-1996

The Property remains similar to the 1983-1989 maps.

On the south-adjacent block, the bowling alley is shown as a garage by 1995. The Property block and the rest of the surrounding areas remains similar to the 1983-1989 maps.

2001-2005

The Property is shown as a vacant lot in 2001.

The large garage on the south-adjacent block is shown vacant by 2004. The Property block and the rest of the surrounding areas remains similar to the 1991-1996 maps.

To summarize, historical maps indicated that the Property was undeveloped until approximately 1909, when a residential building with an unspecified storefront was constructed. This building was demolished between 1996 and 2001, since when the Property has remained vacant.

The Property block had transportation uses east-adjacent to the Property including the Metropolitan Station Railway, N.Y. Railways, New York Omnibus Corporation, and Manhattan & Bronx Surface Transit Operating Authority, since 1909. The surrounding area was sparsely developed with residential uses in the early 20th century, and was subsequently densely developed primarily with residential, commercial, institutional, automotive, and transportation uses. Since 1909, automotive-related uses (including automotive repair, automotive garages, and gasoline filling stations) were shown to the south and southwest of the Property; transportation uses (railway and bus operations) with accompanying substation, machine shops, car rooms/houses, truck shop, transfer pit, blacksmith shop, and a paints, oils and varnish shops, were shown to the north, east, and southwest of the Property; a Chinese laundromat and film storage warehouse to the west of the Property; and two undertakers were located to the north and southwest of the Property.

5.1.2 Aerial Photographs

Since historical fire insurance maps were available for the Property (and surrounding area) and these maps included information relating to land use, aerial photographs would, most likely, not provide additional useful information relevant to the potential for recognized environmental conditions or other environmental concerns. As such, aerial photographs were not reviewed.

5.1.3 Property Tax Files and Zoning Records

Based on NYC Department of City Planning's Zoning and Land Use Map (ZoLa), the Property is zoned as R7-2 (Residential) and C2-4 (Commercial Overlays).

5.1.4 Local Street Directories

A review of historical city directories was conducted. Table 1 presents descriptions and interpretations from the historical city directory review:

Table 1
Historical City Directories

Year	Comments
1920	**Property:** Residential **Surrounding Properties:** Residential, Commercial, Erbograph Company (203 West 146th Street)
1923	**Property:** Residential **Surrounding Properties:** Residential, Commercial, Erbograph Company (203 West 146th Street)
1927	**Property:** Residential, Myer's Pharmacy (2523 7th Avenue) **Surrounding Properties:** Residential, Commercial, Erbograph Company (203 West 146th Street)
1931	**Property:** Residential **Surrounding Properties:** Residential, Commercial
1934	**Property:** Residential, Unity Centy of Truth (2523 7th Avenue) **Surrounding Properties:** Residential, Commercial, Dunbar Radio Engineering Company (2528 7th Avenue)
1938	**Property:** Residential **Surrounding Properties:** Residential, Commercial, Ideal Home Laundry (200 West 146th Street)
1940	**Property:** Not Listed **Surrounding Properties:** Residential, Commercial
1942	**Property:** Residential **Surrounding Properties:** Residential, Commercial, Morris Auto Supplies (2519 7th Avenue), Ideal Home Laundry (200 West 146th Street)
1947	**Property:** Residential, Ula's Beauty Salon (2523 7th Avenue) **Surrounding Properties:** Residential, Commercial, Levy Ben Tires (2519 7th Avenue), Morris Auto Supplies Paint and Hardware Company (2519 7th Avenue), The Old Rose Cleaners & Dyers (2528 7th Avenue)
1950	**Property:** Residential, Doyles Liquor Shop (2521 7th Avenue), Ula's Beauty Salon (2523 7th Avenue) **Surrounding Properties:** Residential, Commercial, Levy Ben Tires (2519 7th Avenue), Morris Auto Supplies Paint and Hardware Company (2519 7th Avenue), The Old Rose Cleaners & Dyers (2528 7th Avenue)

1956	**Property:** Residential, Doyles Liquor Shop (2521 7th Avenue), Ula's Beauty Salon (2523 7th Avenue) **Surrounding Properties:** Residential, Commercial, Levy Ben Tires (2519 7th Avenue), Morris Auto Supplies Paint and Hardware Company (2519 7th Avenue), S & J Cleaners (2524 7th Avenue), The Old Rose Cleaners & Dyers (2528 7th Avenue)
1958	**Property:** Residential, Ula's Beauty Salon (2523 7th Avenue) **Surrounding Properties:** Residential, Commercial, Levy Ben Tires (2519 7th Avenue), Morris Auto Supplies Paint and Hardware Company (2519 7th Avenue), S & J Cleaners (2524 7th Avenue), The Old Rose Cleaners & Dyers (2528 7th Avenue)
1961	**Property:** Not Listed **Surrounding Properties:** Residential, Commercial, The Old Rose Cleaners & Dyers (2528 7th Avenue)
1963	**Property:** Residential, Ula's Beauty Salon (2523 7th Avenue) **Surrounding Properties:** Residential, Commercial, Religious, Aid Stores Inc. Auto Accessories (2519 7th Avenue), Levy Ben Tires (2519 7th Avenue), Morris Auto Supplies (2519 7th Avenue), S & J Cleaners (2524 7th Avenue), The Old Rose Cleaners & Dyers (2528 7th Avenue)
1968	**Property:** Residential, Carver Wine & Liquor Inc. (2521 7th Avenue), Ula's Beauty Salon (2523 7th Avenue) **Surrounding Properties:** Residential, Commercial, Religious, S & J Cleaners (2524 7th Avenue), The Old Rose Cleaners & Dyers (2528 7th Avenue)
1973	**Property:** Residential, Doyles Liquor Shop (2521 7th Avenue) **Surrounding Properties:** Residential, Commercial, Religious, The Old Rose Cleaners & Dyers (2528 7th Avenue)
1978	**Property:** Residential, Doyles Liquor Shop (2521 7th Avenue) **Surrounding Properties:** Residential, Commercial, Religious, The Old Rose Cleaners & Dyers (2528 7th Avenue)
1983	**Property:** Residential, Doyles Liquor Shop (2521 7th Avenue) **Surrounding Properties:** Residential, Commercial, Religious, Gus Cleaners (2528 7th Avenue)
1988	**Property:** Residential, Doyles Liquor Shop (2521 7th Avenue) **Surrounding Properties:** Residential, Commercial, Religious
1993	**Property:** Doyles Liquor Shop (2521 7th Avenue) **Surrounding Properties:** Residential, Commercial, Religious
1998	**Property:** Doyles Liquor Shop (2521 7th Avenue) **Surrounding Properties:** Residential, Commercial, Religious
2000	**Property:** Not listed **Surrounding Properties:** Residential, Commercial
2005	**Property:** Not listed **Surrounding Properties:** Residential, Commercial
2006	**Property:** Not listed **Surrounding Properties:** Residential, Commercial
2010	**Property:** Not listed **Surrounding Properties:** Residential, Commercial, Religious
2014	**Property:** Not listed **Surrounding Properties:** Residential, Commercial, Religious

The Property was listed with residential and commercial uses, including alternative addresses of 2523 Adam Clayton Powell, Jr. Boulevard, 2521 7th Avenue, 2523 7th Avenue, and 167 West 146th Street.

Based on the historical city directory listings, the following properties may have affected the subsurface conditions beneath the Property:

- Erbograph Company (203 West 146th Street), the site of a film storage warehouse approximately 260 feet northwest of the Property, between 1920 and 1927.
- Dunbar Radio Engineering Company (2528 7th Avenue), approximately 165 feet northwest of the Property, in 1934.
- Ideal Home Laundry (200 West 146th Street), approximately 255 feet west of the Property, between 1938 and 1942.
- Morris Auto Supplies Paint and Hardware Company, Aid Stores Inc. Auto Accessories and Levy Ben Tires (2519 7th Avenue), approximately 65 feet south of the Property, between 1942 and 1963.
- S & J Cleaners (2524 7th Avenue), approximately 150 feet west of the Property, between 1956 and 1978.
- The Old Rose Cleaners & Dyers (2528 7th Avenue), approximately 165 feet northwest of the Property, between 1947 and 1968.
- Gus Cleaners (2528 7th Avenue), approximately 165 feet northwest of the Property, in 1983.

Copies of the City Directory listings are provided in Appendix C.

5.1.5 Recorded Land Title Records

Copies of title records were not provided to AKRF for review. Copies of title records were not provided to AKRF for review. A review of computerized New York City Automated City Register Information System (ACRIS) records, which included records of financial transactions involving the Property, identified no environmental liens for the Property.

5.2 Regulatory Review

Regulatory database information, as shown in Appendix D, was obtained from EDR, Inc. of Shelton, CT. The Introduction of Appendix D includes summaries of the databases searched, their radii around the Property and limitations of the data. The databases searched and associated radii were consistent with ASTM E1527-13.

5.2.1 Federal

The federal databases searched included the National Priority List (NPL); Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS); Emergency Response Notification System (ERNS); Toxic Chemical Release Inventory System (TRIS); the Permit Compliance System of Toxic Wastewater Discharges (WWD); the USEPA Civil Enforcement Docket; and the Air Discharge Facilities (ADF). The federal listing of facilities which are subject to corrective action under the Resource Conservation and Recovery Act (CORRACTS) is discussed with the State databases of RCRA listings.

The federal databases searched included the National Priority List (NPL); Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS); Superfund Enterprise Management System Archive (SEMS-ARCHIVE), Emergency Response Notification System (ERNS); Toxic Chemical Release Inventory System (TRIS); and Federal Institutional Control/Engineering Control Registries.

The federal listing of facilities which are subject to corrective action under the Resource Conservation and Recovery Act (CORRACTS) is discussed with the State databases of RCRA listings.

National Priority List (NPL)

The NPL is the USEPA's compilation of some sites that probably remedial action under the Superfund Program. NPL sites can pose a significant risk of stigmatizing surrounding properties and thus impacting property values.

No NPL sites were identified within a one-mile radius of the Property.

Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS)

CERCLIS is a compilation of sites which the USEPA has investigated, or plans to investigate, pursuant to the Superfund Act of 1980 (CERCLA). As such, some of these sites may ultimately present concerns and others may not (but could still pose a perceived threat, thus affecting property values).

No CERCLIS sites were identified within a ½-mile radius of the Property.

SEMS-ARCHIVE (Superfund Enterprise Management System Archive)

This database tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time.

No SEMS-Archive sites were identified within a ½-mile radius of the Property.

Emergency Response Notification System (ERNS)

This federal database, compiled by the Emergency Response Notification System, records and stores information on certain reported releases of petroleum and other potentially hazardous substances.

No ERNS listings were identified as potentially located on the Property in the database information.

Toxic Chemical Release Inventory System (TRIS)

The TRIS contains information reported by a variety of industries on their annual estimated releases of certain chemicals.

No TRIS sites were identified within a ⅛-mile radius of the Property.

Federal Institutional Control/Engineering Control Registries

These registries are listings of sites with engineering and institutional controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site.

The Property was not listed in the Federal Institutional Control/Engineering Control Registries database.

5.2.2 State

The state records reviewed included listings of hazardous material spills; Resource Conservation and Recovery Act (RCRA) Notifiers; Chemical Bulk Storage (CBS); Solid Waste Facilities (SWF); Petroleum Bulk Storage (PBS); State Inactive Hazardous Waste Disposal Sites (SHWS); State Hazardous Substance Waste Disposal Sites (SHSWDS); Major Oil Storage Facilities (MOSF); Brownfield Sites; Environmental Restoration Program (ERP) sites; Voluntary Cleanup Program (VCP) sites, and Brownfield Cleanup Program (BCP) sites.

New York SPILLS Database

This database includes releases reported to the NYSDEC, including tank test failures (for USTs only) and tank failures.

The Property was not listed on the Spills database. A total of 346 spills were reported within a ½-mile radius of the Property, including 75 LTANKS and 271 NY Spills sites.

Most listings were for small quantities of recovered material identified in manholes, vaults, and service boxes on the surrounding intersections or abandoned materials in vacant properties or along the road. Recovered materials include petroleum, dielectric fluid, and lead, and due to regulatory status are not anticipated to have affected the subsurface conditions at the Property. The following listings are notable:

- Numerous spills were reported at Mother Clara Hale Bus Depot (identified with several addresses), which is east-adjacent to the Property and encompasses almost the entire Property block. The initial spill (Spill No. 8902374) was reported in June 1989 when four 5,000-gallon tanks were found leaking into a vault. Subsequent diesel, waste oil, and hydraulic oil spills associated with tanks, equipment, and vehicles were reported between 1991 and 2016, and were subsequently closed. Eight of these reported spills (Spill Nos. 8904241, 9106264, 9304003, 9606076, 0102743, 0513028, 0610604, and 0703983) were consolidated under the Spill No. 8902374. Petroleum-contaminated soil and groundwater [including light non-aqueous phase liquid (LNAPL)] was identified across much of the property during subsurface investigation activities. A NYSDEC-approved plan to remediate the identified contamination was incorporated into the bus depot reconstruction project, which began in 2008. Remedial measures completed following demolition of the bus depot included: removal of tanks; use of in-situ soil stabilization and grouting technologies to solidify and immobilize petroleum-contaminated soil; and the recovery of LNAPL (diesel, waste oil, and hydraulic oil). A majority of the remedial work was completed by October 2010 with continued investigation and LNAPL recovery efforts conducted through May 2017. The NYSDEC determined that the majority of the soil contamination was contained within the footprint of the property by the solidification and stabilization process and the residual groundwater contamination posed little to no risk to the public or the environment. The NYSDEC closed Spill No. 8902374 in October 2017. This facility is also listed in the RCRA, PBS, and CBS databases.

- Numerous spills were reported at 200 West 146th Street, approximately 115 feet southwest of the Property. Four of these reported spills (Spill Nos. 9904971, 9905161, 0407205 and 0410034) were closed and consolidated under the source Spill No. 0502555. The initial spill (Spill No. 9904971) was reported in July 1999 when a broken pipe boiler was leaking into the basement and No. 2 fuel oil infiltrated the west-adjacent property. Soil borings revealed volatile organic compound (VOC) and semivolatile organic compound (SVOC) contamination. Soil was excavated in the source basement and product/sheen was observed. Groundwater was observed at 1 to 2 feet below ground surface in the basement. Monitoring wells were installed and sampled after remedial excavation. Based on groundwater sampling results, the NYSDEC closed Spill No. 0502555 in October 2010. This facility is also listed in the PBS database.
- Spill No. 1000175 was reported in April 2010 at the Erbograph Apartments, located at 203-209 West 146th Street, approximately 260 feet northwest of the Property. According to the listing, a 5,000-gallon UST and apparent soil contamination were discovered during excavation. According to the listing, the tank was removed and the soil was remediated. A closure report was submitted to the NYSDEC and the spill was closed in October 2010. This facility is also listed in the BCP, SHWS, and PBS databases.
- Spill No. 0751061 was reported in November 2007 at ExxonMobil, located at 150-154 West 145th Street, approximately 400 feet south of the Property. According to the listing, the spill was reported based on the results of a subsurface investigation conducted at an adjacent property (2495 Adam Clayton Powell) which discovered free product in groundwater monitoring wells (Spill No. 0706608). Spill No. 0706608 was closed in March 2019 and consolidated into Spill No. 0751061, when ExxonMobil was identified as the source of this contamination. A subsurface investigation revealed petroleum-impact soil and groundwater. A geophysical survey and test pits were conducted and a total of twelve 550-gallon USTs were discovered and believed to be the source of contamination. In October 2008, enhanced fluid recovery (EFR) and vapor extraction events were conducted and removed approximately 273 gallons of product, 814 pounds of vapor, and 20,000 gallons of petroleum contaminated groundwater. An internal combustion engine was used to burn the vapors being collected. In October 2009, five 4000-gallon tanks were removed to facilitate the removal of the 550-gallon tank bed and approximately 300 tons of contaminated soil were left in-place due to proximity to the station building. A combination of soil vapor extraction (SVE), air sparging (AS), and a product recovery treatment systems were used from April 2011 to October 2015, when the spill was closed due to groundwater monitoring revealing no rebound in dissolved-phase contamination and down-gradient groundwater being clean. This address is also listed in the PBS database under a different facility name.

Based on listing details, including nature of the spills, distance from the Property, and/or inferred groundwater flow direction, the remaining spill listings would not be expected to have affected subsurface conditions at the Property. Details from all spills are included in Appendix D.

Resource Conservation and Recovery Act (RCRA) Notifiers Listings

This database lists sites that have filed notification forms regarding hazardous waste activity, including: treatment, storage and disposal facilities (TSDs); small-quantity (SQG) and large-quantity generators (LQG); and transporters regulated under RCRA. The discussion below includes any CORRACTS listings of facilities that are subject to corrective action under RCRA.

No CORRACTS sites were listed within a one-mile radius of the Property. No TSD facilities were listed within a one-half mile radius of the Property and 2 Generators/Transporters and 60 non-generators were reported within a ⅛-mile radius of the Property. The Property was not listed as a RCRA generator (or non-generator) of hazardous wastes. The following RCRA listing represents a potential to have affected the Property:

- The Mother Clara Hale Bus Depot located at 721 Lenox Avenue, east-adjacent to the Property, was listed in the RCRA database (EPA ID No. NYD980642219). This facility is listed as an SQG in 2007, 2006, and 1999, and an LQG in 1994, 1992, 1990, and 1982. The listing indicates that the waste stream included cadmium, lead, and waste oils. No violations were noted. This facility is also listed on the PBS, CBS, and NY Spills databases.

Based on their locations or listing details (i.e., waste type), the remaining listed RCRA facilities, including Con Ed listings associated with utility vaults near the Property, are not anticipated to have affected the Property (releases within utility vaults tend to be contained within the vaulted structures).

Chemical Bulk Storage (CBS) Database

The New York CBS is a list of facilities that store regulated non-petroleum substances in aboveground tanks with capacities greater than 185 gallons and/or in underground tanks of any size.

Two CBS facilities were listed within a ⅛-mile radius of the Property. The following CBS listing represents a potential to have affected the Property:

- The Mother Clara Hale Bus Depot located at 721 Lenox Avenue, east-adjacent to the Property, was listed the CBS database (Facility ID No. 2-000294). This facility is listed with one in-service 2,000-gallon ethylene glycol AST installed in December 1985. This facility is also listed on the RCRA, PBS, and NY Spills databases.

Based on listing details, distance from the Property, and/or inferred groundwater flow direction, the other CBS facility would not be expected to have affected the Property subsurface. Details of the CBS facilities located within ⅛ mile of the Property are included in Appendix D.

Solid Waste Facilities (SWF)

This database includes certain landfills, incinerators, transfer stations, recycling centers, and other sites which manage solid waste.

One Solid Waste Facility was identified within a ½-mile radius of the Property.

Based on its distance from the Property (over 2,500 feet away), the listed SWF facility would not be expected to have affected the Property subsurface. Details of the SWF facility are included in Appendix D.

Petroleum Bulk Storage (PBS) Database

This database lists facilities that registered having either aboveground or underground petroleum tanks with total storage exceeding 1,100 gallons. Facilities with more than 400,000 gallons appear on the Major Oil Storage Facilities (MOSF) database (see below).

No PBS listings were associated with the property but 47 facilities were identified within a ⅛-mile radius. Details of the nearest PBS facilities to the Property are included in Table 2 below:

Table 2
Petroleum Bulk Storage Facility Data

Location	Capacity (gallons)	Product Stored	Status	Distance/Direction from Property
Mother Clara Hale Bus Depot 721 Lenox Avenue New York, NY	1 x 550 UST 1 x 4,000 UST 3 x 10,000 UST 1 x 8,000 UST 2 x 1,000 UST 4 x 10,000 UST 1 x 5,000 UST 1 x 2,500 UST 1 x 1,000 UST 1 x 1,000 UST 2 x 4,000 AST 1 x 1,080 AST 1 x 4,000 AST 1 x 2,000 AST 6 x 5,000 AST 1 x 280 AST 1 x 8,000 AST 1 x 7,500 AST 1 x 1,000 AST 8 x 250 AST 1 x 4,000 AST 1 x 330 AST	Unspecified Waste Oil Diesel No. 2 Fuel Oil Waste Oil Diesel Diesel Motor Oil Waste Oil Transmission Fluid Gasoline Lube Oil Lube Oil Lube Oil Diesel Diesel No. 2 Fuel Oil No. 2 Fuel Oil Waste Oil Unspecified Unspecified Diesel	Closed-In-Place Closed-In-Place Closed-Removed Closed-Removed Closed-Removed In Service In Service In Service In Service In Service Closed-Removed Closed-Removed Closed-In-Place Closed-Removed Closed-In Place Closed-In Place Closed-In-Place Closed-Removed Closed-Removed Converted to Non-Regulated Use Closed-In-Place In Service	East-adjacent

	1 x 280 AST	No. 2 Fuel Oil	In Service	
	1 x 275 AST	Motor Oil	Closed-Removed	

Notes: AST - aboveground storage tank
UST - underground storage tank

Based on listing details, distance from the Property, and/or inferred groundwater flow direction, the remaining listed PBS facilities would not be expected to have affected the Property subsurface. Details of the additional PBS facilities located within ¼ mile of the Property are included in Appendix D.

State Inactive Hazardous Waste Disposal Site Registry (SHWS)

This program (also known as State Superfund) lists information regarding a variety of sites likely requiring cleanup.

Five State Inactive Hazardous Waste Disposal Sites were reported within a one-mile radius of the Property including the following:

- The Erbograph Apartments located at 203-209 West 146th Street, approximately 260 feet northwest of the Property, was the site of a former film storage warehouse that was listed on the SHWS database (Site No. 57156) for soil contamination including polycyclic aromatic hydrocarbons (PAHs) and metals (related to historic fill), soil vapor contamination of VOCs, and interior debris piles containing asbestos and lead paint. Due to the proximity and limited details of the listing, the Film Storage Warehouse is considered a REC. This facility is also listed in the BCP, CBS, PBS, and NY Spills databases.

Based on listing details and distance from the Property this and the the remaining facilities are not anticipated to have affected environmental conditions at the Property.

State Hazardous Substance Waste Disposal Site Study (SHSWDS)

This database tracks certain sites that were not listed on SHWS, but may still require investigation and/or cleanup.

No SHSWDS facilities were identified within a ½-mile radius of the Property.

Major Oil Storage Facilities (MOSF) Database

These facilities have petroleum storage of 400,000 gallons or more.

No Major Oil Storage Facilities were reported within a ½-mile radius of the Property.

Environmental Restoration Program

These sites (which are generally municipally-owned) are receiving New York State funding for site investigation and remediation. Some sites in this program have known contamination, whereas others have not had sufficient investigation to determine whether contamination is present.

No ERP sites were identified within a ½-mile radius of the Property.

Voluntary Cleanup Program/Brownfield Cleanup Program

The Voluntary Cleanup Program (VCP) is a NYSDEC program for investigation and remediation of (generally) privately-owned sites. Some sites in this program have known contamination, whereas others have not had sufficient investigation to determine whether contamination is present. The Brownfield Cleanup Program (BCP) program is the successor to the Voluntary Cleanup Program. Again, some sites have known contamination, whereas others have not had sufficient investigation to determine whether contamination is present.

Three BCP sites were listed within ½-mile of the Property. Two VCP sites were identified within ½-mile of the Property.

Based on listing details and distance from the Property, the facilities (including the Erbograph facility discussed ,previously) are not anticipated to have affected environmental conditions at the Property.

New York City (E) Designation Site Listing

A New York City (E) designation for a property requires that the owner conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the New York City Office of Environmental Remediation (NYCOER) before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements).

The Property was not assigned an E-designation according to the database information.

Registered Dry Cleaners/EDR US Hist Cleaners

The registered dry cleaners database was researched to identify listings within one-quarter mile of the Site. As a supplement to the registered dry cleaners database, EDR's proprietary listing of potential drycleaner sites (listings based on the opinion of EDR) was also reviewed.

The Property was not listed in the EDR US Hist Cleaners database. Two Hist Cleaners and three Registered Dry Cleaners sites were listed within a one-half mile of the Site. The following have some potential to have affected the Property:

- Garden Organic Dry Cleaners located at 2541 7th Avenue, approximately 180 feet northwest of the Property, is listed as a registered dry cleaner (Facility ID No. 2-6203-00189), effective as of May 2013. The last inspection date listed is April 2013. The listing indicates that the facility uses DF2000 synthetic hydrocarbon solvent. This address is also listed in the NY Spills database for a minor spill.
- Ideal Cleaners, located at 2510 7th Avenue(approximately 190 feet southwest of the Property), is listed in the Historic Cleaners database as Ideal Cleaners from 1991 to 2002.

Based on listing details and distance from the Property (over 490 feet away), the remaining facilities are not anticipated to have affected the Property.

5.2.3 Local Agency File Review

Records available online from the New York City Fire, Buildings, and Finance Departments were viewed for the Property. Since the records typically address a multitude of issues, the review focused on items likely to relate to the potential presence of hazardous materials, e.g., petroleum tank installation applications and permits, and records indicating prior uses. Copies of other pertinent local records and Freedom of Information Law (FOIL) requests are included in Appendix E.

Fire Department of New York City (FDNY)

The FDNY is responsible for the enforcement of local fire codes pertaining to the use and storage of flammable and hazardous materials. FDNY maintains public records with regard to tanks in six separate databases: (1) Total amount and size of existing fuel oil/heating oil; (2) Total amount and size of removed or sealed fuel oil/heating oil; (3) Total amount and size of existing buried motor vehicle tanks; (4) Total amount and size of removed or sealed motor vehicle tanks; (5) Most recent tank/piping test; and (6) History of buried tank leaks. Searches of the "total amount and size of existing fuel oil/heating tanks" and "the total amount and size of removed or sealed fuel oil/heating tanks" databases were requested in a record search form dated December 27, 2019. As of the date of this report, the FDNY has not issued a response. If issues of potential concern are identified upon receipt of a response, an addendum to this report will be prepared to discuss relevant findings.

Buildings Department (DOB)

Electronic NYCDOB records for the Property were reviewed to determine whether there were any references to buildings, tanks or other structures, property usage or inspection reports that may have indicated the presence, past use, or release of hazardous substances, wastes or petroleum products within the Property.

No pertinent environmental records were identified in the NYCDOB electronic files.

Department of City Planning (NYCDCP)

Online NYCDCP records identified no E-Designations or Restrictive Declarations (RDs) for the Property.

Department of Finance

Electronic property transaction records for the Property Block and Lot were reviewed from the New York City Department of Finance Office Automated City Register Information System (ACRIS). Deed information obtained from the ACRIS files is summarized in Table 3 below:

Table 3
Property Deed Information

Year	Grantor/Grantee
1980	Grantor is: Bensem Realty Corp.; Grantee is: 167 W 146th St Realty
1988	Grantor is: 167 W 146th St Realty; Grantee is: Ok J. Coi
1989	Grantor is: Commissioner of Finance of The City of New York; Grantee is: The City of New York

1993	Grantor is: Commissioner of Finance of The City of New York; Grantee is: The City of New York

New York City Department of Environmental Protection (NYCDEP)

AKRF sent a FOIL request pertaining to environmental records to the NYCDEP on December 27, 2019. On December 27, 2019, NYSDEC issued a response e-mail acknowledging the request. In an email dated January 8, 2020, NYCDEP indicated that no records associated with the Property were identified.

New York City Department of Health and Mental Hygiene (NYCDOHMH)

AKRF sent a FOIL request pertaining to environmental records to the NYCDOHMH on December 27, 2019. To date, no response has been provided. If issues of potential concern are noted upon receipt of the information, an addendum to this report will be created to discuss relevant findings.

New York State Department of Health (NYSDOH)

AKRF sent a FOIL request pertaining to environmental records to the NYSDOH on December 27, 2019. To date, no response has been provided. If issues of potential concern are noted upon receipt of the information, an addendum to this report will be created to discuss relevant findings.

5.2.4 Additional Environmental Record Sources

To enhance the search, ASTM requires that additional local records be reviewed (i.e., beyond those included as part of the standard database search or checked online) when, in judgment of the environmental professional, such records for the Property or any adjoining property would be reasonably ascertainable; and useful, accurate and complete in light of the objective of the records review. These records include:

- Local brownfields lists
- Local lists of landfill/solid waste disposal sites
- Local lists of hazardous waste/contaminated Sites
- Local lists of registered tanks
- Local land records (for activity use limitations)
- Records of emergency release reports
- Records of contaminated public wells

Sources for these records include:

- Fire Department
- Local/Regional Water Quality Agency
- Local Electric Utility (for PCB records)

In addition to the Local Agency File Review, AKRF sent Freedom of Information Law (FOIL) requests on December 27, 2019 to the NYSDEC to determine whether pertinent environmental records for the Property could be obtained for further review. In an email dated January 13, 2020, NYSDEC indicated that no records associated with the Property were identified.

Copies of the FOIL requests and responses are included in Appendix D.

If issues of potential concern are noted upon receipt of this information, an addendum to this report will be created to discuss relevant findings. In AKRF's judgment, no such additional local records meeting the ASTM criteria are pertinent for the Property.

6.0 USER-PROVIDED INFORMATION

In preparing this Phase I ESA, AKRF requested that the client provide any pertinent information regarding the Property, specifically:

- The reason for performing the Phase I ESA;
- Whether they were aware of any pertinent current or historic activities at or near the Property, including but not limited to: hazardous substances or petroleum, waste management practices, filling or disposal drains, septic/sewer systems, and potable and non-potable wells;
- Owner and occupant information and whether they were aware of any previous Phase I ESAs or other potentially pertinent reports, plans or information;
- Whether any *environmental liens* or *activity and land use limitations* are in place or filed or recorded against the Property or whether there was pending, threatened, ongoing or past violations, litigation or enforcement action relevant to hazardous substances or petroleum products;
- Whether they had any specialized knowledge or experience related to the Property or nearby properties (e.g., specialized knowledge of the chemicals used by this type of business);
- Whether the (anticipated) purchase price reflects that the Property is or could be contaminated; and
- Whether they were aware of commonly known or reasonably ascertainable information about environmental conditions of the Property including current/past uses of the Property and adjacent properties.

The Phase I ESA was conducted to provide preliminary environmental information as part of due diligence for the potential redevelopment of the Property. To the extent that pertinent additional information was provided, it has been summarized elsewhere in this report.

7.0 PREVIOUS STUDIES

No previous studies were provided.

8.0 VAPOR ENCROACHMENT SCREENING

A Tier 1 Vapor Encroachment Screening was conducted in accordance with ASTM Standard E2600-15, Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions. The term "Vapor Encroachment Condition" means the presence or likely presence of vapors from chemicals of concern (COC) in the subsurface of a Property caused by the release of vapors on or near the Property. The object of the Tier 1 screening is to conduct a screen for vapor encroachment based on findings from the Phase I ESA to determine if a possible VEC exists at the Property.

Based on AKRF's review of historical and regulatory database records, potential VECs were identified based on the Tier 1 Vapor Encroachment Screening, as follows:

- The parcel east-adjacent to the Property was identified as the Mother Clara Hale Bus Depot with associated repair shops and gasoline tanks. The Mother Clara Hale Bus Depot was listed on the Resource Conservation and Recovery Act (RCRA), petroleum bulk storage (PBS), chemical bulk storage (CBS), and New York Spills (SPILLS) databases. The initial spill (Spill No. 8902374) was reported in June 1989 when four 5,000-gallon tanks were found leaking into a vault. Subsequent diesel, waste oil, and hydraulic oil spills associated with tanks, equipment, and vehicles were reported between 1991 and 2016, and were subsequently closed. Eight of these reported spills (Spill Nos. 8904241, 9106264, 9304003, 9606076, 0102743, 0513028, 0610604, and 0703983) were consolidated under the Spill No. 8902374. Petroleum-contaminated soil and groundwater [including light non-aqueous phase liquid (LNAPL)] was identified across much of the property during subsurface investigation activities. A New York State Department of Environmental Conservation (NYSDEC)-approved plan to remediate the identified contamination was incorporated into the bus depot reconstruction project, which began in 2008. Remedial measures completed following demolition of the bus depot included: removal of tanks; use of in-situ soil stabilization and grouting technologies to solidify and immobilize petroleum-contaminated soil; and the recovery of LNAPL (diesel, waste oil, and hydraulic oil). A majority of the remedial work was completed by October 2010 with continued investigation and LNAPL recovery efforts conducted through May 2017. The NYSDEC determined that the majority of the soil contamination was contained within the footprint of the property by the solidification and stabilization process and the residual groundwater contamination posed little to no risk to the public or the environment and closed Spill No. 8902374 in October 2017. Although this site was remediated to the satisfaction of the NYSDEC, there is a potential that historical uses associated with railyard operations (which included a substation, car rooms, blacksmith shops, repair shops, garages, and gasoline tanks) affected the subsurface of the Property.
- Sanborn maps, City Directories, and regulatory database report listings identified land uses in close proximity to the Property including: railway operations with associated garage, repair shops, blacksmith shops, car rooms, and a substation; a bus depot with associated repair shops and gasoline tanks; dry cleaners and/or potential dry cleaners; automotive repair shops; and a radio engineering company within 200 feet of the Property. In the greater surrounding area land uses included: railway operations with associated machine shops, car/truck rooms, railroad tracks and sidings, an inspection shed, a transfer pit, a paints, oils, and varnish shop, and a blacksmith shop; a film storage warehouse; dry cleaners and/or potential dry cleaners; undertakers; gasoline filling stations; automotive repair shops, and automotive garages with buried gasoline tanks. Potential undocumented and/or documented releases associated with the aforementioned uses may have affected subsurface conditions (i.e., from potential former chemical and/or petroleum usage).

9.0 LIMITATIONS AND DATA GAPS

This assessment met the requirements of the American Society for Testing and Materials (ASTM) as established by ASTM Standard E1527-13 at the time it was performed, with the following limitations:

- Results of this investigation are valid as of the dates on which the investigation was performed.
- There was no Property access. The inspection of the property was limited to viewing from outside of the chain link fence.
- Interviews and user provided information were limited to those discussed in Section 6.0. To the extent that interviews were not conducted with the list of interviewees cited in the ASTM Standard (past and present owners, operators, and occupants of the Property and local government officials), AKRF does not believe that this represents a significant data gap likely to result in additional or significantly changed recognized environmental conditions or conclusions.
- The Property area history was not conducted in five-year intervals. However, sufficient information about the history of the site and surrounding area could be obtained from the available historical Sanborn and topographic maps, Buildings Department records, and interviews, and this data gap is not likely to alter the conclusions of this report.
- Agency file reviews for the Property and adjacent properties consisted of a review of standard databases and electronic records maintained by pertinent departments and agencies (summarized in Section 5.2). AKRF believes that this file review was sufficient in determining the potential for recognized environmental conditions or other environmental concerns at the Property and additional reviews beyond this are not warranted and would not likely change the conclusions of this assessment.

10.0 CONCLUSIONS AND RECOMMENDATIONS

This Phase I Environmental Site Assessment was performed in conformance with ASTM Standard E1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice. Any exceptions to, or deletions from, the Standard are described in Section 8.0. The term "Recognized Environmental Condition" (REC) means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. The Standard also includes definitions of Historic REC, Controlled REC and De Minimis Condition.

A Tier 1 Vapor Encroachment Screen was also conducted in accordance with ASTM Standard E2600-15, Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions. The term "Vapor Encroachment Condition (VEC)" means the presence or likely presence of vapors from chemicals of concern (COC) in the subsurface of a property caused by the release of vapors on or near the property.

The assessment revealed evidence of the following RECs/VECs:

- The parcel east-adjacent to the Property was identified as the Mother Clara Hale Bus Depot with associated repair shops and gasoline tanks. The Mother Clara Hale Bus Depot was listed on the Resource Conservation and Recovery Act (RCRA), petroleum bulk storage (PBS), chemical bulk storage (CBS), and New York Spills (SPILLS) databases. The initial spill (Spill No. 8902374) was reported in June 1989 when four 5,000-gallon tanks were found leaking into a vault. Subsequent diesel, waste oil, and hydraulic oil spills associated with tanks, equipment, and vehicles were reported between 1991 and 2016, and were subsequently closed. Eight of these reported spills (Spill Nos. 8904241, 9106264, 9304003, 9606076, 0102743, 0513028, 0610604, and 0703983) were consolidated under the Spill No. 8902374. Petroleum-contaminated soil and groundwater [including light non-aqueous phase liquid (LNAPL)] was identified across much of the property during subsurface investigation activities. A New York State Department of Environmental Conservation (NYSDEC)-approved plan to remediate the identified contamination was incorporated into the bus depot reconstruction project, which began in 2008. Remedial measures completed following demolition of the bus depot included: removal of tanks; use of in-situ soil stabilization and grouting technologies to solidify and immobilize petroleum-contaminated soil; and the recovery of LNAPL (diesel, waste oil, and hydraulic oil). A majority of the remedial work was completed by October 2010 with continued investigation and LNAPL recovery efforts conducted through May 2017. The NYSDEC determined that the majority of the soil contamination was contained within the footprint of the property by the solidification and stabilization process and the residual groundwater contamination posed little to no risk to the public or the environment and closed Spill No. 8902374 in October 2017. Although this site was remediated to the satisfaction of the NYSDEC, there is a potential that historical uses affected the subsurface of the Property.
- Sanborn maps, City Directories, and regulatory database report listings identified land uses in close proximity to the Property including: railway operations with associated garage, repair shops, blacksmith shops, car rooms, and a substation; a bus depot with associated repair shops and gasoline tanks; dry cleaners and/or potential dry cleaners; automotive repair shops; and a radio engineering company within 200 feet of the Property. In the greater surrounding area land uses included: railway operations with associated machine shops, car/truck rooms, railroad tracks and sidings, an inspection shed, a transfer pit, a paints, oils, and varnish shop, and a blacksmith shop; a film storage warehouse; dry cleaners and/or potential dry cleaners; undertakers; gasoline filling stations; automotive repair shops, and automotive garages with buried gasoline tanks. Potential undocumented and/or documented

releases associated with the aforementioned uses may have affected subsurface conditions (e.g., from potential former chemical and/or petroleum usage).

Other Environmental Concerns and De Minimis Conditions

- Buried foundation elements and demolition debris from the former Property building could include polychlorinated biphenyls (PCBs), asbestos containing materials (ACM), lead-based paint (LBP).
- Based on the age of the former Property building, the heating system may have been powered by a fuel oil UST and/or AST. The possibility exists that UST(s) and/or AST(s), and potentially associated petroleum contaminated soil, may be present in the Property subsurface.

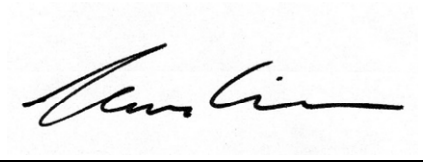
Recommendations

- Prior to development of the Property, AKRF recommends conducting a subsurface investigation, including a geophysical survey; and the collection and laboratory analysis of soil, soil vapor, and groundwater samples (if encountered above bedrock).
- Any suspect ACM, PCB-containing material, and/or LBP encountered in the subsurface should be properly characterized, managed, and disposed of in accordance with all applicable regulations prior to disturbance during future construction activities.
- If any petroleum USTs or buried ASTs are encountered during the redevelopment, they should be closed and removed, along with any contaminated material, in accordance with applicable requirements. Any evidence of a petroleum spill should be reported to New York State Department of Conservation (NYSDEC) and addressed in accordance with applicable regulatory requirements, including those relating to tank registration.
- During soil disturbance, all excavated soil should be managed in accordance with applicable regulatory requirements. All soil and any other materials intended for off-site disposal should be tested in accordance with the requirements of the intended receiving facility. Transportation of material leaving the site for off-site disposal should be in accordance with federal, state and local requirements covering licensing of haulers and trucks, placarding, truck routes, manifesting, etc. If contaminated soil is discovered during soil excavation, it should be removed and disposed of in accordance with applicable regulatory requirements, including those relating to spill reporting, if necessary.
- If dewatering is required during construction, water must be discharged in accordance with New York City Department of Environmental Protection (NYCDEP) requirements.

11.0 SIGNATURE PAGE

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312.

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Property for which the assessment was performed. We have performed all the appropriate inquiries in conformance with standards and practices set forth in 40 CFR Part 312.



Marcus Simons
Senior Vice President

12.0 QUALIFICATIONS

The purpose of this assessment was to convey a professional opinion about the potential presence or absence of contamination, or possible sources of contamination on the property, and to identify existing and/or potential environmental problems associated with the property including *Recognized Environmental Conditions* as defined in ASTM Standard E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice.*

The assessment was performed in accordance with customary principles and practices in the environmental consulting industry, and in accordance with the above-referenced ASTM Standard, except as noted otherwise in Section 8.0. It should only be used as a guide in determining the possible presence or absence of hazardous materials on the property at the time of the reconnaissance, as it is based upon the review of readily available records relating to both the property and the surrounding area, as well as a visual reconnaissance of current conditions.

This Phase I Assessment is not, and should not be construed as, a guarantee, warranty, or certification of the presence or absence of hazardous substances, which can be made only with testing, and contains no formal plans or recommendations to rectify or remediate the presence of any hazardous substances which may be subject to regulatory approval. This report is not a regulatory compliance audit.

This report is based on services performed by AKRF, Inc. professional staff and observation of the property and its surroundings. We represent that observations made in this assessment are accurate to the best of our knowledge, and that no findings or observations concerning the potential presence of hazardous substances have been withheld or amended. The research and reconnaissance have been carried to a level that meets accepted industry and professional standards. Nevertheless, AKRF and the undersigned shall have no liability or obligation to any party other than Harlem Congregations for Community Improvement and their successors or assignees, and AKRF's obligations and liabilities to the above, their successors or assignees is limited to fraudulent statements made, or grossly negligent or willful acts or omissions.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by AKRF, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 200 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/24/2019 has revealed that there is 1 RCRA-LQG site within approximately 0.125 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
CON EDISON - SERVICE EPA ID:: NYP005038118	140 W 146TH ST	SE 0 - 1/8 (0.036 mi.)	B24	52

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/24/2019 has revealed that there is 1 RCRA-SQG site within approximately 0.125 miles of the target property.

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 08/12/2019 has revealed that there are 5 NY SHWS sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 10/09/2019 has revealed that there is 1 NY SWF/LF site within approximately 0.5 miles of the target property.

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 11/11/2019 has revealed that there are 75 NY LTANKS sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/24/2019 has revealed that there are 60 RCRA NonGen / NLR sites within approximately 0.125 miles of the target property.

NY VAPOR REOPENED: "Vapor intrusion" refers to the process by which volatile chemicals move from a subsurface source into the indoor air of overlying or adjacent buildings. The subsurface source can either be contaminated groundwater or contaminated soil which releases vapors into the pore spaces in the soil. Improvements in analytical techniques and knowledge gained from site investigations in New York and other states has led to an increased awareness of soil vapor as a medium of concern and of the potential for exposures from the soil vapor intrusion pathway. Based on this additional information, New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

A review of the NY VAPOR REOPENED list, as provided by EDR, and dated 12/01/2018 has revealed that there is 1 NY VAPOR REOPENED site within approximately 1 mile of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 6 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 2 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Doronova. AD 09/2008: Tried to locate the contact person - Jon Robertson, phone 212-491-8486 and Titan Development without success. All phone numbers are no longer in service. AD 12/04/2008: Called and spoke with Paul of Phoenix, he promised to look through their files for some information on this site. Found on the Internet information regarding Titan Development, Inc. phone: (716)772-5510 (possible RP).

THE COMMUNITY PRESERVATION CORP. (Continued) **S106469060**

Left a message. Found on ACRIS information regarding The Community Preservation Corp. (CPC), which listed in its files as an owner of the site. Address: 28 East 28th Street 9th floor New York, NY 10016 phone: (212)869-5300 fax: (212)659-0102 Called and spoke with Human Resources department of CPC. Explained the situation and left my contact information. Later received a call from Ms. Kristy Seyfert of CPC, she confirmed that CPC owns the property, she asked me to send them DEC spill report and an official request. Will send an Outstanding Violation letter. AD 12/05/2008: Issued and sent the Outstanding Violation Letter. Also sent a copy of the letter and DEC Spill Report via fax to CPC. DL PDF copy to eDocs. A response to the letter should be received till January 5, 2009. AD 02/19/2009: Received a phone call from K. Seyfert. She said that she did not received the letters. Sent these letters again via fax and e-mail: From: Ainura Doronova [mailto:axdorono@gw.dec.state.ny.us] Sent: Thursday, February 19, 2009 3:26 PM To: Kristy Seyfert <kseyfert@communityp.com Subject: 2515 Seventh Ave., New York NYSDEC Spill No. 0401623 and 262Alexander Ave., Bronx NYSDEC Spill No. 0301707 Dear Ms. Seyfert: Attached please find copies of the letters, regarding above-referenced sites, which were sent to you previously, but were not received by your company according to your statement. Please be advised that response is time sensitive. To receive a deadline postponement you should submit an official request. Sincerely, Ainura Doronova Environmental Engineer later received an e-mail from her saying: Thank you I am in receipt of the attachment and will address the situation ASAP. Kristy Seyfert Loan Analyst The Community Preservation Corporation 28 E. 28th Street, 9th Fl. New York, NY 10016 T: (212) 869-5300 x560 F: (212) 659-0102 kseyfert@communityp.com 05/18/2009: Did not receive any response yet. called and left a message to Ms. Seyfert. AD 06/01/2009: received an e-mail from N. Recchia of EEA saying: Ainura, Hello Ainura, We need your help to try and close this spill case. I would like to know exactly what DEC needs to close this spill but we have little info. I was contacted by the current owner of this property and The Community Preservation Corporation to work on closing this spill case file. Apparently this building underwent a complete renovation in 2004. The property owner only knows that the contractor who was working on the project removed a tank in the basement of the building. He has no information regarding the cause of the spill and neither does CPC who retained the contractor to do the work. Apparently this contractor has no left no records or information and nobody can contact them anymore. The only info they gave me was your letter date December 2008 (attached). I went online to the DEC Spill Incidents Database Search (attached) and found limited info. According to your letter DEC requires a summary of cleanup activities, manifests, post excavation samples etc. If I can't get this information would DEC accept us performing soil test borings in the vicinity of the former tank to check existing soil quality conditions? I could develop a work plan that DEC could review before the work is done. Thanks for your help with this spill file. Our client would like to close out this spill case as soon as possible but we understand DEC need the data and info to do that. Sincerely Yours, Nicholas J. Recchia, C.P.G. Vice President, Senior Hydrogeologist EEA, Inc. 55 Hilton Avenue Garden City, NY 11530 phone (516) 746-4400 ext. 12 fax (516) 746-4432 cell:(516) 395-8763 nrecchia@eeaconsultants.com www.eeaconsultants.com AD 06/03/2009: called and left a message to Mr. Recchia of EEA. Lated spoke with Mr. Recchia, sent him NYSDEC

THE COMMUNITY PRESERVATION CORP. (Continued) **S106469060**

FOIL Spill Report. AD 06/10/2009: Received an e-mail from Mr. Recchia of EEA saying: Ainura, Hope all is well. I have another piece of this puzzle and it now makes more sense. I have recieved a Phase I summary report from 2000 performed by ATC Environmental which is attached to this message. The report indicates that the Tank in question was an Above Ground 2,000-Gallon Heating Oil Tank. The site inspection at the time indicated that there was no leakage, spills or staining observed around the tank. The report also indicated that the tank was to be removed by the building renovation contractor. I was told there were problems with the contractor hired to do the renovation one of which resulted in this spill file being opened due to poor construction managment. Apparently Pheonix was hired to cleanup the 3-gallons of oil that spilled (according to the online spill description). I'm trying to locate and get a copy of the Phoenix report. If I cannot get this report what would be your requirements be to close out this spill file? Sincerely Yours, Nicholas J. Recchia, C.P.G. Vice President, Senior Hydrogeologist EEA, Inc. Called to DEP to speak with Azellia Maddox (caller) regadring the cause of the spill. She is currently on a sick leave. Will review the submitted report. DL pdf copy to eDocs. Called and spoke with Paul of Phoenix and asked him to look through their records for any info regarding cleanup Phoenix performed at the site. Later received a call from Paul, he said that an invoice for the cleanup was found. Paul participated in cleanup at the site. The drum in the building's basement was leaking. Phoenix responded to call and transfered product from leaking drum to a new one and secured the drums on site. They could not remove the drum because it was located in the basement. Received copy of the invoice via fax. DL to eDocs. Called and left a message to Mr. Recchia of EEA. AD 06/11/2009: Called and spoke with Mr. Recchia. Since the cause of the spill is known (leaking drum), I asked him to prepare a letter report summarizing all info, and to attach recently taken pictures of the basement. AD 08/2009: Called and left a message to Mr. Recchia regarding a letter report submission. AD 09/01/2009: Called and spoke with A. Recchia of EEA. He said that report will be submitted till September 15, 2009. AD 09/30/2009: Received an e-mail from Mr. Recchia of EEA saying: Ainura, I wanted to let you know that I have prepared the report earlier this month for this project however we are having trouble getting paid from our client. As soon as we get paid I will have the report sent to you. Sincerely Yours, Nicholas J. Recchia, C.P.G. Vice President, Senior Hydrogeologist EEA, Inc. 55 Hilton Avenue Garden City, NY 11530 phone (516) 746-4400 ext. 12 fax (516) 746-4432 cell:(516) 395-8763 nrecchia@eeaconsultants.com www.eeaconsultants.com 10/02/2009: Called and spoke with K. Seyfert of CPC regarding the submission of the report. She referred me to Ms. Jill Belli - contact person for this case 9ext. 626). Called her and left a message. AD 10/12/2009: Received an e-mail from N. Recchia of EEA saying: Ainura, Attached please find our report for this spill. Sorry it took so long but we had to wait for our client to pay for it before it went out. Thank You. Nicholas J. Recchia, C.P.G. Vice President, Senior Hydrogeologist EEA, Inc. 55 Hilton Avenue Garden City, NY 11530 phone (516) 746-4400 ext. 12 fax (516) 746-4432 cell:(516) 395-8763 nrecchia@eeaconsultants.com www.eeaconsultants.com DL it to eDocs. Will review. AD 11/23/2009: Reviewed the letter report. The spill originally was reported because of leaking hydraulic oil drum. the spill was cleaned by Phoenix Env. in June of 2004. Empty drum was removed from the basement. basement

THE COMMUNITY PRESERVATION CORP. (Continued) **S106469060**

floor is concrete and there are no drains. Recent pictures of the basement were submitted. There is not any oil staining on the floor. AD 12/01/2009: Discussed the site with J. Kolleeny of DEC. The decision was to close the case. Will send a letter. AD 12/02/2009: Issued and sent a letter with spill closure approval to K. Seyfert of CPC. Dl to eDocs. Case closed. AD "

DER Facility ID: 293220
DEC Memo: "6/3/04 tipple closed this spill number and referred it back to spill # 0407205 8/12/05 Sharif reopened the case since this is the source of the spill to the adjacent property at 210 146th Street. Spill# 0407205 & 9904971 represent the same location and source of spillage (both are closed). 09.15.05 SR// I spoke with Mr. Ray Kahn of ESPO today. He informed me they are taking away the ply wood floor, cleaning the dirt and repaired the leak to prevent any water seeeping through the next door wall. I advised him to provide DEC the work plan including soil boring works to be performed. 11.10.05 Sharif- Rec'd investigation report done by ESPL.Couple of spill no.s were called in before at this address. Those are-spill no. 0407205,9905161, 9904971. 12/19/05: Case reassigned to Andersen. Reviewed subsuface investigation report prepared by ESPL. VOCs and sVOCs found in soil borings. Proposed excavation. Sent approval letter. 4/19/06: Spoke with Ray Kahn of ESPL. The RP is being uncooperative. Sent letter with stipulation agreement requiring implementation of the approved RAP. Stipulation due back by May 31, 2006. Sion Rohayegh phone number: 516-848-0550 5/23/06: Spoke with Rosario Reyes (212-923-4840). Scheduled site visit for 6/5/06 to discuss possible off-site source from adjacent building, and required future work. 5/26/06: Spoke to Ray Kahn. Rescheduled site visit for 6/6/06. Oil was found in the neighbors basement. The tank was fixed and retested, but the contamination has not been remediated. The building is in shody condition, there was a raw sewage spill in the basement and an old boiler was recently removed. 5/30/06: Left a message with Rasario Reyes secretary to confirm site visit. 6/6/06: Site inspection by NYSDEC Andersen. When the spill was called in a water leak from the building to the south flooded the basement and caused the fuel oil to infiltrate that building to the west. The neighbors wall and the adjacent floor has since been cleaned. The basement of the building to the west is four feet lower than the site. Temporary walls and plywood floor that was on top of the concrete slab in the basement were removed. Endpoint samples will be taken after excavation. 7/14/06: Received phone call from Ray Kahn. Floor needs to be removed and then excavation will be scheduled. 8/21/06: Spoke with Ray Kahn (212-330-7501). The basement was prepared for excavation. Excavation will be scheduled soon. He will contact me when a date is scheduled. 9/18/06: Spoke to Ray Kahn. Excavation has not been scheduled yet. The owner was out of town. He will followup with the owner and call me back. 10/6/06: Spoke to Ray Kahn. Excavation has not been scheduled yet. He will call the owner and get back to me. 10/16/06: Left voice message with Rosario Reyes to followup on overdue stipulation agreement and excavation. 10/24/06: Sent stipulation agreement overdue letter. May need to refer to legal. 1/25/07: Excavation scheduled for 1/30/07. 2/6/07: Spoke to Arash at ESPL (office 212-330-7501, cell 516-315-3231). Excavation postponed due to weather. 2/23/07: Site visit. Excavation of three rooms in the basement. Product (sheen) in all excavations. Groundwater at 1-2 feet bgs. Liquid will be pumped out. Downgradient wells installed on the sidewalk. 3/6/07: Spoke to Ray Kahn. Recovery wells will be installed in the excavations, and then the excavations backfilled. Monitoring wells will be installed on the sidewalk. This

RESIDENTIAL (Continued) **S106971964**

will occur early next week. 3/28/07: Arash is no longer employed by ESPL. Emailed Ray Kahn (rkahn@espl.com) to followup on well installation. 4/4/07: Left message with secretary for Ray Kahn. He will be in the office tomorrow. 4/5/07: Spoke to Ray Kahn. Four wells installed in the building. Will send email with site plan. 5/2/07: Emailed Ray Kahn. Requested an update report with well sampling data and site plan. 5/29/07: Left message with Ray Kahn's secretary to return call. 5/31/07: Left phone message with Ray Kahn's secretary to followup. 6/14/07: Spoke to Ray Kahn. The four on-site wells will be gauged and sampled for sVOCs. A well may be installed in the sidewalk. 7/26/07: Emailed Ray Kahn to followup on the status of groundwater gauging and sampling. 8/15/07: Spoke to Ray Kahn. The owner has not paid him for work completed. He will contact the owner and call me back. 8/31/07: Referred to legal. 9/12/07: Received phone message from Ray Kahn. Wells will be sampled and report submitted (phone: 212-363-3775, cell phone: 917-939-7366). 10/18/07: Received groundwater sampling report. MW-2 was dry. Monitoring wells MW 1, 3, 4 were sampled. Napthalene present in MW1 at 45 ppb. 10/19/07: NFA issued."

DEC Memo: "This site had the same problem several years ago. Case has been assigned to Sawyer for investigation. 12/9/04 - Sawyer - Talked Donald Mack today there seems to still be a problem. I have sent by mail and fax a modified Contaminated Soil letter to: Maurice McKenzie Royal Management LLC 507 West 186th Street New York, New York 10033 I also talked to a Jeanette with Royal Management 212 923 4840 and tried to get them to get a clean up crew out to the site. They have fail to repsond. 12/10/04 - Sawyer - ECO Lochner responded to the site and gained access into the basement and confirmed a leak with a sheen from next door. 12/22/04 - Sawyer - Called Royal Management and let them know that they were going to have some ticketing problems for not trying to rectify this problem. 1/11/05 - Sawyer - Called Royal Management many times to try to gain access to the basement of building 200 W 146th Street with ECO Lochner. ECO suggested we go to the management office up on 186th Street. Once there he explained that no work was to be performed before we gained access to the boiler and tank rooms of that building. They were to schedule meeting with Maurice Mckenzie asap. 1/14/05 - Sawyer - Finally met Maurice McKenzie at 1100 hrs to gain access. There were numerous violations from the start not to mention they were to have already performed a subsurface investigation, as in the letter dated 12/9/04, that had not been done. There was no PBS registration posted and none could be produced. There was a running sump pump with an oil sheen on top in the far left hand room(reported to DEP #994306). The floors in both of the rooms that butt up against the 210 wall were of newer painted wooden sheet board. There was a newer tank 3000 gallon #2 fuel oil tank in a vaulted tank room on the right. The basement also contained a newly cemented door to a large room on left side which was the old tank room/boiler room but there was so much garbage in the room I could only see connection pipes at the top near the ceiling. I told Maurice to clean the room out and to get borings in that area and the full length of the wall leading to 210 W 146th Street. There was new paint everywhere in this basement. 03/04/05 - Sawyer - Mr. Mack of 210 W 146th Street notified me today that they have had a another oil release on 3/2/05. Mrs. Ruiz of Royal Mangement was to have hired Tri Stae Environemtal, but I have not heard anythig form them confirming this. 6/3/05 MT// A tank test failure was called in by Ray Kahn for this address on 6/2/05//new spill # is 05-02555 has been closed out and referred to this spill #.// Spill Transferred from Sawyer to Tipple \\\\ 6/13/05 Tipple spoke with Ray Kahn//leaking tank to be taken out of service ASAP after which an investigation/remediation is to proceed//// 8/12/05 Sharif visited the site yesterday.Sewer pipeline at 200 W 146th Street basement broke,liquid dirt flooded allover the place and seeped through the wall impacting adjacent building’s basement. There is evidence of old oil spill underneath the wooden besement floor. It looked like black, oily contaminated stuff along the oil line that runs underneath the wood floor.Building owner Mr. Sion Sohayegh Hired ESPO (Ray Kahn, 212-330-7501, cell: 917-939-7366) to fix the tank and pipeline. Mr. Sion will do the initial clean up this week end followed by extensive remedial work soon. 10.07.05 SR// I called both Ray Kahn (consultant)and Sion Sohayegh, left message for both of them to follow up about the remedial work that need to be done. 11.10.05 Sharif- This spill no. merged with Spill # 0505300 and hence closed."

FINDS:

Registry ID: 110067704791

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

SHWS:
Name: FILM STORAGE WAREHOUSE SITE
Address: 203-209 WEST 146TH STREET
City,State,Zip: NEW YORK, NY 10039
Program: HW
Site Code: 57156
Classification: N
Region: 2
Acres: Not reported
HW Code: 231009
Record Add: 02/06/2003
Record Upd: 06/14/2006
Updated By: DMMOLOUG
Site Description: The former Film Storage Warehouse is approximately 0.25 acres and is located at 203-209 West 146th St. in Manhattan. The property is located on the north site of West 146th St. between Adam Clayton Powell Jr. Boulevard and Fredrick Douglass Boulevard. The site is bounded on the north and west by residential buildings, and on the east by commercial buildings with residences on the upper floors. The former warehouse site has been unoccupied for over 50 years and is currently vacant. A site investigation was funded by EPA as a targeted site assessment. A Site Investigation Report was approved in November 2004. The site did not qualify for addition to the Registry of Inactive Hazardous Waste Disposal sites.
Env Problem: Several contaminants were detected in soils including semivolatile compounds, (primarily polyaromatic hydrocarbons)and several metals. Most of the soil contamination appears to be related to historic fill material. The building interior also has debris piles containing asbestos and lead (from insulation and lead paint, respectively). Soil vapor beneath the building contains volatile organic compounds above expected background concentrations.
Health Problem: Not reported
Dump: Not reported
Structure: Not reported
Lagoon: Not reported
Landfill: Not reported
Pond: Not reported

Description:	Handler: Non-Generators do not presently generate hazardous waste

Handler Activities Summary:

U.S. importer of hazardous waste:	No
Mixed waste (haz. and radioactive):	No
Recycler of hazardous waste:	No
Transporter of hazardous waste:	No
Treater, storer or disposer of HW:	No
Underground injection activity:	No
On-site burner exemption:	No
Furnace exemption:	No
Used oil fuel burner:	No
Used oil processor:	No
User oil refiner:	No
Used oil fuel marketer to burner:	No
Used oil Specification marketer:	No
Used oil transfer facility:	No
Used oil transporter:	No

Historical Generators:

FINDS:

Registry ID: 110069673348

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Tank Info:

Tank Number:	001
Tank Id:	18334
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

	F00 - Pipe External Protection - None
	E00 - Piping Secondary Containment - None
	A00 - Tank Internal Protection - None
	B01 - Tank External Protection - Painted/Asphalt Coating
	D01 - Pipe Type - Steel/Carbon Steel/Iron
	K00 - Spill Prevention - None
	L99 - Piping Leak Detection - Other
	G10 - Tank Secondary Containment - Impervious Underlayment
	H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)
	C01 - Pipe Location - Aboveground
	I04 - Overfill - Product Level Gauge (A/G)
	J05 - Dispenser - On Site Heating System (Supply/Return)
	G02 - Tank Secondary Containment - Vault (w/access)
	I05 - Overfill - Vent Whistle
Tank Location:	Aboveground - contact with impervious barrier... Tank bottom rests on impervious barrier, allowing visual indication of leaks.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	01/01/1986
Capacity Gallons:	4000
Tightness Test Method:	-
Date Test:	Not reported
Next Test Date:	Not reported
Date Tank Closed:	Not reported
Register:	True

BROWNFIELDS:
Name: A&C DEVELOPMENT SITE
Address: 2495 -2497 ADAM CLAYTON POWELL JR. BLVD.
City,State,Zip: NEW YORK, NY 10030
Program: BCP
Site Code: 402374
Acres: 0.341
HW Code: C231063
SWIS: 3101
Town: New York City
Record Added Date: 08/07/2008
Record Updated Date: 02/20/2009
Update By: MOBARRIE
Site Description: The site is a 0.341 acre commercial property on the south-east corner of 145th Street and 7th Avenue (a.k.a. Adam Clayton Powell Jr. Blvd.) in a commercial / residential area in the north-west area of Harlem, NYC. The property was recently reclassified as residential. The original documented structure on the property was a movie theater that operated from 1939 to 1979. From circa 1979 until recently, a supermarket operated on the property in the same structure. Except for a loading dock driveway, the structure encompasses the entire lot. There is significant petroleum-related VOC and SVOC contamination in on-site groundwater from a gasoline spill originating at the adjacent ExxonMobil station (Spill # 0751061, PBS# 2-157929). A Phase I investigation found that no history of detrimental environmental impacts and no history of industrial or commercial activity that could have resulted in environmental impacts. A Phase II investigation found no evidence of an on-site source. Of ten soil samples from five on-site locations, six PAHs were found in three samples above Part 375 restricted residential soil cleanup objectives. The contamination found on-site is due to the off-site source at the adjacent gas station. The BCP Application

A&C DEVELOPMENT SITE (Continued) **S113916500**

	was denied in a letter dated 2/18/09.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"11/2/07-Vought-See spill #0706608 at adjacent site located at 2495 Adam Clayton and also previous closed spill #0751601. DEC requires: 1)Tightness testing of fill line as per DEC Krimgold 2)collection of groundwater sample immediately west of tanks. Spoke with DEC Krimgold and as per PBS records, PBS inspection performed by DEC Falvey in 2/07 and numerous violations including product in sump/catch basin. DEC Krimgold also confirmed that spill number should have been reported by ExxonMobil upon discovery of product in the sump. Vought called ExxonMobil (Kenneth Drake Cell 908-451-0956 Fax 609-698-8761 (kenneth.j.drake@exxonmobil.com). Left message with Drake to return call with contact info. Vought sent out letter with above requirements and a one month deadline with cc to DEC Urda and Galli (Gehrling). Vought called station operator (Theodoros Zorbas 718-762-4632 and ask for Chris). Vought called Chris (fax:718-762-4711) and informed him of situation and faxed and mailed copy of letter. Vought received mail from Acosta that DEP project manager is Maurice Winter (718-595-4514). 11/05/07-Vought-Received call from and spoke to Lina Hitchcock (713-460-4006) from Exxon Mobil. Vought provided her with information of closed spill 0611117. Hitchcock will contact Galli and Kenneth Drake regarding splitting samples and coordinating activities with consultant from other site. Fill line was tested as per Lina but tanks were not on 4/13/07. Vought spoke to DEC Urda and he discussed pursuing consent order upon confirmation that ExxonMobil was source. 11/14/07-Vought-Received call from Brendan Mooney (ExxonMobil 631-218-0612). Mooney received letter and tank testing will be performed by 12/3. Workplan will be submitted to DEC by 12/17 for groundwater. Frank Messina will be ExxonMobil project manager (732-850-4009) and Kleinfelder contact is Brendan Mooney. 1/10/08-Vought-Current file review by Vought: Letter from Kleinfelder (Mooney) to DEC Vought-11/19/07. Crompco Corporation of Plymouth Meeting, Pennsylavania conducted tank and line testing at the Site on November 8, 2007. The results of the test indicate that all tanks and lines are tight. A copy of the tank test results are provided in Attachment A . Investigation workplan for groundwater sample will be submitted to DEC by 12/17/07. Letter from Kleinfelder (Mooney) to DEC Vought-12/14/97. Scope of work includes installation of five soil borings/monitoring wells. Two wells will be installed on both the eastern and western portions of the Site and one well will

EXXONMOBIL (Continued) **S108957494**

be installed on the northern portion of the site. Scope of work includes collection of two soil samples from each boring and installation of five monitoring wells. Subsurface investigation will proceed within 90 days of receiving approval and DEC will receive report within 90 days. 1/10/08-Vought-After review DEC requires: 1)faster turnaround than 180 days total for report. Vought called and spoke to Mooney and both parties agreed that work could be performed in 45 days with 60 days of report preparation. Vought sent letter approving of Plan pending inclusion of shorter timeframes for report submittal of 105 day total. 01/11/08-Vought-Received email from MobilExxon Drake that his correct mailing address is: Kenneth Drake ExxonMobil-US Retail Remediation Project Manager 297 Route 72W Suite 35, #285 Manahawkin, NJ 08050-2890 Cell: (809)451-0956 Fax; (609) 698-8761 06/11/08-Vought-Reviewed Subsurface Investigation Report dated 4/18/08 and received on 4/23 from Kleinfelder (Brendan Mooney Ph:631-218-0612 Fax:631-218-0787). Installation of five monitoring wells and proposal for investigation of subsuface geophysical anamolies found and submission of quarterly status reports. Site currrently has five (4000-gallon) gasoline USTs, one 1000-gallon waste oil UST, one 1000-gallon fuel oil UST, four dispenser islands and single story building. Depth to groundwater if 15-19'bg. Wells installed via air rotary to a maximum depth of 32'bg. ....four subsurface anamolies were detected beneath the Site . Highest PID reading was in MW2(16-18'bg) that was 1400ppm. Groundwater flow to the east-southeast. Report recommends: 1)further investigation of the subsurface anamolies via excavation 2)quarterly groundwater sampling. Soil analyticals show: 20800ppb toluene(MW2 18-20'bg), 74700ppb ethylbenzene(MW2 18-20'bg), 533,000ppb xylene(MW2 18-20'bg), 418,000ppb-1,2,4-trimethylbenzene(MW2 18-20'bg), 130,000ppb 1,3,5-trimethylbenzene(MW2 18-20'bg), 3570ppb MTBE(MW3 25-27'bg). Groundwater analyticals show:'74ppb benzene(MW1), 284ppb toluene(MW1), 71ppb ethylbenzene(MW1), 595ppb xylene(MW1), 15ppb MTBE(MW1), 452ppb benzene(MW2), 241ppb napthalene(MW2), 6580ppb toluene(MW2), 3290ppb ethylbenzene(MW2), 18100ppb xylene(MW2), 111ppb MTBE(MW2), 36ppb benzene(MW3), 7ppb toluene(MW3), 323ppb ethylbenzene(MW3), 86ppb xylene(MW3), 2400ppb MTBE(MW3), 108ppb napthalene(MW3), 2ppb benzene(MW4), 3ppb benzene(MW5). DEC approves report pending inclusion of requirements: 1)complete delineation of soil and groundwater contamination including well installation of wells northeast of MW2 and southeast of MW2 2)cc to AC Development 3)submission of RAP Vought sent letter with above requirements to above address. 07/14/08-Vought-Received call from Mike Meyerhoefer (Kleinfelder 631-218-0612). Meyerhoefer considering consolidation of spill number from adjacent property to that of Exxon Mobil. Requested review of RAP. Vought called and left message for DEC Haggerty to return call to DEC with possibility of transferring spill to him as Exxon portfolio manager. 07/15/08-Vought-Spoke with DEC Haggerty who requested that spill be transferred to him as Exxon Mobil portfolio manager. Spill transferred from DEC Vought to DEC Haggerty and spill file sent to Albany. 7/21/08 - Haggerty: Reviewed file including the Supplemental Remedial Investigation Workplan dated 7/8/08. The workplan included the installation of 3 MW's and digging 2 test pits in the area of metallic anomalies detected with GPR. I approved this workplan contingent on Kleinfelder installing 3 additional MW's to determine the extent of the LPH discovered at .72ft in MW-2. Kleinfelder states they will install absorbent LPH socks in MW-2 but without estimating how much LPH exists on the watertable, it could be

EXXONMOBIL (Continued) **S108957494**

insufficient. 7/23/08 - Haggerty: spoke with Michael Meyerhoefer from Kleinfelder concerning the work plan. We discussed installing only 2 of the additional MW's I requested and moving their proposed SB/MW-8 closer to the tank field where I wanted a well. PM approved. 8/25/08 - Haggerty: met with Ben Conlon and Bob Cozzy to discuss this site. The property adjacent to the ExxonMobil station is to be re-developed. This spill # was issued when the adjacent property performed a subsurface investigation and product was discovered in a MW along the ExxonMobil station side. Ownership of the product was identified as ExxonMobil's. The developer of the adjacent property applied for the Brownfield Program using ExxonMobil's contamination as their way into the program. Brownfields require an on-site source and they are claiming Exxon's product as their on-site source. The meeting with Ben and Bob was to clarify that if the developer refuses Exxon/Kleinfelder access, the DEC will clean up the contamination on the developers property. A consent order will be prepared by DEE for the investigation and remediation of the ExxonMobil station. Also issued a letter to Exxon requiring the following: 1. Conduct Enhanced Fluid Recovery (EFR) events on MW-2. EFR events must be performed on a monthly basis until directed otherwise. 2. Perform tightness testing on all tanks and lines. ExxonMobil must evaluate why .72ft of product was encountered in May 2008 but not 3 months earlier. What happened since the tanks and lines were tested in November 2007 to cause this release? 3. Sample groundwater in MW-2 to determine what Oxygenate concentrations are present. Analyze for 8260B and all oxygenates. 4. Prepare a Corrective Action Plan (CAP) for the investigation, Interim Remedial Measures (IRM), and future remediation of the site. 9/5/08 - Haggerty: Sent letter to Exxon requiring an SI be conducted on the neighboring (A&C) property to delineate the extent of LPH 9/8/08 - Haggerty: received call from Michael Meyerhoeffer from Kleinfelder. While excavating test pits in the area of a metallic anomaly, old tanks were discovered. Test pits were part of the approved SIWP dated 7/8/08. 9/9/08 - Haggerty: on-site for day 2 of test pit excavation. A total of 8 550gal UST's discovered, but more are likely to exist. Tanks are located 4ft below grade and are encased in concrete and appear to be filled with sand. All Kleinfelder was able to accomplish was excavating an ~10ft by 20ft area down to the concrete slab on top of the tanks removing some of the associated piping. Kleinfelder was not able to dig any further down or in any direction because the current fuel oil tank is to the south and the current gasoline UST's (5 4,000gal tanks) lie to the north and they were afraid of undermining any current tanks. New spill # called in because a layer of petroleum contaminated soil lie on top of the concrete slab over the tanks. 9/16/08 - Haggerty: Crompco tested tanks and lines. All tight 9/23/08 - 9/24/08 - Haggerty: on-site for 2 days of SI. Intent of this investigation was to delineate LPH on-site. 6 new wells installed. 2 adjacent to the recently discovered 550gal tank bed. Heavy soil and groundwater contamination, LPH encountered surrounding 550gal tanks (LPH black). PM believes these tanks to be the source. In all but 1 well, PM observed a sheen in the sample at water interface. 10/1/08 - Haggerty: Spoke with Exxon PM, Ken Drake, concerning the level of contamination I saw the the previous week. Followed up our conversation with an email to make DEC requirements clear. 1. ExxonMobil must move as fast as possible. Mr. Conlon wants the source removed ASAP. 2. If the old 550's aren't the source, then there was a large loss of inventory involving the current tank system which was

EXXONMOBIL (Continued) **S108957494**

never reported. 3. The IRM work plan for source/tanks removal must be submitted by the end of next week and the design for sheeting/shoring should be underway. 4. Off-site investigations across West 145th Street and on A&C property must be implemented in parallel with the IRM. 5. Since removal of all contamination is not feasible (product under station building and the limitations of excavating to 25ft in Manhattan) a remedial system will be required to deal with the remaining product as well as any remaining soil and groundwater impacts. 10/10/08 - Haggerty: approved Off-site Investigation Work Plan dated 10/2/08. Work plan submitted in response to my 9/5/08 letter requiring delineation/investigation of neighboring A&C property. A specialty rig will advance borings inside the old Supermarket building. Also on 10/10/08, an Underground Storage tank Removal work plan was submitted. Work plan does not address DEC requirement of removing tanks and contaminated soil (source). Since the current 4000gal tanks are pushing up against the old 550gal tanks, Exxon states that they will only be able to remove at the most 10 of the 12 550gal tanks and none of the contaminated soil beneath it. They state that to remove the tanks/source, they would have to install sheeting and shoring and remove the current tank system as well. 10/27/08 - Haggerty: submitted letter to Exxon stating the UST removal work plan did not address DEC comments and again required tanks/source removal as an IRM. 10/29/08 - 10/30/08 - Haggerty: 8 EFR/vapor extraction events conducted. Removed ~273gal of product, ~814lbs of vapor, and ~20,000gal of petroleum contaminated groundwater. An ICE (Internal Combustion Engine) was hooked up to burn the vapors being collected. Vapors were being vented at concentration over 120,000ppm (12%) 10/31/08 - Haggerty: Spill Busters (temporary product recovery system) installed at MW-6, MW-10, and MW-11 11/6/08 - Haggerty: had conference call with Ben Conlon and Exxon's legal team. I told them that the tanks/source must be removed. Ben informed them that the faster the source is removed the less penalty he will pursue from Exxon 11/10/08 - Haggerty: Exxon submitted an IRM source removal work plan. Removal of 18 tanks and overexcavate to 22ft with the installation of sheeting and shoring. Groundwater ~18fbg 11/4/08 - Haggerty: Spill Buster (LPH only recovery system) initiated in 3 wells exhibiting product. 11/24/08 - Haggerty: approved IRM tanks/source removal work plan. 11/24/08 - 1/15/09: Began outreach to the community by contacting the Community Board 10 District Manager, Geneva Bain. Also, began preparing fact sheets in both English and Spanish. We identified 5 buildings directly behind the station on West 144th which are our target area for the distribution of fact sheets. Geneva Bain brought in Charles Callway from WeAct, an environmental justice group in Harlem, to assist her with these issues. Decision made to have a public meeting on January 15, 2009 to give the community a chance to discuss any concerns. Our environmental justice coordinator, Lisa Garcia, was also brought in. Document Repository at the National Action Network at 109 West 145th Street, Harlem 12/12/08: SVE/AS test conducted 12/18/08 - Haggerty: Exxon submits an IRM work plan addendum. Due to the contraints of the site (canopy, station building, poor condition of adjacent buildings) the sheeting/shoring plan was modified. The excavation will be to 18ft. 12/23/08 - Haggerty: IRM Addendum approved 12/29/08 - Haggerty: Supplemental Subsurface Investigation Report sumbitted. Exxon had previously been warned that if field observations such as odor, staining, sheen, or visible product were not included in the boring logs and the report, we would refer the

EXXONMOBIL (Continued) **S108957494**

matter to our legal department. I was present for the investigation and sheen and visible product were apparent especially in MW-6 (right next to the source, the tanks). The report did not include this information and the report was rejected. 1/14/09 - Haggerty: ExxonMobil and Kleinfelder came to Albany for a meeting to discuss the public meeting in Harlem the following day and the reporting of field observations. Don Englert, Ken Drake, Charles Kolb from ExxonMobil Dennis Shin, Michael Michael Meyerhoeffer from Kleinfelder We informed them that the situation in unexceptable and any future report submitted without field observations will be rejected. We do not trust them. 1/15/09: Public meeting held in Harlem. Bob Cozzy and myself, ExxonMobil, Kleinfelder, CB10, WeAct, DEC Department Environmental Justice Coordinator, and the regional EJ coordinator present. Meeting was well received by all in attendance. 1/21/09: CAMP approved 1/26/09: IRM begins, LPH recovery system shut down. Over 800gal of product removed thru Mobile Remediation Events and the recovery system. 2/12/09 Previously unknown 4000gal tank installed in 1971 discovered. Filled with concrete and water. 2/18/09 - 2/19/09: PM on-site. Orphaned 4000gal tank removed previous day with soil contamination under the tank. All contaminated soil could not be removed due to the proximity of the station building. Tank located between the station building and the dispensers With met Engineers to discuss the retaining wall on the south side of the property which separates the Station of the adjacent apartment buildings and the Lenox Family shelter on West 144th St. Condition of the wall is very poor. Engineers state that the wall would have to be removed or braced before the sheeting/ shoring can be installed 2/24/09 - 2/26/09: PM on-site. PM witnessed all the 5 4000gal tanks removed. Double-walled steel buffide tanks in excellent condition. They were not the source or even a contributing factor. The 12 550gal tanks (in poured concrete vault) were visible from the 4000gal tanks excavation. Contamination noted around the 550's and underneath the tank mat for the 4000gal tanks. Appears that Exxon knew about the contamination back in 1988 when the 4000gal were installed. PM notifying legal (Scott Owens) and forwarded photographic evidence. 3/4/09 - Haggerty: approved off-site SI workplan to install 10 MWs in the sidewalks on both sides of West 145th, the east side of Adam Clayton Powell Jr. Blvd, and the north side of West 144th St 3/25/09 - Haggerty: approved off-site SIR for the A&C Property. Also approved a change in the UST/Source removal workplan. Due to the poor condition of the back retaining wall, PM made the decision to remove the installation of sheeting and shoring and use sloping to excavate the of the on-site contaminated soils. Approximately 300 tons of contaminated soil will be left in-place due to its close proximity to the station building. The upcoming SVE/AS system will be used to remediate the remaining soil contamination. 4/17/09 - Haggerty: RAP submitted which doesn't remediate the A&C property actively. PM planning a site visit to the A&C property with technical staff only to discuss how the contamination will be delineated and where to install SVE/AS system on their property. System must be operating on the A&C property before they re-open 4/29/09 - Haggerty: met with Ken Drake and Charles Kolb from ExxonMobil as well as Sandra Acosta from A&C and the current owners of the property. The owners are losing money becuase they're paying taxes and rent on a property that isn't bringing in any money because as it is vacant. Original plan was to redevelop but once the contamination was found and the recession hit, investors pulled out. We worked out a plan to delineate the

EXXONMOBIL (Continued) **S108957494**

groundwater contaminaiton and install SVE/AS points as needed. It will be difficult to install the points and piping inside the building, but ExxonMobil agreed. They will send an amendment to the RAP. 6/2/09 - Haggerty: SI workplan and RAP Addendum submitted. My comments were: 1. Section 4.2 (Site Geology and Hydrogeology) of the Remedial Action Plan Addendum must be revised to reflect the actual LPH thickness in the monitoring wells gauged on February 5, 2009. The infonnation is incorrect. 2. LPH recovery through the use of Spill Buster(s) must be re-initiated to accelerate the remedial process and prevent LPH from migrating off-site. 3. Install temporary sub-slab pressure monitoring points in the basement of the A&C property to ensure vapor control once the SVE system is operational on the A&C property (see attached map). 4. The decision to proceed with Phase IT and Phase mof the Remedial Action Plan Addendum will be made by the Department. 5. Remove items 1 and 2 from the March 2009 Corrective Action Plan and re-submit. 6/19/09 - Haggerty: had conference call with Ken Drake from ExxonMobil and Kleinfelder. The last issue holding up my RAP and RAP addendum approval was LPH recovery in addition to SVE/AS. Ken Drake agreed and sent an email stating LPH recovery will be incorporated into the remedial system and an additional RAP Addendum will be submitted. A figure showing the location of the proposed additional points will be provided for approval by the end of July 2009. A RAP Addendum presenting the revised SVE/AS and product recovery remediation system, as well as the supporting field observations, boring logs, etc., will be submitted within 60 days of completion of on-site drilling. RAP approved April 2010 - Currently, all system wells have been installed and the system, itself, is to be installed soon. Con Ed to install= electricity for the remedial (System requires 400amp service) in April. A&C property is still not open for business. Vapor Abatement System for the adjacent property is operating on the station s power. May 2010 - Con Ed informed Kleinfelder the system power won't be installed until Sept. 30. If he can't get it re-scheduled earlier, PM will make a call on their behalf July 2010 - Con Ed has installed power now waiting on delivery of the system. August 2010 - SVE/AS/Product Recovery system being constructed in Canada and is on schedule to be delivered in the first week of Sept. High concentrations of MTBE appear to be coming from the Hess Station immediately adjacent to the property to the east. EM requested FOIL of neighboring Hess Station records which PM provided. EM will be calling in a new Spill Oct.2010 - A SSUR was recieved. (SD) November 2010 - EM has handed the project over to Liberty Petroleum Realty LLC. See 11/18/10 letter from Liberty. (sd) February 2011 - SSUR due by the end of the month. PM and R2 Spills(Sharif) will discuss the recent on-site MTBE spike adjacent to the neighboring Hess station and determine whether Hess must proceed with an investigation. March 2011 - Sharif reviewed SSUR and asked Hess to perform SI to determine whether MTBE is coming from their station. System should be running in April April 2011: SVE/AS system start-up on April 20 July 2011 - System start-up report due in August August 2011: reviewed and approved the Start-up Report. Aracdis called to inform PM that the system shut itself down due to overheating of the CatOx unit when they turned on the AS legs. They should have consulted w/ PM before turning on the AS. Product remains on-site. November 2011: SVE/AS system running well. An ethanol detection in 3 wells beneath the adjacent building (no wells surrounding the current tanks or lines contained ethanol) prompted a discussion with ACradis PM. She

EXXONMOBIL (Continued) **S108957494**

re-sampled immediately and the results were negative for ethanol. Site needs Consnet Order with Liberty, currently have CO with EM February 2012 - site under global order between Liberty and ExxonMobil. System running well, Still can't turn on the whole system April 2012 - expanding the system with 1 additional AS well may be necessary. System running well June 2012 - expanding the system to cover an additional area on hold. SVE and product removal appears to be improving the area around MW-18 December 2012 - semi-monthly gauging of MW-18 was discontinued. System operating well. I approved the discontinuation of several wells. The were consistantly clean for years February 2013 - system good. some metals desorption around AS wells May 2013- system continues to operate well. Groundwater contamination is substantially reduced October 2013 - approved shutting down the system for the subsurface to reach static conditions to access whether additional mass can be removed May 22, 2014 - Haggerty: received call from Art Clark from First Environmental to discuss the possible closure of the Spill. Their client is the adjacent grocery store where product was first encountered during the property's Phase II investigation leading to the remediation of the former ExxonMobil gas station. He requested a conference call to talk about their client's concerns May 29, 2014 - had conference call with First Environmental, adjacent property owner (Jonathan Abed), Jim Moras, Scott Caruso and PM. They proposed Arcadis (RP's consultant) install 1-2 wells inside their client's grocery store where high dissolved BTEX concentrations (up to 80,000ppb) were encountered in 2009 because Arcadis is proposing Spill closure. Those monitoring wells were destroyed by the grocery store owner before the SVE/AS system came on-line because the concrete slab inside the grocery store was extended over the wells making them inaccessable. We inform them that a structural evaluation of that area would be required if a GeoProbe or drill rig was to install a monitoring well there. Based on our information, a large subsurface void remained below this area. June 5, 2014 - Haggerty: Jim Moras and PM had conference call with Arcadis (Sahithi Rondla, Andy Korik, and Neil Frasca) because they heard from the adjacent property's consultant, First Environmental. We informed them that we believe their request for additional data at the adjacent property is reasonable. October 20, 2015 - Haggerty: Issued NFA letter stating the Spill does not meet standards including the caveat that the Spill can be re-opened if contamination is encountered which requires additional remediation. The Spill was remediated to the extent feasible. Remedy consisted of on-site source removal and a SVE/AS system operated on and off-site until asymptotic levels of mass were recovered. Post-system shutdown, groundwater monitoring revealed no rebound in dissolved-phase contamination and the Spill would have been closed earlier if the adjacent property owners had not requested additional performance data. The Department determined the Spill needed to be closed to be consistent with the program. We entertained additional data being collected on the adjacent property but the logistical problems made it collection difficult and the various parties (ExxonMobil, Liberty Petroleum, the adjacent property owners and their consultant) involved created delay. The area in question in approximately 1500sq ft and the down-gradient groundwater is clean."

Remarks: "As per PBS inpsection on 2/9/07 by DEC Falvey, product found in sump and spill found but not reported. Note also heavy gasoline contamination at site immeidately adjacent to tank pad (Spill #0706608)"

DEC Memo:	"Spoke with John Engdahl @ Hess.His number is (732)750-6934. As per his request, recent data from 150-54 West 145th Street was sent to him for his review.(sr) 5/30/14 - Austin - Spill transferred from Rahman to Mahat for followup with Hess - end 4/29/16: Mahat e/c: DEC Mahat sent an email to DEC Haggerty inquiring his involvement on the spill case. DEC Haggerty sent an email update on the case. Email: Santosh, I recently closed Spill #0751061, the long-term ExxonMobil remediation spill number, at this property. In 2010, I asked Kleinfelder (ExxonMobil s consultant) to call in the above-referenced spill number because elevated MTBE was encountered during quarterly monitoring which was up gradient of ExxonMobil distribution system and the immediately down gradient of the adjacent Hess station located next-door. At 12,000ppb, I thought it was worth investigating. I ve attached the last quarterly report from Kleinfelder which demonstrates the well in question (MW-5) has since cleaned up. Let me know if you need additional information. Thanks, Mike Spill case has been crossed referenced with old spill case #0751061. A quarterly report has been uploaded on D2 for reference. Based on the report, the spill case is closed. "
Remarks:	"possibly from Hess Gas Station next store - lab results showed 12000 ppb of mpbe - Mike Haggerty aware of this situation"

Spiller Name:	FRANK GEHRLING
Spiller Company:	EMPTY COMMERCIAL BLDG.
Spiller Address:	2495 ADAM CLAYTON POWELL
Spiller Company:	001
Contact Name:	FRANK GEHRLING
DEC Memo:	"09/14/07-Hiralkumar Patel. spoke with Frank at Galli engineering. they have been hired by property owner A&C development. as per Frank, Phase II was done as part of rezoning of the site and DEP required for such investigation. they did five borings on site and took five soil samples and one groundwater sample from boring (no well installed). soil borings were terminated at 12 ft depth, at depth of proposed building foundation. and groundwater sample was taken at 23 ft bg and found free product on top of water. currently there is a vacant building and as part of redevelopment, existing building will be demolished. Frank has sent samples to lab, today. he will send analytical results once he has it. there was no PID readings observed from soil samples. asked Frank to send site plan with sampling locations and location of suspected gas station on W 145th st. property owner: 2495 Realty Corp. C/O A&C Development Attn.: Sandra Acosta 300 Northern Blvd, Suite # 200 Grate Neck, NY 11021 PH. (516) 466-2122 (O) (646) 752-0576 (C) Fax (516) 466-2855 email: sacosta@ac-dev.com Frank Gehrling Galli Engineering Ph. (631) 271-9292 Fax (631) 271-9345 email: fgehrling@gallieng.com left message at A&C development. from area map, Mobil gas station (PBS #:

EMPTY COMMERCIAL BLDG. (Continued) **S108764509**

2-157929, station manager: 212-926-5643) is next to subject site along W 145th Street. found two old closed cases at gas station (spill #s: 9008914 & 0507314). Mobil station is on east of subject site, towards Harlem river. (in general, mobil station is on down gradient from site) alternate addresses for the subject site: 160-164 W 145th Street, 2495-2499 7 Ave, 2495-2499 Adam C Powell Blvd received email from Frank with sampling location plan. there were nine geotechnical borings (B-1 to B-9; no environmental data) and five soil borings (SB-1 to SB-5; for Phase II) done. soil borings went to 12 ft, except SB-3 which had refusal at 8 ft. groundwater sample was collected adjacent to geotechnical boring B-3, at the northeastern corner of the building. The Mobil gas station is adjacent to the subject property. The USTs are about 30' from B-3. The groundwater sample had a very strong odor of gasoline and there was a layer of free product in the sample jar. 09/17/07-Hiralkumar Patel. received message from Sandra Acosta. left message for Sandra. received call from Ms. Acosta. she mentioned that currently site has two story vacant building, which was a super market. building was running on gas heating sustem. as per Ms. Acosta there are no tanks on-site. asked Ms. Acosta to submit copy of Phase I report and scaled site map with sampling locations. as part of redevelopment, they will demolish existing building and will construct residential complex with parking in basement. as per Ms. Acosta, basement floor will be 14 ft bg. told Ms. Acosta that RAP must be approved prior to any development at site. received Phase I from Ms. Acosta. abstract: - entire site is covered by a two-story building - property is approx. 30 ft above mean sea level - regional groundwater flows in east direction towards the Harlem river - as per site owner, supermarket was operational for more than 20 years - current building first appear on the 1939 Sanborn Map 09/26/07-Hiralkumar Patel. sent letter to Ms. Acosta requiring soil/groundwater delineation, site specific groundwater flow direction, interim remediation and vapor barrier installation. letter emailed to Ms. Acosta and Frank. re-sent letter with DEC Vought's name as project manager. 10/03/07-Hiralkumar Patel. received email from Ms. Acosta with sample analyticals and site map. found some SVOC contamination in soil samples, but heavy contamination in groundwater sample. few values of groundwater contamination: ----------GW-1
2-Methylnaphthalene----------51,000
Naphthalene----------55,000
1,2,4-Trimethylbenzene------540,000
1,3,5-Trimethylbenzene------550,000
Benzene----------28,000
Toulene----------290,000
Ethylbenzene----------360,000
Xylene----------1290,000
MTBE----------4,300 sent email to Ms. Acosta requiring further investigation, as mentioned in letter. 10/31/07-Vought-File review by Vought: Letter from DEC Patel to Sandra Acosta (A&C Development)-9/26/07. CSL sent to Acosta requiring delineation of soil and groundwater via installation of monitoring wells 2)delineation of soil contamination 3)implementation of interim remedial measures including weekly recovery and monitoring of free product 4)installationof vapor barrier and possibly SSDS(note possible reference to vapor phase contamination in Galli Final Phase II Report) 5)collection of endpoint soil samples if soil contamination is noted during excavation for foundation. Final Phase

EMPTY COMMERCIAL BLDG. (Continued) **S108764509**

II Investigation Report (A&C Development Partners amd Galli Engineering)-10/4/07. Site is E designated. Galli recommends installation of three monitoring wells. No source of petroleum contamination was identified in soils at the site in ten soil samples and as such Galli feels that endpoint sampling is not necessary. Request to table IRM issues until groundwater delineation is complete as RP may be determined to be RP next door and they will be responsible. Pending additional groundwater delineation, we believe NYSDEC should help us get the monetary equivalent to pay for the membrane from the adjacent property owner . Vapor mitigation system not necessary due to basement parking garage in building. Phase II ESA-Galli Engineering-10/4/07. Site will be developed as eleven (11) story mixed use apartment building with a one story open air ventilated garage . Five geoprobe borings to a depth of 12' and collection of ten soil samples and one groundwater sample. Depth of proposed excavation is twelve feet. South of property is retail, east is an active gas station. Groundwater at depth of 23' below grade. There was a very strong odor of petroleum, thought to be gasoline, during the groundwater sampling event . The minor VOC contamination found in the soil may be the result of spreading of vapor phase gasoline originating in groundwater since no evidence of a source area form a spill of gasoline was found on the site in the soil samples . Report recommends further investigation to determine if adjacent site is the source. Soil analyticals show minor PAH exceedences attributable to fill material and no VOC detections. Groundwater analytical shows: 28000ppb benzene (GW1), 290000ppb toluene(GW1), 490000ppb xylene(GW1), 360000ppb ethylbenzene(GW1), 11000ppb napthalene(GW1), 4300ppb MTBE(GW1). DEC requires: 1)cc to DEP as site is E designated 2)collection of endpoint samples from final excavation 3)IRM including product recovery if applicable 4)SSDS and vapor barrier 5)confirm that groundwater delineation is needed 6)spills, TTF on adjacent gasoline site 7)opening of spill on ExxonMobil property and cc to ExxonMobil 7)Depth of proposed foundation 8)cc to DEC Urda 11/2/07-Vought- See also spills #0751061 (open) and closed spill 0611117. Spoke with DEC Krimgold and as per PBS records, PBS inspection performed by DEC Falvey in 2/07 at 150-154 West 145th St and numerous violations including product in sump/catch basin. DEC Krimgold also confirmed that spill number should have been reported by ExxonMobil upon discovery of product in the sump. Vought called ExxonMobil (Kenneth Drake Cell 908-451-0956 Fax 609-698-8761 (kenneth.j.drake@exxonmobil.com). Left message with Drake to return call with contact info. Vought called Acosta (516-466-2122 fax:516-466-2855) for DEP contact and depth of foundation and to explain requirements and fact spill opened on adjacent site and left message to return call to DEC. Vought called Galli Engineering -Frank Gehrling(631-271-9292 fax:631-271-9345). As per Gerling, free product was noted in MW1 and proposed foundation depth is approximately 13' below grade. Vought also suggested fingerprint on product. As per Gherling, building was originally movie house with possible heating oil tank converted to grocery store. Old building still in place. Gehrling will return call to DEC Vought with DEP contact information for cc list. Vought received email from Acosta that DEP project manager is Maurice Winter. 01/11/08-Vought-Current File Review by Vought: Letter from DEP Wuthenow to Gehrling-12/4/07. DEP reviewed October 2007 Phase II. Site would be an 11-story residential building with ground floor retail use and underground parking garage. Site currently occupied by

EMPTY COMMERCIAL BLDG. (Continued) **S108764509**

2-story commercial building that will be demolished. Five soil borings performed by Gali in September 2007. Groundwater present at 23' below grade during drilling. NYCDEP requires: 1)submission of RAP and disposal as per NYSDEC regulations, site specific Construction Health and safety plan, an active SSD system, covering of soils with plastic sheeting, removal of impacted soil in accordance with DEC regulations, maintaining dust supression, closure of all tanks in accordance with DEC, DEP discharge permit if dewatering is to take place, and note that DEC may have further requirements with respect to groundwater. Email from Gehrling to DEC Vought-12/6/07. Monitoring wells have been installed and are being developed. Brandon Mooney of Kleinfelder, consultant for ExxonMobil has been in contact with us and we have supplied him with a copy of the Phase II ESA . Remedial Action Plan (Galli Engineering)-1/5/08. Final Remedial Investigation Report included that shows no soil contamination found onsite in 5 soil borings. No historical or current use of gasoline onsite. No active groundwater remediation work planned as this site not source. Presence of high bedrock formation in the west side of the property. Three monitoring wells were installed into bedrock however one well remains dry. Galli agrees to soil excavation and installation of an SSDS system and vapor barrier. Bedrock rises quickly from east to west and When uncorrected depths of the depth to bedrock were plotted, the map shows a generally easterly dip to the slope of the bedrock surface . There is also a bedrock high to the south. All soils will be excavated to a depth of approximately 12'and removed from the Site... . Also installed will be watertight sheeting and waterproofing and a vapor proof membrane barrier. Galli is of opinion that a passive system would be sufficient since the subsurface garage level of this building would be ventilated. However the NYCDEP and NYSDEC have requested that the system be active . After review of letters sent by DEP and DEC, Vought noted that active SSDS was only required by NYCDEP, not DEC. Endpoint samples will also be collected. Soils will be direct loaded onto trucks to prevent odors in neighborhooed and a spill Closure Report will be submitted to the DEC and NYCDEP. Vought sent letter approving of RAP with cc to Exxon Mobil (Drake), NYCDEP Wuthenow, DEC Urda and Gehrling. 06/10/08-Vought-Received call from and spoke to Sandra who works for owner of property. Property will not be developed for at least one year due to delay in not receiving approval from DEP and due to poor economy. Exxon Mobil would like to enter in cleanup agreement with owners of adjacent site (AC Development). DEC expressed no concern of holding activity on site for year as responsible party is ExxonMobil. 09/05/08-Vought-Spill transferred to DEC Haggerty as RP for site is ExxonMobil at 150-154 145th St (Spill #0751061). 3/4/09 - Haggerty: Spill consolidated into ExxonMobil spill 0751061. The Mobil Station 17-QDM at 150-54 West 145th Street, Harlem NY is directly adjacent to this property and is the proven source of this contamination. The Mobil station is currently in active remediation removing tanks and contaminated soil as an IRM. ExxonMobil requested the consolidation of this spill into their spill. spill closed "

Remarks: "During a phase 2 site assesment found gasoline in the groundwater. There is a Mobil gas station next door @ 150 W. 145th st. ... unknown if there is a connection. Small amount of free product found in the water sample. Frank Gehrling 516-723-1785"

Tank Info:

Tank Number:	001
Tank Id:	61813
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron
K00 - Spill Prevention - None
E00 - Piping Secondary Containment - None
H00 - Tank Leak Detection - None
L09 - Piping Leak Detection - Exempt Suction Piping
F00 - Pipe External Protection - None
I05 - Overfill - Vent Whistle
C03 - Pipe Location - Aboveground/Underground Combination
G00 - Tank Secondary Containment - None
J02 - Dispenser - Suction Dispenser

Tank Location:	Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	Closed - Removed
Pipe Model:	Not reported
Install Date:	01/01/1975
Capacity Gallons:	5000

DEC Memo:	"09/29/16-Hiralkumar Patel. alternate address: 120-138 W 145th Street PBS #: 2-297607. as per PBS record, the site has/had following tanks: - five (5) 4,000 gal gasoline/ethanol USTs, in-service, installed in Jun. 1993 - one (1) 550 gal other product UST, in-service, installed in Jun. 1993 - two (2) 2,000 gal gasoline USTs, removed in May 1993 - four (4) 4,000 gal gasoline USTs, removed in May 1993 - one (1) 550 gal other product UST, removed in May 1993 other spills #: 8606425, 9210186, 9212043 spill #: 8606425 was reported on 01/15/1987 due to tightness test failure of gasoline tanks. case closed. spill #: 9210186 was reported on 12/02/1992 due to tightness test failure of two (2) 4,000 gal and one (1) 2,000 gal gasoline tanks. case closed. spill #: 9212043 was reported on 01/21/1993 due to petroleum vapor coming up from ground. case closed. 3:18 PM:- spoke with Mr. Butler at Speedway. he mentioned that the site is owned by Hess, which has now merged with Speedway. currently, Speedway is closing gas station on-site. they have removed on-site tanks. the tanks were found in good condition. during removal of remote fill line, they came across some historical contamination under the sidewalk. Speedway will continue soil remediation and will collect endpoint samples. they will remove dispensers and associated piping. Hess Retail Stores LLC. **property owner** c/o Speedway LLC. 500 Speedway Drive Enon, OH 45323 Attn.: Matthew Butler (105 Fieldcrest Ave., 5th Floor Suite 505 Edison, NJ 08837) Ph. (732) 738-2756/2924 email: mbutler1@speedway.com Edward Russo EnviroTrac **contractor working for Speedway** Ph. (631) 924-3001 email: edr@envirotrac.com 09/30/16-Hiralkumar Patel. 2:51 PM:- sent letter to Mr. Butler requiring endpoint samples. asked him to submit report by the end of 11/18/16. letter emailed to Mr. Butler, Ed and DEC Zhune. case assigned to DEC Zhune. 12/6/16-Vought-This spill reassigned from DEC Zhune to Vought as Vought assisted Zhune with review, Zhune out of office, and impending property transaction and request for expedited review. Vought received email on 11/21/16 from Speedway (Mathew Butler email:mbutler1@speedway.com Ph:732-738-2924) that Jeff, We appreciate the DEC s time today to discuss the UST closure and the historic details of closed Spill #9212043. As requested, attached are copies of the documents associated with the historic Spill that supported DEC closure, as well as a copy of the NFA letter. The documents provided include: 1995 UST Closure Report prepared by GES, 700 tons of soil was removed from the site during the project. 1996

FORMER MERIT/FORMER HESS STATION (Continued) **S118952119**

Site Assessment Report prepared by GES summarizing installation of four monitoring wells (MW-1 through 4). 1998 Remedial Investigation Report prepared by GES summarizing a 1996 GeoProbe investigation and slug test. 2004 1st Quarter Update Report prepared by EnviroTrac. April 22, 2004 No Further Action Letter. The property is being sold to an adjacent property owner who has interest in the air rights. Based on recent conversations with the buyer there is no current plans for site development. However, if development occurs the future use of the property is restricted to allow industrial/commercial use, limit residential use to upper floors and require a vapor barrier/vapor mitigation system be installed for residential use. The specific language in the sale agreement restricting property use is provided below. The use of the Property shall be restricted solely to (i) industrial/commercial use within any portion of the improvements located at the Property, and (ii) to the extent permitted by applicable zoning, residential use on and above the second floor of any improvements located at the Property; provided that any residential use at the Property shall be further conditioned on the installation and maintenance of a vapor barrier and vapor mitigation system at the Property. The installation and/or existence of potable wells on the Property is prohibited. The groundwater underneath the Property shall not be used for any purpose whatsoever. This restriction, however, does not prohibit the installation or use of any compliance wells, or any groundwater monitoring, recovery or extraction wells or similar devices, used for or related to the performance of any Corrective Action. The recent tank removal and corresponding closure sampling do not indicate the presence of a new spill condition associated with this tank system. With the exception of a small area of petroleum impacted soil near the remote fill, which was fully removed through excavation, field observations made during the tank removal did not identify any petroleum impacted soil surrounding the tanks. The impacted soil within the area of the tank field was identified three feet below the tanks under a two foot thick concrete pad (tank anchor). The pea gravel and concrete below the tanks showed no evidence of petroleum impacts. As shown on Figure 2 of the attached 1998 RIR, the former tank system that was removed in 1994 was located immediately adjacent to the recently removed tanks. Based on this information, the conditions identified beneath the tank anchor do not represent a new Spill condition and appear to be associated with Spill #9212043. In addition, all soil VOC concentrations were detected below Part 375 Restricted Use Soil Cleanup Objectives (Commercial) and the future use will be restricted as detailed above. Speedway requests DEC closure for Spill #1606459, as this is a re-reporting of closed Spill #9212043. Again, we appreciate the DEC s timely review of the information provided as it will greatly assist us in finalizing the property transaction, as the sale is scheduled for the very near future. Feel free to contact Ed Russo at EnviroTrac or myself if you have any questions. 12/6/16-Vought-Reviewed email above with attachments including reports from closed spill 9121043. Reports for that spill document the following: Soil contamination up to 145,800ppb Total BTEX that was left in place after a tank upgrade around 1/95; Soil contamination left in place around the dispenser islands up to 21,870ppb Total BTEX; Soil contamination around the former waste oil UST left in place up to 139ppb Total BTEX; Removal of 701 tons of contaminated soil during this upgrade; Groundwater at depths of 12-15'bg; measured groundwater flow to the southeast; attenuation of

FORMER MERIT/FORMER HESS STATION (Continued) **S118952119**

groundwater samples (including those down-gradient of former tanks, dispensers, waste oil tanks) from 9/94 through 1/04; groundwater levels in 1/04 that were within natural attenuation ranges as per prior guidance from DEC Central office; no sensitive down-gradient receptors (commercial grocery store down-gradient with basement likely above water table). This spill closed as this spill was for discovery of contaminated soils around the former UST pad (already historically documented via closed spill 9212043) and contaminated soils around remote fill port (which were excavated fully to below Unrestricted SCOs) as per Speedway. Spill also closed as down-gradient impact of spills previously documented under spill 9212043 to be naturally attenuating and spill is not a threat to the wider community as per guidance from DEC Central Office. Spill also closed and soil contamination removal not feasible as per CP-51 Guidance and prior guidance from DEC Central Office. Furthermore site also has a sale agreement restriction to only commercial industrial use on ground floors and notes a vapor barrier/mitigation system will be installed if the property is ever developed as residential. Spill also closed as Spill Closure letter to include standard cautionary statement on possible necessity of vapor mitigation if site use ever changes. Spill also closed as all source USTs and piping are no longer being used and as such no petroleum source remains. Vought added summary site plans to D2. Vought sent email to Speedway (Butler) with cc to Envirotrac (Rennnie and Russo) that Matt, Thanks for your patience on the review. Unfortunately Veronica has not been feeling well and has been out of the office for the past week. Due to the impending property transaction, I have reviewed the files you sent as well as the current data, and the Department has closed the above referenced spill effective today. What is the address for the Spill Closure letter? Thanks . 12/6/16-Vought-Received reply from Butler that Jeff, Thanks for the review, I understand you guys have heavy case loads. Please send the NFA letter to our corporate office to my attention. Speedway LLC 500 Speedway Drive, Enon, OH 45323 Could you also please email me a copy of the NFA letter? Thanks Vought drafted Spill Closure letter, added to D2, sent via US Mail, and sent via email to Butler with cc to Rennie and Russo. 2/22/17-Vought-Received email from DEC Rivera on 2/22/17 that Good Morning,I received an inquiry from the Assemblyman s office where this site is. It seems to be a former Hess gas station that is now gated. They are asking if we have anything on file at this site or any info on what s going on here. Does the address pop up in anyone s program? RSE replied to Rivera with copy of these spill notes."

Remarks: "spill is contained and clean up is in progress"

Registry ID: 110069705590

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was SUN 04/22/2004-File Update by Sun: -Update Report (October 2003 through January 2004) by EnviroTrac: Four (4) monitoring wells were gauged and sampled on 1/30/2003. THe depths to groundwater ranged from 13.95 to 15.65 feet below grade. Groundwater flow direction was towards the southwest. No free product was detected in any of the monitoring wells. Based on the groundwater sampling data of this report and based on overall downward trend of chemical concentrations of compounds over the last three sampling events, and no sensitive receptor is located uo and down-gradient of MW-4, this spill is closed."

FINDS:

Registry ID: 110069672090

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"DEC Piper spoke with David whent. Due to a product discrepancy, system was invesitgated. Dispenser found to be leaking. Contractor to come on 11/11/13 to rmeove dipenser and investigated beneath pan. 9/10/15- DEC piper left message for Steven Charron at Clobal montell Group. 781 786- 6320 5/4/16- DEC Piper received and reviewed closure request. Based on work to date, no further action is granted with respect to remedial activities though the 1K UST found needs to be registered properly prior to closure. Once completed, the spill can be closed. There is an active remediation site under spill 9713385 which will handle divesting of the site. 07/28/2017 - In January 2017 during the removal of an underground storage tank (UST) system, MES Getty's contractor, excavated soil from the former tank field, former product piping runs and dispensers to remove petroleum impacted soil. During removal activities thirteen previously unknown ghost tanks in the southern area of the site were identified, and subsequently removed in May 2017. From January 9 to July 5, 2017, 43 excavation endpoint soil samples were collected from the sidewalls and bottom of the excavation extents. A review of the laboratory analytical data shows seven excavation soil sample locations at depth exhibiting VOC concentrations in excess of NYSDEC CP-51 soil cleanup guidance, and eight excavation soil sample locations exhibiting SVOC concentrations in excess of applicable NYSDEC CP-51 Soil Cleanup Guidance. All of the excavation soil samples were reported below NYSDEC Brownfield Cleanup Program Commercial Soil Cleanup Objectives, with the exception of SW-8A (7 -7.5), SW-8B (7 -7.5) and SW-8B (14). Approximately 2,268.84 tons of excavated soil was transported off-site for disposal at Soil Safe s facility located in Logan, New Jersey. Based on the above presented information in the July 26th UST Closure and Remedial Excavation Summary Report the spill has been closed."
Remarks:	"dispenser leaking into soil, c/u and repair pending"

FINDS:

Registry ID: 110004324856

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Merit service station across W145th Street. Four (4000-gallon) gasoline USTs upgraded. Soil excavated to approximate depth of 3' below grade. Six soil endpoint soil samples taken (analyticals provided). Soil analyticals show concentrations up to 47000ppb toluene (S5), 1603000ppb xylene, 88800 ppb napthalene and 19300ppb MTBE. 84.24 tons of soil excavated and removed (disposal manifest provided). Subsurface Investigation Report-Dec 2000-Tyree-Eleven soil borings performed using Geoprobe. Perched groundwater was encountered at approximate depths of 10-15bls . Soil analyticals show concentrations up to 8060ppb benzene (SB7), 288000ppb toluene, 16200ppb MTBE (SB8), 70300ppb napthalene. Groundwater analyticals show up to 6470ppb benzene, 29600ppb toluene, and 172000ppb MTBE. Quarterly Monitoring Reports-March 2001 thru Sept 2001. Four monitoring wells on-site. Remedial activities are EVR/Remediation Assessment. Two additional wells installed in 7/1. Groundwater concentrations up to 3820ppb benzene (W1), 1770ppb toluene(W1), 26940ppb xylene (W5) and 445000ppb MTBE (W4). Pilot Test Report and SVE and DPE-Nov 2002-Tyree-See RAP comments (June 2003) for pilot test results. Tyree proposes DPE due to higher radius of influence than SVE. 3/29/2003-Vought-Received email from Paul Hatcher that 2 of product was found in W5. Product was bailed. Monitoring and bailing began weekly. Quarterly Monitoring Reports-Oct 2002 thru Dec 2001. Six monitoring wells on-site. Remedial activities are EVR/Remediation Assessment. Free product (.02') in W2. Groundwater concentrations up to 2100ppb benzene (W1), 6180ppb xylene (W5) and 348000ppb MTBE (W4). Letter to NYSDEC-Feb 18, 2003-Letter sent to NYSDEC by Tyree requesting Stipulation Agreement so that Tyree could

GETTY#58409 (Continued) **S108637243**

proceed with proposed system design and installation. In letter Tyree states that they previously submitted a Soil Vapor Extraction and Dual Phase Extraction Pilot Test in Nov 2002. 4/17/2003-Vought sent Stipulation, CAP, Guidance Document and cover letter to Kevin Shea (Getty Properties). 6/3/2003-Vought-Received signed stipulation agreement from Getty. Quarterly Monitoring Reports-Jan 2003 thru March 2003-Tyree-Six monitoring wells on-site. Groundwater concentrations up to 3550ppb benzene(W1), 2330ppb toluene(W1), 12700ppb xylene(W4) and 59800ppb MTBE. No free product in wells. Four dual phase extraction wells (DPE) wells were installed for future remediation system. Borings logs and soil analyticals provided. Soil concentrations up to 2180ppb benzene(E4), 3740ppb toluene(E4) and 4140ppb MTBE(E4). Proposed Remedial Action Plan-June 2003-Tyree-Depth to perched groundwater is ten to twelve feet. Groundwater flows to the east. During installation of wells W5 and W6 two ghost tanks found and could not be removed due to their location underlying operational pump island (both tanks were filled with water with no measurable product). Review of historical maps by Tyree suggested that there are possibly eight additional tanks on-site. Free product found in wells W4 and W5. A radius of influence of 16 was estimated by pilot tests, therefore conventional SVE would not accomplish treatment goals. A following pilot test of DPE indicated groundwater pumping in the DPE created a zone of influence exceeding 25'. Soil heterogeneities cause vapor flow rates to be less than 40cfm. Tyree proposes installation of DPE system of five extraction wells with liquid ring vacuum pumps. Estimated fluid extraction rate is 10gpm. Extraction wells installed in Apr with radius of influence of 20'. Fluids will be processed through a oil/water separator, air stripper and liquid phase carbon unit. Treated groundwater will be discharged into storm sewer. Vapors will be scrubbed using activated carbon asdorbtion. Monthly air samples will be collected and analyzed for NIOSH 1501. Discharge of wastewater will be monitored weekly for 30 days then monthly thereafter. Tyree requests written approval of RAP. 6/27/2003-Vought-NYSDEC requires 1)off site delineation 2)surrounding area site plan, sensitive receptor monitoring schedule and data 3)Additional copies of Site status report and Remediation Report of Aug 2002 (Vought-never received these documents) 4)Investigation of eight additional tanks referred to in RAP. These requests must be satisfied before RAP approval. Vought sent email to Tyree (Hatcher) on 7/2/03 with above requirements. Quarterly Monitoring Reports (Tyree) July 2003 thru Dec 2003. Five monitoring wells onsite, one monitoring well/dual phase extraction well and four DPE wells for future remediation system. DPE wells were installed 4/10/03-4/11/03. Groundwater flow to the northeast. .15' of LNAPL in MW15. Trenching to connect all DPE wells completed in 7/03. Awaiting purchase of DPE system and permits for system . Groundwater concentrations up to 1020ppb benzene(W1), 865ppb benzene(W2), 1420ppb benzene(W3), 1560ppb benzene(W4), free product(W5), and 14ppb MTBE(W6). Monthly monitoring and bailing to recover free product. 2/19/04-Vought-Sent letter as per CAP rejecting RAP until the following requirements are met: 1)delineation to the west of W3, east of W-1, northwest of W2, downgradient from W4 2)inclusion of W5 in DPE system due to free product 3)surrounding area site plan. Vought sent letter with above requirements on 2/19/04. 5/1305-Vought-New file review by Vought: Quarterly Monitoring Reports (Tyree Org)-July 2004 thru Dec 2004. Wells onsite include: five monitoring wells, one monitoring well/dual phase extraction well, and four DPE wells for future remediation

GETTY#58409 (Continued) **S108637243**

system. Groundwater flow to the east-northeast at depths of 10-12' below grade. Groundwater analyticals show: 2600ppb benzene(W1), 1370ppb toluene(W1), 1200ppb ethylbenzene(W1), 5640ppb xylene(W1), 3690ppb MTBE(W1), 1490ppb benzene(W3), 699ppb toluene(W3), 242ppb ethylbenzene(W3), 652ppb xylene(W3), 3750ppb MTBE(W3), no sample(W4), no sample(W5), 11ppb MTBE(W6). 5/13/05-Vought-DEC no longer requires delineation upgradient of source but however still requires: 1)addition of MW5 to DPE or affirmation of inclusion in ROI of DPHVE system. Vought sent email with requirements. Vought received email from J Rennie that MW 5 was tied into DPHVE. 08/31/2005 - Feng - Project transferred from Vought to Feng. 11/15/2005 - Feng - Dual Phase Extraction System is installed and ready to run. However, it is still awaiting electric approval from NYC Electrical Control Board/Cod Edison. 12/19/2005 - Feng - Quarterly Monitoring Report, 7/2005 - 9/2005. The site is currently an active gasoline station & convienience store with car wash. Groundwater flows to east at the depth of 10.81' to 11.99' bg. There are 5 monitoring well, 1 monitoring/extraction well and 5 extraction wells. W-1, rapid increased and 49,390 ppb BTEX, rapid decreased and 804 ppb MTBE. W-2, rapid increased and 12,163 ppb BTEX, decreased and 8,500 ppb MTBE. W-3, decreased and 7,187 ppb BTEX, decreased and 3,540 ppb MTBE. W-4, increased and 3,638 ppb BTEX, decreased and 2,180 ppb MTBE. W-5, increased and 6,135 ppb BTEX, increased and 120 ppb MTBE. W-6, increased and 32 ppb MTBE, 10 ppb MTBE. Absorbent sock in W-5. Still waiting for electrical approval. (RJF) 1/17/2006 - Feng - Quarterly Monitoring Report, 10/2006 - 12/2005. The site is an acitve gasoline station & convienience store with car wash. Groundwater flows to east at the depth of 10.14' to 11.43' bg. 5 monitoring wells, 1 monitoring/extraction well and 5 extraction wells onsite. W-1, 48,920 ppb BTEX, 1,470 ppb MTBE. W-3, decreased and 4,467 ppb BTEX, 3,150 ppb MTBE. W-4, increased and 6,912 ppb BTEX, 2,410 ppb MTBE. W-6, low and 1 ppb BTEX, 13 ppb MTBE. Absorbent socks in W-5. Still waiting for electrical approval for the system installed onsite. (RJF) 1/17/2006 - Feng - Emailed to Joe Rennie asked about the status of the site, and the reason why couldn't get the electrical approval. (RJF) 2/13/2006 - Feng - Emailed to Joe Rennie requested the status of the pending electrical approval from ConEd. (RJF) 2/13/2006 - Feng - Reply from Joe Rennie Please be advised that Tyree has tried making contact numerous times via phone and faxes with the electrical sub-contractor requesting the status in this matter. When Tyree was able to make contact with the sub-contractor, it was told to us that they did not hear back from the ECB and that they will make a follow-up phone call to check on the status. At this point, the only thing that Tyree can do is to keep contacting the sub-contractor. If NYSDEC has any suggestions, we are surely open to them. (RJF) 2/14/2006 - Feng - Emailed to ConEd requesting status of the project and reason why electric service hasn't granted yet. and asked for the contact information of the project manager. (RJF) 2/14/2006 - Feng - Joe Rennie emailed the contact information of ConEdison. (RJF) 2/15/2006 - Feng - Letter requesting assistance in gaining electrical approval from ConEdison to Kevin Gallagher via fax: 212-673-1729 and certified mail. (RJF) 2/15/2006 - Feng - Called from Antonio Alaimo (ConEdison) and follow up by email. He called Mr. Godsil (Tyree's sub-contractor) on 1/26/2006 and Godsil is still waiting for the certificate from the city before ConEd could install a new meter. He said once the certificate is on hand, ConEdison will take care of this case right away. (RJF) 2/15/2006 - Feng - Called Harry Godsil

GETTY#58409 (Continued) **S108637243**

(516-827-5324). He said that they re-filed for certificate and done the re-wiring. He willl follow up with the Electric Board and ConEdison. It will be all set in a couples weeks. (RJF) 3/8/2006 - Feng - Called Harry Godsil and left message if he got the certificate from the city yet. (RJF) 3/17/2006 - Feng - Faxed Harry Godsil a message and inquired the status of the power supply for the remediation system for this site. Requested the contact information if he haven't received the certificate from the city yet, such as contact name, address, phone# and fax#. (RJF) 3/29/2006 - Feng - 3/28/2006 Letter faxed to NYC Department of Buildings - Electrical Division and requested assistance in obtaining the electrical certificate. Called from Inspector Diamond (212)566-3812 saying that they never received any application for that. Emailed Joe Rennie and asked him to look into this problem. (RJF) 4/4/2006 - Feng - Email from DOB Bonnie Gerard. She stated that their inspector visited the site and found some violation. And DOB will be expedite Getty's sub-contractor's application. Feng Forward the violations list to Joe Rennie and strong recommend him to hire another electrican to remove the violation and then to run the system. (RJF) 4/6/2006 - Feng - Email Joe Rennie requested about the status of electrical work for the site. 4/7/2006 - Feng - Email from Joe Rennie I have another electrical contractor working on it. The contractor was in our office on Wednesday and Paul Hatcher and myself spoke to him. He assured us that he will follow up with the NYC DOB. As far as Con Ed goes the paperwork was filed and a case number has been assigned, it's the NYC DOB that doesn't have the necessary paperwork to proceed. (RJF) 5/4/2006 - Feng - Quarterly Monitoring Report, 1/2006 - 3/2006. Active gasoline station and convenience store with car wash. Groundwater at 10.59' to 11.56' bg and flows to east. Sampling and gauging as of 3/21/2006. There are 5 monitoring, 1 monitoring/extraction, 5 extraction wells. W-1, 0.04' FP. W-3, increased and 13,227 ppb BTEX (1,870 ppb B, 6,010 ppb T, 647 ppb E, 4,700 ppb X), 3,180 ppb MTBE. W-4, decreased and 4,651 ppb BTEX (1,750 ppb B, 31 ppb T, 1,050 ppb E, 1,820 ppb X), 1,230 ppb MTBE. W-6, 5 ppb BTEX, 16 ppb MTBE. Noted that absorbent sock in monitoring well (W-1). Electrical contractor waiting on Co Edison and NYC Electrical Control Board for installation approval and final inspection. (RJF) 6/27/2006 - Feng - Dual Phase Extraction System startup. DEC staff Sun, Feng, Andersen, and Krasweski were onsite to witness this event. (RJF) 11/9/2006 - Feng - Quarterly Monitoring Report, 7/2006 - 9/2006, 10/9/2006, by Tyree. Active gasoline station and convienience store with car wash. Sampled and gauged on 9/28/2006. 5 monitoring wells, 1 monitoring/extraction well, and 5 extraction wells. DTW 10.35' to 11.29' bg. Flows to easterly. LNAPL in MW-1, 0.30 feet. BTEX range ND to 17,637 ppb. MTBE range 1 ppb to 2,740 ppb. (RJF) 2/7/2007 - Feng - Quarterly Monitoring Report, 10/2006 - 12/2006, 1/2/2007, by Tyree. Groundwater sampled and gauged 12/27/2006. 5 monitoring, 1 monitoring/extraction and 5 extraction wells. DTW 9.92' to 11.98' bg. Flows east. LNAPL in W-1 (0.12'). W-3, 4,249 ppb BTEX, 700 ppb MTBE. W-4, Not accessible. W-6, BTEX ND, 4 ppb MTBE. (RJF) 5/17/2007 - Feng - New Spill 07-01951 called in. The caller stated that there is product in the monitoring well. Contacted Tyree to see what happened. (RJF) 5/17/2007 - Feng - Rob. S (Tyree) called back and he will send a field technician to the site and gauge those monitoring well. Product will be sampled if any were found in the wells. Will call back tomorrow with the gauging results. (RJF) 5/18/2007 - Feng - Email from Joe Gavin (C2G Environmental

GETTY#58409 (Continued) **S108637243**

Consultants) to DEC Jacob Krimgold. During the Third Party Audit Inspection conducted 5/17/2007, some PBS violation were found and the station has been closed. (RJF) 5/23/2007 - Feng - Email updates from Rob. S (Tyree). A field tech was there yesterday and this morning. One monitoring well with 0.01' of product, the others including the dual phase ones has no product. (RJF) 6/26/2007 - Feng - Quarterly Monitoring Report, 1/2007 - 3/2007, 4/2007. Groundwater sampled 4/2/2007. 5 monitoring wells, 1 monitoring/extraction well, 5 extraction wells. DTW 10.40' to 11.69' bg. Flows to east. LNAPL in MW-1 (0.05'). W-3, 1,618 ppb BTEX, 949 ppb MTBE. W-4, not accessible. W-6, ND. Dual Phase Extraction system running. As of 4/18/2007, Influent 11.6 ppb BTEX and 13.90 ppb MTBE, effluent MDL. (RJF) 9/28/2007 - Feng - Quarterly Monitoring Report, 5/2007 - 7/2007, 8/2007. Groundwater sampled 7/9/2007. 5 monitoring wells, 1 monitoring/extraction well, 5 extraction wells. DTW 10.32' to 11.25' bg. Flows to east. No LNAPL. W-1, 40,412 ppb BTEX, 161 ppb MTBE. W-3, 6,555 ppb BTEX, 2,010 ppb MTBE. W-4, NA. W-6, BTEX ND, 4 ppb MTBE. (RJF) 3/21/2008 - Feng - Quarterly Monitoring Report, 8/2007 - 11/2007, 12/2007. Active gasoline station and convinience store iwth car wash. Groundwater was gauged and sampled 11/8/2007. 5 monitoring wells, 1 monitoring/extraction well and 5 extraction wells. DTW 10.78' to 11.97' bg. Flows to east. LNAPL in MW-1 (0.33'). BTEX range ND to 14,373 ppb (MW-3). MTBE range 3.3 ppb to 1,910 ppb (MW-3). Dual Phase Extraction system has been off line since November due to a pump failure and will be restarted in 12/2007. (RJF) 3/24/2008 - Feng - Email from R. Szcespanski (Tyree). The system is back to service in mid February 2008. (RJF) 7/11/2008 - 1Q2008, 12/2007 - 4/2008, 5/2008. Active gasoline station and convenience store with car wash. Groundwater was gauged and sampled 4/22/2008. 4 monitoring wells, 1 monitoring/extraction, 5 extraction wells. DTW 10.51' to 11.60' bg. Flows to east. LNAPL in W-1 (0.04'). BTEX range ND to 13,950 ppb (W-3). MTBE range ND to 1,760 ppb (W-3). The dual phase extraction system is on. Total BTEX influent ND to 0.93 ppb, MTBE ND to 7.8 ppb. Effluent ND. Email to Tyree for check/evaluate the remedial system and to optimize the recovery. (RJF) 9/4/2008 - Getty Properties portfolio meeting with Delta and Tyree. Some vapor points might be installed in the area where the extraction wels located. Historical data for W-5. Correct the W-2 which is connected to the system. Need well within the property line near the extraction well which is downgradient of W-1. Check why extraction wells were put this way. work plan by 12/2008. (RJF) 1/6/2009 - Getty Properties portfolio meeting with Delta and Tyree. In 2005, there were 5 vapor points along the apartment building and came out clean. DEC received the delineation work plan, and under review. (RJF) 1/23/2009 - Reviewed Investigation Work Plan, dated 12/29/2008, by Tyree. One well is proposed near the vacuum area. DEC provided comments and requires a well to be installed at the extraction wells area as we agreed upon the meeting of 9/2008. (RJF) 1/28/2009 - Received and reviewed the Investigation Work Plan, dated January 27, 2009, by Tyree, pdf copy, sent via email. Tyree proposed to have 2 wells installed. email from Tyree on 1/27/2008, they will measure the water depth and will have proper amount of screen installed, at least 5 feet above water table. Work plan is approved. Field work to be scheduled for 1Q2009. Investigation report due 3/2009. (RJF) 3/17/2009 - Quarterly Monitoring Report, 5/2008 - 7/2008, 8/2008, by Tyree. Active gasoline station and convenience store with car wash. Groundwater was gauged and sampled 7/17/2008. 4 monitoring wells. NO LNAPL. DTW 10.42' to

GETTY#58409 (Continued) **S108637243**

11.90' bg. Flows to east. BTEX range 1.7 ppb to 41,264 ppb (W-1). MTBE range ND to 1,890 ppb (W-3). Dual phase extraction system is on line. BTEX influent ND. MTBE influent range 1.1 to 3.2 ppb. BTEX and MTBE effleuent ND. Quarterly Monitoring Report, 8/2008 - 10/2008, 11/2008, by Tyree. Active gasoline station. Groundwater was gauged and sampled 10/29/2008. 4 monitoring wells. NO LNAPL. DTW 9.98' to 11.89' bg. Flows to east. BTEX range ND ppb to 24,172 ppb (W-1). MTBE range ND to 1,220 ppb (W-3). Dual phase extraction system on line. No BTEX influent or effluent. MTBE influent 2 to 3 ppm, effleuent ND. ((RJF) 6/9/2009 - Reviewed Subsurface Investigation Report, dated 5/13/2009, pdf via email on 5/13/2009, by Tyree. On March 31, 2009, Tyree oversaw Associated Environmenal Services during the installation of 2 monitoring wells. MW-7 and MW-8 were installed to depth of 25 feet bg. PID reading, MW-7 at 10-15 feet, 35 ppm; MW-8 at 10-15 feet 105 ppm. 4 soil samples were collected, MW-7 at 5-10 feet, MW-7 at 10-15 feet, MW-8 at 5-10 feet, MW-8 at 10-15 feet, no exceedances. 2 groundwater samples were collected. MW-7, 36 ug/L benzene, 47 ug/L MTBE. MW-8, 46 ug/L benzene, 340 ug/L MTBE. (RJF) 1/11/2012 - 4Q2011, 1/11/2012, by Tyree. LNAPL in MW-1, 0.01'. High BTEX in one well. MW-3, 9,459 ug/L BTEX, 197 ug/L MTBE. STARS list sampling for E-1, MW-2, E-2, MW-5/E-5. E-1, 58.3 ug/L benzene, 34.7 ug/L MTBE. MW-2, 27.4 ug/L MTBE. E-2, 18.1 ug/L MTBE. 12/13/2011, Dual phase extraction system was on. Liquid phase Influent/effluent are MDL. No vapor phase samples were collected. 07/28/2017 - In January 2017 during the removal of an underground storage tank (UST) system, MES Getty's contractor, excavated soil from the former tank field, former product piping runs and dispensers to remove petroleum impacted soil. During removal activities thirteen previously unknown ghost tanks in the southern area of the site were identified, and subsequently removed in May 2017. From January 9 to July 5, 2017, 43 excavation endpoint soil samples were collected from the sidewalls and bottom of the excavation extents. A review of the laboratory analytical data shows seven excavation soil sample locations at depth exhibiting VOC concentrations in excess of NYSDEC CP-51 soil cleanup guidance, and eight excavation soil sample locations exhibiting SVOC concentrations in excess of applicable NYSDEC CP-51 Soil Cleanup Guidance. All of the excavation soil samples were reported below NYSDEC Brownfield Cleanup Program Commercial Soil Cleanup Objectives, with the exception of SW-8A (7 -7.5), SW-8B (7 -7.5) and SW-8B (14). Approximately 2,268.84 tons of excavated soil was transported off-site for disposal at Soil Safe s facility located in Logan, New Jersey. Based on the above presented information in the July 26th UST Closure and Remedial Excavation Summary Report the spill has been closed."

Remarks: "TANK UNGRADE, FOUND CONTAMINATION. ORIGINAL SPILL ASSIGNED TO O'DOWD."

DEC Memo:	"7/29/16 - obligado - Desk Duty - Duplicate spill report from earlier incident assigned to Mahat. 8/3/16: Mahat DEC Remark for spill

SERVICE BOX (Continued) **S118707075**

1604236: Response: On 7/28/16, DEC Spills staff responded to a reported 30 gallon sidewalk spill in the upper Manhattan at above referenced address. The spill was due to overfill of a 3,000 gallon AST (PBS 2-208396). The # 2 fuel oil was mostly contained within the sidewalk and paved roadways. The tank integrity was not compromised and there was no visible indication of spill in the tank room. A Consolidated Edison service box # 22554 was impacted by the over fill. Con Ed was notified and EMIS # 248976 was generated for the cleanup process. Later, NYC DEP was notified about the spill by the Con Ed field technician. There is no residual oil smell/odor in the building at this time. The road sidewalk and road way spill has be cleaned by the oil company. No other resources was impacted by the spill. The Department does not warrant any further work/investigation on the spill case. EMIS : 248976 [Crossed Referenced] EMIS Remark: MANH Environmental Services Mechanic A Asinto B Muller (05384) reported 3rd Party spill of approx. 120 gallons of unknown oil (most likely fuel oil) entered SB #22554. Crew awaiting COC form, sample jars and env. tag and WR #. Samples to be taken for oil ID, PCB and flashpoint. NYSDEC rep called Desk to inform of spill. Will enter spill number from DEC already reported. Unknown at this time if DEP was notified. Will notify if spill was not reported. COC #HH23601; WR #3545717; Tag #122825 Based on the nature of the spill on the service box, the case is assigned to Con Ed Unassigned. PS. THE ROAD SPILL HAS BEEN CLEANED UP. 9/13/16 - Austin - Con Ed contained and cleaned up this spill - See document files for further information, as well as spill # 1604236 (the original spill, closed on 8/11/16 - Spill closed - end"

Remarks: "Caller advised aprx 120 gal of fuel oil spilled into a service box for con ed. Santosh is aware of the situation. CLean up is pending."

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DER Facility ID:	461172
DEC Memo:	"4/9/15 TJD TTF spreadsheet populated with required information. 4/9/15: Mahat Spill case has been assigned to DEC DeMeo as our discussion. PBS : 2-401935 A TTF letter will be sent momentarily. A failing TT Result has been uploaded on D2 for reference. 11/5/15: Mahat DEC Mahat received a call from retained Contractor [ABC - Donna] informing that she has proposed to remove the tank. Once the tank is removes from the place, end point sample will be taken if necessary. A complete tank closure report will be submitted to DEC DeMeo for closure of the spill. DEC is waiting for closure report. 12/18/15 TJD Closure report has been submitted by ABC Tank. 2500 gallon AST failed tightness test with a reported dry leak on 7/28/15 by another contractor (All Boro). Cause of leak as described on TTF report was a Pre-cut leak on tank top and leaking copper fitting at gauge. Tank was removed from service and (2)temp tanks were installed (Riteway) ABC removed concrete containment and discovered old clean coal with no petroleum impacts. The tank has been removed by ABC and a tank replacement is pending spill closure. Photos and statements made by ABC in closure report indicate no product discharge. All Boro was contacted for an explanation of pre-cut leak - Chris Quintana describes the reported condition as an old cut access (tank cleaning) that was not welded closed but sealed with epoxy that failed. Based upon the documentation provided no further action is required. All documentation has been uploaded to DECDOCS. Spill closed."

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110067701847

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL e2mis no. 153424: R. Mahoney # 97417 Field operator called to report that he found a spill of transformer oil. He states that in Vault 6090 He found 1 pt. of oil that is leaking from a bushing. The oil landed on the floor & is mixed with 8 of dirt & leaves. There is a sewer connection as per plate 59-G. The I&A will be sent down to the location to check the trap. Samples will also need to be taken. Update: 05-17-04 @ 19:00hrs Leardi #13625 inspected the unit and found less than 1 gallon of oil. Transformer is leaking out two spots. Sewer & waterways were not affected. Supv. took to samples, 1-oil id and 1-pcb. Lab Sequence Number: 04-03799-001: TOTAL PCB 12 ppm 07/09/04 17:04 E.Hulser#39723, cable supervisor, notified the control center on 07/09/04 at 16:05 hrs. that the cleanup was complete in V6090 on 07/09/04 at 5:45hrs. This was a final cleanup. V6090 was double washed with slix and a yellow environmental tag was removed. The source of the spill was a leaking transformer, which has been removed and replaced. The cleanup was completed on 07/09/04 at 11:00 hrs."
Remarks:	"about 1 pint of dielecric oil was spilled from the bushing on a faulty transformer. clean up is pending removal of the transformer"

Tank Info:

Tank Number:	001
Tank Id:	44703
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

	A00 - Tank Internal Protection - None
	B01 - Tank External Protection - Painted/Asphalt Coating
	D01 - Pipe Type - Steel/Carbon Steel/Iron
	F00 - Pipe External Protection - None
	H00 - Tank Leak Detection - None
	L09 - Piping Leak Detection - Exempt Suction Piping
	G03 - Tank Secondary Containment - Vault (w/o access)
	J02 - Dispenser - Suction Dispenser
	C03 - Pipe Location - Aboveground/Underground Combination
	I05 - Overfill - Vent Whistle
Tank Location:	Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	Closed - Removed
Pipe Model:	Not reported
Install Date:	01/01/1920
Capacity Gallons:	2000
Tightness Test Method:	NN
Date Test:	Not reported

Tank Info:

Tank Number:	1
Tank Id:	178342
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

ESQUIRE GROUP ESTATES LLC (Continued) **A100291869**

Equipment Records:

L09 - Piping Leak Detection - Exempt Suction Piping
E00 - Piping Secondary Containment - None
G03 - Tank Secondary Containment - Vault (w/o access)
H00 - Tank Leak Detection - None
F00 - Pipe External Protection - None
K00 - Spill Prevention - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
C01 - Pipe Location - Aboveground
I05 - Overfill - Vent Whistle
J02 - Dispenser - Suction Dispenser

Tank Location:	Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	02/01/1981
Capacity Gallons:	5000
Tightness Test Method:	00
Date Test:	Not reported
Next Test Date:	Not reported
Date Tank Closed:	Not reported
Register:	True

FINDS:

Registry ID: 110069672107

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.
